FRANKLIN VALUEMARK FUNDS

ANNIIAI, REPORT

December 31, 1997

When selecting a portfolio, there are two things you may wish to consider: 1) your investment objective; and 2) the degree of risk with which you feel comfortable. Before you make these decisions, you may want to review the investment strategy pyramid pictured to the right. The base of the pyramid represents investments emphasizing stability and preservation of capital. Moving up the pyramid, the categories reflect a greater focus on potential investment return -- categories that generally entail a greater degree of investment risk as well. Of course, you should review the Franklin Valuemark Funds prospectus for more information about a specific option.

TECHNOLOGY UPDATE: FRANKLIN TEMPLETON

COMBATS THE YEAR 2000 PROBLEM

By Charles B. Johnson, President of Franklin Resources, Inc.

As we near the 21st century, Franklin Templeton is taking important steps to tackle the computer glitch dubbed the Year 2000 Problem, Y2K, or the Millennium Bug. The problem originated from the software designers' attempt to save memory by recording years in a two-digit format -- "98" instead of "1998", for example -- but didn't take into account that the year 2000 or "00", could also be interpreted as 1900. Uncorrected, this problem could prevent computers from accurately processing date-sensitive data after 1999.

Franklin Templeton's Information Services & Technology division established a Year 2000 Project Team that has already begun making the necessary software changes to help ensure that our computer systems, which service the funds and their shareholders, will be Year-2000 Compliant. As changes reach completion, we will conduct comprehensive tests to verify their effectiveness. We will also require all of our major software or data-services suppliers to be Year-2000 Compliant.

In addition, with an estimated 80% of businesses facing the Year 2000 Problem, mutual fund portfolio managers must be aware of the impact it could have on companies in their portfolios. That's why Franklin Templeton portfolio managers consistently keep this issue in mind while selecting investments and managing their portfolios.

LETTER TO CONTRACT OWNERS

Dear Contract Owner:

If there is one single word that can sum up global market conditions in 1997, it has to be "volatility." Though benign inflation and declining interest rates led to strong economic activity, in one of every three trading days in 1997 the Dow Jones (R) Industrial Average rose or fell by 1% or more. Even so, many financial assets rose in value, with returns surpassing historical levels, and the Dow reveled in a meteoric rise. Knowing that no securities market can advance forever, many investors were asking, "When will this market correct?"

The answer came on October 27, 1997. Prior to this date, much of the volatility of 1997 was rooted in the financial troubles of several Southeast Asian nations, culminating in a series of currency devaluations. On July 2, 1997, Thailand threw in the towel and let the markets determine the value of its currency. This action was quickly followed by similar currency devaluations in Malaysia, the Philippines and Indonesia. By Halloween week, the mighty roar of the Asian "Tigers" dwindled to a sickly meow as Hong Kong's Hang Seng Index experienced a 5.8% drop on October 26th. The effect was widespread: the Dow tumbled 554 points

(or 7.2%), the largest percentage decline since "Black Monday" 1987. In Brazil, where the equity market had been up 70% for the year, the index plummeted 15% in a knee-jerk reaction to the drop on Wall Street. The European stock markets also reacted, coming off anywhere between 2% and 6% the following day.

Though the outlook for the Asian economies is uncertain at this time, we anticipate that their woes implicate slower growth in the U.S. To begin with, the rash of currency devaluations in Asia signifies an erosion of purchasing power there. Consumers in those nations may no longer be able to afford as many American products as in the recent past -- it now takes significantly more of their local currency to equal one U.S. dollar. As American products have now become relatively expensive to Asian consumers, there could very well be a drop in U.S. exports to that region. On the other hand, this also means that products from these Asian countries will be cheaper for American consumers. This drop in the prices of some goods implies a lessening of inflationary pressures in the U.S.

The crucial issue is to what extent the U.S. economy will be affected by the Asian slump. Will it merely take the steam out of inflationary pressures simmering just below the surface, or is it enough to initiate a spiral of deflating prices? It is interesting to note that the authorities in the U.S. —such as the Federal Reserve Board — still have a fair amount of flexibility to handle the threat of deflation from Asia. We believe that low inflation, a strong dollar and a low budget deficit mean that interest rates can be lowered further and taxes could be cut to stimulate demand.

In other parts of the world, the Asian crisis is also forcing emerging markets governments to tackle significant structural reforms. This is particularly true in Brazil, where the Real Plan has been successful in temporarily achieving relative price stability and positive economic growth. However, as shown by the experience in Asia, fixed exchange rate policies are not a good long-term solution, and major structural reforms are required to maintain economic stability. Important reforms are currently being discussed, but we think these are unlikely to be implemented during 1998.

It is important to remember, then, that securities markets can and will correct -in our opinion, it is desirable for them to do so. No one is able to predict exactly how they will perform in the future. For this reason, we urge you to exercise patience and focus not on short-term market movements, but on long-term investment goals.

Regardless of the market's direction, Franklin Templeton's disciplined investment strategy remains the same: all of our portfolio managers are dedicated to providing you with careful investment selections, broad diversification, and constant, professional supervision. As always, we appreciate your support, welcome your questions and comments, and look forward to serving your investment needs in the years ahead.

Sincerely,

Rupert H. Johnson, Jr. /s/Rupert H. Johnson, Jr. Director and Vice President Franklin Valuemark Funds

PORTFOLIO OBJECTIVES AND RISKS

A WORD ABOUT RISK

All of the portfolios are subject to certain risks. Generally, investments offering the potential for higher returns are accompanied by a higher degree of risk. Stocks, and other equities representing an ownership interest in a company, have historically outperformed other asset classes over the long term, but tend to fluctuate more dramatically over the shorter term. Bonds and other debt obligations are affected by changes in interest rates and the creditworthiness of their issuers. High yield, lower-rated ("junk") bonds generally have greater price swings and higher default risks. Foreign investing, especially in developing countries, has additional risks such as changes in currency values, market price swings, and political, economic or social instability. These and other risks to which particular portfolios may be subject—such as specialized industry sectors or use of complex securities—are discussed in the prospectus.

PORTFOLIOS SEEKING CAPITAL GROWTH

PORTFOLIO DESCRIPTION

CAPITAL GROWTH FUND

Seeks capital appreciation with current income as a secondary consideration. The portfolio invests primarily in U.S. equity securities, including common stocks and securities convertible into common stocks.

MUTUAL DISCOVERY SECURITIES FUND

Seeks capital appreciation by investing in U.S. and foreign equity securities, including common and preferred stocks and securities convertible into common stocks, as well as debt obligations of any quality. The portfolio also seeks to invest in securities of domestic and foreign companies involved in mergers, consolidations, liquidations and reorganizations.

NATURAL RESOURCES SECURITIES FUND* (FORMERLY PRECIOUS METALS FUND) Seeks capital appreciation through concentration of its investments in securities of U.S. and foreign issuers that produce, refine, process, or market natural resources as well as those that provide support services for natural resources companies. The portfolio's secondary objective is to provide current income return through the receipt of dividends or interest from its investments. Lower-rated and similar non-rated securities, commonly known as "junk bonds," have higher credit risks and may have greater price movements. Foreign securities involve special risks, including currency fluctuations and political uncertainty; developing markets involve higher risks. *Effective May 1, 1997, the Precious Metals Fund's name changed to the Natural Resources Securities Fund.

SMALL CAP FUND

Seeks long-term capital growth. Under normal market conditions, the portfolio invests primarily in equity securities of small capitalization growth companies. The portfolio may also invest in foreign securities, which involve special risks. Small company securities may have greater price swings than mid-sized or large company securities.

TEMPLETON DEVELOPING MARKETS EQUITY FUND

Seeks long-term capital appreciation. The portfolio seeks to achieve this objective by investing primarily in equity securities of issuers in countries having developing markets. The portfolio is subject to special and higher risks related to foreign developing markets, including changes in currency values, market price swings, and economic, social, and political developments in the countries where the portfolio.

TEMPLETON GLOBAL GROWTH FUND

Seeks long-term capital growth; any income realized will be incidental. The portfolio seeks to achieve its objective through a flexible policy of investing in stocks and debt obligations of companies and governments of any nation, including developing. Investments in foreign securities involve special risks including changes in currency values, market price swings, and economic, social, and political developments in the countries where the portfolio is invested. Developing markets involve similar but higher risks.

TEMPLETON INTERNATIONAL EQUITY FUND

Seeks long-term capital growth. Under normal market conditions, the portfolio will invest at least 65% of its total assets in an internationally diversified portfolio of equity securities. These equity securities will trade on markets in countries other than the U.S., including developing markets, and be issued by companies domiciled in countries other than the U.S., or companies that derive at least 50% of either their revenues or pre-tax income from activities outside the U.S. Investments in foreign securities involve special risks including changes in currency values, market price swings, and economic, social, and political developments in the countries where the portfolio is invested. Developing markets involve similar but higher risks.

TEMPLETON INTERNATIONAL SMALLER COMPANIES FUND

Seeks long-term capital appreciation. The portfolio seeks to achieve this objective by investing primarily in equity securities of smaller companies outside the U.S., including developing markets. Investments in foreign securities involve special risks including changes in currency values, market price swings,

and economic, social, and political developments in the countries where the portfolio is invested. Developing markets involve similar but higher risks. Small company securities may have greater price swings than mid-sized or larger company securities.

TEMPLETON PACIFIC GROWTH FUND

Seeks long-term capital growth. Under normal conditions, the portfolio will invest at least 65% of its assets in equity securities which trade on markets in the Pacific Rim, including developing markets, and which are issued by companies domiciled in the Pacific Rim or companies that derived at least 50% of either their revenues or pre-tax income from activities in the Pacific Rim. For purposes of the portfolio's 65% investment policy, the countries in the Pacific Rim include Australia, China, Hong Kong, India, Indonesia, Japan, Korea, Malaysia, New Zealand, Pakistan, the Philippines, Singapore and Thailand. The portfolio invests primarily in a single geographical region of largely developing foreign markets and could experience significant changes in share price in any given year.

PORTFOLIOS SEEKING GROWTH AND INCOME

DESCRIPTION

GROWTH AND INCOME FUND

Seeks capital appreciation. The portfolio's secondary objective is to provide current income return. The portfolio pursues capital appreciation by investing primarily in U.S.] common stocks, securities convertible into common stocks and preferred stocks.

Income Securities Fund

Seeks to maximize income while maintaining prospects for capital appreciation. The portfolio will pursue its objective by investing in a diversified portfolio of domestic and foreign (including developing markets) debt obligations, which may include high yield, high risk, lower-rated bonds, as well as equity securities, selected with particular consideration of current income production along with capital appreciation. Lower-rated and similar non-rated securities, commonly known as "junk bonds," have higher credit risks and may have greater price movements. Foreign securities involve special risks, including currency fluctuations and political uncertainty; developing markets involve higher risks.

MUTUAL SHARES SECURITIES FUND Seeks capital appreciation with income as a secondary objective by investing in equity securities, including common and preferred stocks and securities convertible into common stocks, as well as debt obligations of any quality. The portfolio may also invest in foreign securities which involve special risks. Small company securities may have greater price swings than mid-sized or large company securities.

REAL ESTATE SECURITIES FUND Seeks capital appreciation, with a secondary objective of earning current income on its investments. The portfolio pursues its principal objective by concentrating in securities of companies in the real estate industry, primarily equity real estate investment trusts (REITs). By investing primarily in a single industry, the portfolio will be more affected by unfavorable developments or market downturns in that industry than a more diversified portfolio.

Rising Dividends Fund

.____

Seeks capital appreciation and current income incidental to capital appreciation. In seeking capital appreciation, the portfolio invests with a long-term investment horizon. Preservation of capital is also an important consideration. The portfolio seeks its objectives by investing at least 65% of its net assets in financially sound companies that have paid consistently rising dividends based on the investment philosophy that the securities of such companies have a strong potential to increase in value.

TEMPLETON GLOBAL ASSET ALLOCATION FUND

Seeks a high level of total return through a flexible policy of investing in the following market segments: equity securities of issuers of any nation, debt obligations of companies and governments of any nation, and Money Market Instruments. The mix of investments among these three asset classes will be adjusted in an attempt to capitalize on total return potential produced by changing economic conditions throughout the world. Investments in foreign securities involve special risks including changes in currency values, market price swings, and economic, social, and political developments in the countries where the portfolio is invested. Developing markets involve similar but higher risks.

UTILITY EQUITY FUND

Seeks both capital appreciation and current income by concentrating investments in the securities of companies in the public utilities industry. The portfolio pursues its objective by investing at least 65% of total assets in securities of issuers engaged in the public utilities industry, which includes the manufacture, production, generation, transmission and sale of gas and electric energy and water. Assets may also be invested in issuers engaged in the communications field, including entities such as telephone, telegraph, satellite, microwave and other companies providing communication facilities for the public benefit. The portfolio may also invest in foreign securities, which involve special risk considerations, including currency fluctuations and political uncertainty; developing markets involve similar but higher risks. Because the portfolio may invest in relatively few issuers, changes in the value of a particular issuer, interest rate movements, changes in currency

values and other risks of foreign investing may have a greater effect on the portfolio's results.

PORTFOLIOS SEEKING CURRENT INCOME

PORTFOLIO

DESCRIPTION

HIGH INCOME FUND

Seeks a high level of current return. As a secondary objective, the portfolio seeks capital appreciation to the extent consistent with its principal objective. The portfolio may invest in both debt obligations and dividend-paying common or preferred stocks, including high risk \ securities, and will seek to invest in whatever type of investment is offering the highest yield and expected total return without excessive risk at the time of purchase. Lower-rated and similar non-rated securities, commonly known as "junk bonds," have higher credit risks and may have greater price movements.

TEMPLETON GLOBAL INCOME SECURITIES FUND

Seeks high current income, consistent with preservation of capital, with capital appreciation as a secondary consideration. The portfolio will pursue its objectives by investing at least 65% of its net assets in both domestic and foreign debt obligations including those in developing markets and related foreign currency transactions. The portfolio may invest in relatively few issuers; therefore, changes in the value of a particular issuer, interest rate movements, changes in currency values and other special risks of foreign investment may have a greater effect on the portfolio's results.

U.S. GOVERNMENT SECURITIES FUND Seeks to earn income through investments in a portfolio limited to securities which are obligations of the U.S. government, its agencies or instrumentalities. These obligations may include fixed-rate or adjustable-rate mortgage backed securities. Individual securities, but not shares of the portfolio, are guaranteed by the U.S. government as to timely payment of principal and interest.

THREE ZERO COUPON FUNDS

Seek to provide as high an investment return as

(MATURITY DATES: SEEKS TO 2000, 2005, 2010) is consistent with the preservation of capital. Each portfolio return a reasonably assured targeted dollar amount, predictable at the time of investment, on a specific target date in the future by investing primarily in zero coupon securities that pay no cash income but are acquired by the portfolio at substantial discounts from their value at maturity. In response to interest rate changes, zero coupon securities may experience greater changes in market value than interest-paying securities of similar maturity. The portfolios may not be appropriate for short-term investors or those who intend to withdraw money before the maturity date.

PORTFOLIO SEEKING PRESERVATION OF CAPITAL AND INCOME

PORTFOLIO DESCRIPTION

Money Market Fund

Seeks to obtain current income consistent with capital preservation and liquidity. An investment is neither insured nor guaranteed by the U.S. government. The portfolio will seek to maintain a \$1 per share net asset value, but there is no guarantee that it will be successful in doing so.

PORTFOLIO SUMMARIES

You may find a complete listing of the portfolio's securities holdings including the number of shares and dollar value beginning on page 62 of this report.

PORTFOLIOS SEEKING CAPITAL GROWTH

CAPITAL GROWTH FUND

The most notable event that occurred over the reporting period was the situation that unfolded in Asia with a torrent of currency devaluations, resulting in some significant turbulence in global equity markets. The effects of the Asian problem will have ramifications on economic growth in countries throughout the world, including the United States. While the magnitude of this effect won't be apparent for some time, various estimates by economists suggest the impact might be approximately 0.5% of U.S. gross domestic product (GDP). Prior to the events in Asia, estimates of GDP growth for 1998 were in the range of about 3 - 3.5%, but new estimates are now in the range of 2.5 - 3%. Although various economic scenarios could result from the fallout from Asia, one certainty is the slowdown in overall corporate profits here in the U.S.

We believe that the Capital Growth Fund, while not completely immune to this slowing growth, is positioned in such a way that it will hopefully weather the volatility better than the overall market. Based on next year's earnings estimates, the portfolio's weighted average price/earnings multiple is less than the market's, but the weighted average estimated earnings growth of the portfolio holdings is much better than the overall market's. With that said, though, it should be pointed out that the portfolio's over-weighting in technology stocks does lead to periods of disruption from time to time. This was especially true this past fall when concerns over Asia had a more pronounced effect on such stocks than on the broader markets. However, it is our belief that this sector will continue to provide tremendous opportunities for the growth of capital in the years ahead.

Our focus during the year in the technology sector included the addition of two companies in the software group, Parametric (a mechanical design automation company) and Computer Sciences (a data services firm). These companies have much greater exposure to the European nations (an area we think has good prospects) as opposed to Asia, and are clear leaders in their respective markets, enjoying fairly high returns on capital deployed in the business.

A number of the portfolio's positions performed very well during the reporting period, including Charles Schwab (a diversified financial services firm), AES (an independent power producer, with projects worldwide), Wal-Mart (a major retailer), Compaq (a leading computer hardware firm), Southwest Airlines (a regional airline), and Robert Half International (a temporary staffing business), to name a few.

At the same time, during any given period there will be a variety of companies that do not perform up to expectations for near-term results. Such was true with companies like 3Com (an undisputed leader in the fast-growing data-networking space), Xilinx (a leading provider of custom-programmed semiconductors), Nike (arguably the world's number-one shoe company), and Oracle (a leading software developer of database management systems). In each individual case, our respective industry analyst, in conjunction with our team of portfolio managers,

analyzes the long-term growth prospects of the company relative to an assessment of valuation. Unfortunately, near term volatility can be disruptive to one's focus on the long-term growth of capital. In the management of your portfolio, we try not to lose sight of the long term during the day-to-day volatility. Instead, we view volatility as an opportunity to purchase what we may deem to be the stocks of outstanding businesses at reasonable valuations.

Our overall outlook for the domestic stock market remains bullish over the long-term for a variety of reasons. First, there remains the demographic trend of the aging "baby-boom" generation, fostering greater awareness towards investing for retirement. Another major reason for our optimism with the market is that, as we live in an ever-increasing global economy, many domestically domiciled firms, with an enhanced focus on shareholder value and improving profitability, are proving to be highly productive on a worldwide basis. We believe that this favorable trend will persist for some time.

MUTUAL DISCOVERY SECURITIES FUND

The Mutual Discovery Securities Fund seeks capital appreciation by investing primarily in domestic and foreign equity securities. These include common and preferred stocks, securities convertible into common stocks, as well as debt obligations of any quality. On December 31, 1997, 79.5% of the portfolio's assets were invested in equity securities, 3.4% in fixed-income securities, and the remaining 17.1% in short-term and other securities. Of course, these holdings will change as conditions warrant.

Many stock indices were delivering astronomical returns during the first half of 1997 (the S&P $500\,(R)$ gained more than 20%1), tempting some investors to jump in and ride the market with an index fund. However, we believe that our value approach is a better way to achieve consistent, long-term appreciation with relatively low risk and low volatility. Even though indexing could lead to greater returns over a specific time period, this could place the investor on a perilous journey to mediocre returns and high volatility when market conditions are less favorable. The mix of our investments -- cheap stocks, bankruptcies, and special situations such as mergers and spin-offs -- is intended to provide the best risk-adjusted returns in a wide variety of market conditions.

1. Source: Bloomberg. Index is unmanaged and includes reinvested dividends.

It has become increasingly difficult of late to find cheap stocks, especially in the domestic market, as investors look to "buy the dips" and are willing to buy stocks at historically high valuations. As a result, most of the large names that dominate indices such as the S&P 500 currently trade at valuations that do not fit our investment strategy. But cheap buys still exist. In the U.K., investors embraced the privatization of Railtrack, realizing the importance of lessening the burden of government regulation.

We continue to find good value in the European markets, particularly in the smaller and mid-cap stocks rather than the large cap stocks. This year will be an exciting one in Europe given the scheduled, albeit somewhat limited, introduction of the eurocurrency on January 1, 1999. Direct Pacific Rim exposure was virtually non-existent at year-end, but we are now looking to see whether the recent carnage has created an opportunity for us within the context of our usual investment parameters.

We also anticipate that the markets will present us with many opportunities over the next year. For instance, it appears that many investors have largely ignored the fact that some companies may not achieve analysts' aggressive earnings estimates. In particular, the "Asian flu" may have a greater ripple effect on some companies than the market has reflected. The merger and acquisition environment as well as divestiture activity continues to be strong. Even so, we will not "push the envelope" and increase the risk profile of our portfolio.

NATURAL RESOURCES SECURITIES FUND (FORMERLY PRECIOUS METALS FUND)

The year under review saw periods of heightened market volatility, especially for the natural resources sector. Three main factors contributed to the increased volatility. First, despite favorable fundamentals, the energy sector was negatively impacted by fears of a warm winter season and a higher OPEC production quota combined with increased Iraqi output. A wave of profit taking only served to magnify the correction at year-end. Another significant cause of volatility was the currency turmoil in Asia, which negatively impacted commodity-related companies as fears of a global economic slowdown surfaced. Finally, a perceived lack of inflation created a psychological overhang in numerous sectors, including steel, forest products, gold and base metals.

Despite the potential for continued volatility, our outlook for 1998 remains positive. We believe the portfolio is well positioned to take advantage of sector volatility, as we shift our focus among various sectors while concentrating on specific company drivers. The portfolio continues to invest in well-managed companies with fast-growing, highly efficient, technologically advanced operations throughout the energy, mining, steel, chemicals, forest products and related service industries. We do not purchase investments based solely on the assumption that commodity prices will rise. Rather, we invest in companies that we believe will fare well even in a flat-to-declining commodity price environment, due to rapid production growth, asset or technological edge and/or lower costs.

We anticipate a favorable environment for the energy sector, particularly in exploration, production and oil field service companies. The portfolio therefore maintains its 50%+ exposure to this group, although that can change. Exploration and production companies should offer significant upside potential as additions to reserves and production impact the bottom line. Even with flat to declining energy prices, many companies should witness a doubling of production over the next several years, as well as significant reserve additions. We maintain our focus on industry leaders who should benefit from a balanced strategy of lower-risk development drilling and higher-risk, exploration potential. In the oil field services and equipment sector, supply and demand fundamentals continue to support above average earnings and cash flow growth, and capital expenditure budgets remain steady. Replacement costs and technological barriers impede new competition, while industry fragmentation will only add fuel for the dominant players through consolidation.

During 1997, the price of gold bullion slid below \$300 per ounce, negatively impacting the portfolio's holdings in the precious metals sector. In the face of European Union convergence, strong equity markets and virtually nonexistent

inflationary pressures, many central banks proceeded to sell off their gold reserves. Later in the year, Asian demand suffered a steep decline stemming from the currency crises there. These factors adversely affected investor sentiment, despite positive physical demand fundamentals. Short-side and aggressive options selling also conspired to depress the gold price further. Over the longer term, we continue to view the resilient physical demand (especially from developing countries) and stable mined supply as attractive, and therefore remain optimistic that gold will eventually appreciate in value.

Several niche sectors performed strongly during the year, including the offshore segment of the oil field services and equipment industry. Oil field services and equipment companies provide the equipment, technology, and often the know-how for the upstream sector to carry out the exploration, development and production of oil and natural gas. In part, the desire to reduce costs and improve the efficiency of exploration and production drives the demand for services and equipment. Technology and superior assets play a significant role in the industry due to the direct impact companies can have on the success of their customers. Recent advancements in technology including 3-D seismic, subsea production, and automated drilling systems have opened up new areas of the world to oil and natural gas exploration. In particular, deep water offshore areas have been relatively unexplored to date and offer significant opportunities for the upstream sector. Diamond Offshore Drilling, Inc. and Varco International, Inc. are two portfolio holdings that we believe are ideally suited to benefit from the current trends in this arena.

Diamond Offshore is a leading provider of offshore contract drilling with one of the newest, most technologically advanced fleets in the world. The company's fleet includes 30 semi-submersibles, 15 jack-ups, and 1 drill-ship, 6 of which are capable of drilling wells nearly a mile beneath the sea. We believe that continued interest in deep water exploration will keep the demand for Diamond's premium rigs strong, allowing earnings to grow at a rate in excess of 50% per year over the next two years. Similarly, Varco is a leading manufacturer of products to improve the safety and productivity of the drilling process. Varco's focus on the offshore drilling fleet should position the company to benefit from the upgrade of existing rigs and the construction of new offshore rigs. The company's extensive experience and commitment to research and development has enabled them to create an advanced product line which includes top drives, automated pipe handling equipment, and leading-edge rig control systems. Despite the company's impressive growth outlook (estimated at 40% per annum) over the next three years and leading industry position, at the time this report was written, the shares traded at a discount to the earnings multiple of the Standard & Poor's 500(R) Stock Index.

In closing, we believe that as we enter 1998, many natural resources industries offer attractive risk/reward profiles when compared to the overall equity market. Our focus will continue to be on companies expected to benefit from superior growth prospects which are trading at attractive valuation levels relative to their industry peers and the overall market.

SMALL CAP FUND

Amidst favorable economic conditions, the U.S. equity markets performed well for the third consecutive year, reaching new highs during the period ended December 31, 1997. On a relative basis, larger capitalization stocks performed better than small cap stocks throughout the year, in part due to investors entering more liquid securities as a refuge from market volatility. Economic and currency deterioration throughout Asia weighed heavily on the markets in the fourth quarter, and certainly contributed to the increased volatility.

Notwithstanding the recent large-cap bias of the market, we remain bullish on the small cap sector, and are finding no shortage of attractively priced growth stocks. Despite recent weakness in the technology and energy sectors, the portfolio has maintained much of its exposure in these areas, which we think will provide excellent long-term growth opportunities. Our largest single position is Varco International, Inc., a rapidly growing provider of equipment for off shore, deep water drilling rigs. Varco should benefit from ongoing capital spending by the large oil and gas companies. We are also optimistic about several names in the technology service sector, including Synopsys, Inc., a maker of design automation software for use in the production of semiconductor

chips, and Affiliated Computer Services, Inc., a leading provider of information processing services.

Throughout the year, we took advantage of the market volatility to sell certain positions that, in our opinion, were fundamentally overvalued. During the year, we reduced our stake in Labor Ready, Inc., a temporary employment company, and liquidated our position in Adaptec, Inc., a maker of hardware and software that increases the speed of data transmission. In addition, we took profits in two semiconductor names, Linear Technology and Altera Corp., due to concerns about declining growth rates.

Going forward, we continue to believe that the prospects for small cap stocks are excellent. Relative valuations for small caps remain below historical averages, and most small companies have little exposure to overseas markets, limiting the impact from any Asian turmoil. The domestic economy remains strong, and there appears to be little threat of inflationary pressure. We believe these conditions provide the opportunity for small caps, and the portfolio in particular, to provide attractive returns over the long term.

TEMPLETON DEVELOPING MARKETS EQUITY FUND

While six months ago we reported strong gains in emerging market equity prices, underpinned by high capital inflows from developed market countries, we have since witnessed the development of a major currency and equity market crisis in emerging market countries.

The main crisis began with the devaluation of the Thai baht in July 1997, then spread to most of Asia and on to other emerging markets around the world. The devaluation of currencies had a domino effect on the equity markets of the region because so many companies and governments had borrowed U.S. dollars heavily, attracted by the low dollar interest rates being offered during the last few years. Having been assured by their governments that the exchange rates of their local currencies against the U.S. dollar would not change, these borrowers assumed little or no currency risk. The contagion effect of falling currencies thus had a disastrous impact on the cost of paying back the U.S. dollar loans, putting many companies into bankruptcy and thus affecting the banking systems in those countries. The rush for cash then consumed equity market prices in a wild melee of selling, the likes of which has not been seen for many years. As of December 31, 1997 the Thai market was down 88% in U.S. dollar terms from its all time high. Enormous falls from all time highs have also been seen in Korea (-83%), Malaysia (-69%), and Pakistan (-54%).2 Many other countries in Asia have seen equity prices fall by more than 50% from all time highs. This growing crisis has naturally had an adverse effect on the performance of the portfolio.

2. Source: Bloomberg.

Although it held out for quite some time, even Hong Kong's equity market eventually fell victim to the Asian virus. Hong Kong stocks fell by nearly 30% in October, precipitating a sell-off in both emerging and developed markets around the world.3 Such a dramatic drop in a market regarded as a safe-haven was surprising. It was brought about by a vigorous speculative attack on the Hong Kong dollar peg to the U.S. dollar, which sent overnight inter-bank rates in the Special Administrative Region soaring. Although the speculative pressure has now eased somewhat, the Hong Kong government faces a dilemma. If it continues to peg its currency to the U.S. dollar, it risks further speculative attacks and upward pressure on interest rates. This has already had an impact on the local stock market that was accompanied by declines in property prices. Of course, there are dramatic implications for a banking sector in Hong Kong heavily geared towards the property sector. In light of this, Moody's Investors Service downgraded the outlook for Hong Kong banks from positive to negative. If, on the other hand, the government floats the Hong Kong dollar, it risks spiraling inflation and pushing the economy into recession. A difficult choice, to be sure, but given the underlying health of the economy we believe that the government has made the right decision in sticking to its U.S. dollar peg. In our opinion however, inflation will have to come down over the long term in Hong Kong to a level well

below that of the U.S., or the currency peg will need to be abandoned.

3. Source: Bloomberg. Price depreciation measured in Hong Kong dollars.

Despite such a large drop in the stock markets of developing countries, there is no need to panic. History has shown that the best time to buy stocks is when prices have suddenly and dramatically declined. We believe the crisis has created some exceptional opportunities in markets and individual stocks that were previously overvalued. Many stocks in markets such as Thailand are ridiculously cheap at current levels. That is not to say that they will not fall any further; rather, we think that they represent excellent opportunities for long-term investors. Having swallowed the bitter medicine of devaluation, many of the countries in Asia are well placed for an export-led recovery despite higher imported raw material costs. The crisis has also forced many governments to address some much needed structural changes and exercise a good deal more fiscal restraint. To take advantage of these opportunities, we have been selling in Latin American and Eastern European markets that have been less affected by the crisis and buying in Asia where prices have been most affected.

By the end of 1997, the portfolio had less than 10% of total net assets held in cash reflecting the exceptional number of buying opportunities that we have been able to locate. In contrast to many top-down portfolios that are holding very high cash levels we are close to being fully invested. This is consistent with our methodology of buying when other people are selling and when we find good value. We are confident that from a five-year perspective, the portfolio contains some exceptional bargains. Our largest holding remains Brazil, which accounts for 11.5% of the portfolio. The proportion of the portfolio held in Thailand has risen from 2.2% one year ago to 5.1% as of December 31, 1997.

Templeton Global Growth Fund

With regard to the portfolio, exposure to any industry or country is merely a consequence of where we uncovered undervalued companies around the globe. Over the course of the year, the outcome of that search for bargain stocks led to two major changes in the portfolio's country weighting. The first was a decline in the exposure to the U.S. market, which represented about 23% of the portfolio's total net assets on December 31, 1997, compared with 29.1% at the end of last year. Quite simply, it has grown increasingly difficult for us to find undervalued investments in America, and a number of our holdings at the beginning of the year have appreciated to levels that we feel fully reflect the company's long-term fundamentals. As a result, we have sold our positions in financial stocks such as Merrill Lynch, Fannie Mae and Citicorp. We did add to newer bargain investments including IBP, Inc., a meat packaging company, and AT&T, the long distance telephone provider.

The market has not suffered a meaningful decline in over 10 years, and --overall -the U.S. market today sells at a high earnings multiple with near record low dividend yields and record-high price-to-book value. Long-term earnings expectations are at near-record highs as investors appear to be projecting the past six years of strong growth onto the future. Yet, much of the past earnings were achieved through lower taxes and interest expense that may be difficult to repeat going forward. This is especially true in an environment where pricing remains difficult, and the American consumer is burdened with substantial levels of debt. While these observations are of little value in predicting a decline, we have never made it a practice of trying to time markets. Instead, we try to invest in companies where share prices are well below our opinion of their intrinsic values, based on the long-term fundamentals. For these reasons, it is more difficult to find such companies in the U.S. today.

The second noticeable shift in the portfolio's country weightings was the doubling of our exposure to the U.K. In Britain, we are finding higher dividend yields and lower share prices relative to earnings when comparing British companies with their competitors around the world. Among the new additions to the portfolio are Courtaulds Plc., a chemical manufacturer, and National Grid Holdings Plc., the operator of the country's electricity transmission grid. In

continental Europe, strong share price appreciation helped our performance but has also pushed up valuations. We have therefore reduced our exposure to banks in Sweden and Spain. Many of the companies we continue to hold in the region are those that have not yet fully realized the benefits of restructuring.

While the market declines in China and Hong Kong have certainly hurt our performance, we began the year with about 9% of the portfolio's total net assets in Asia and have been underweight in the region for some time because of generally high valuation levels. Recent events have provided a welcome opportunity to increase our Asian holdings. We are not ignoring the risks and problems that the region faces, but are systematically and rationally determining when undue concerns are reflected in share prices. This was the approach we took after the Mexican peso crisis when we invested in South American companies. As was the case in South America, oftentimes we are initially too early and this may prove to be the case with some of the stocks we are now cautiously buying in Asia. However, laying the foundation for future long-term performance requires both fortitude and patience.

TEMPLETON INTERNATIONAL EQUITY FUND

The primary reason for the portfolio's level of performance this year was its absence from the poorly-performing Japanese market as well as a relatively light weighting in Southeast Asia in general. European markets, where the majority of the portfolio's assets were invested, achieved attractive returns for equity investors. These returns, however, were somewhat offset by the dollar's strength versus many European currencies.

Toward the end of 1997, investors began to focus on Asia, as many of the currency and stock markets were in the throes of severe disruptions. Fortunately for the portfolio's shareholders, we had very low weightings in this region. Accordingly, the direct impact on the portfolio of these markets' collapsing values was rather limited. On December 31, 1997, less than 4% of the portfolio's total net assets were invested in Asia. With share prices in this region falling to distress levels, we are scouring the Asian stock markets for opportunities to purchase bargain-priced stocks. Finding stocks that have both healthy balance sheets and the possibility of rebounding strongly from the current Asian economic malaise has proven challenging thus far. As share and currency values continue to fall, however, we anticipate that our holdings in Asia will rise --perhaps significantly.

Concerns over events in Asia also impacted share prices in Latin America, with the Brazilian market suffering the most significant damage. This occurred when fears surfaced that the excesses being uncovered in Asia might also be found in Brazil. Many investors became concerned that Brazil might be forced to devalue its currency which, in turn, might lead to a collapse of share values due to rising dollar-denominated debt on corporate balance sheets. In fact, Brazilian corporations generally have little debt, and the recipe for financial disaster in Asia of property speculation and mis-allocated capital spending does not exist in Brazil. Consequently, we took the opportunity to significantly increase our holdings of Brazilian shares when that market sold off sharply based on fears of Brazil's catching the "Asian flu." We added to our positions in Unibanco (Uniao de Bancos Brasileiros) and Telebras (Telecomunicacoes Brasileiras), and established new positions in Electrobras (Centrais Electricas Brasileiras) and Petrobras (Petroleo Brasileiro). Because the Brazilian government responded aggressively with appropriate policies to the growing concerns about its currency, it was able to stave off devaluation. This impressive performance was quickly rewarded with a sharp rebound in share prices starting in mid-November. Should Latin American stocks suffer any further declines as a result of the global economic concerns, it is possible that we would seek to increase our holdings further. We expect the longer-term economic performance of the region to respond positively to the privatizations and economic reforms being implemented in many Latin American countries.

The portfolio's substantial exposure to European equities contributed greatly to its performance during the year. Most European markets performed very well in 1997, and many of the shares the portfolio held benefited from this bullish

trend. Our largest exposure in Europe, and indeed in the portfolio in general, is in the United Kingdom, where we identified many stocks selling at prices that we considered low in relation to the earnings these companies may achieve in the longer term. On December 31, 1997, 22.4% of the portfolio was invested in U.K. equities. Recently, we added positions in ICI, Storehouse, and General Electric to our U.K. holdings. Sweden also features prominently in our European exposure, comprising 5.5% of the portfolio's total net assets. We have been reducing our cyclical exposure in the portfolio as of late, and this has resulted in selling some of the portfolio's Swedish positions. Many cyclical shares, particularly those in Europe, may be negatively affected by excess supply from depressed and low-cost Asian countries. Companies such as Solvay, Arbed, Pechiney and Renault are some of the European cyclicals that have been eliminated from the portfolio during this process. As the portfolio is currently structured, it is slightly underweighted in European equities relative to the MSCI-EAFE Index and is particularly underweighted in Germany, France and Switzerland. These three countries have performed very well in recent years and it is becoming difficult to identify bargain priced stocks there.

We believe the outlook for international equities over the longer term is bright. Many of the difficult issues now facing Asian economies will result in changes that will enhance the possibility of achieving attractive long-term investment returns. As trade and labor markets move in the direction of greater freedom, governments withdraw from interfering in industrial policy decisions and companies rely more heavily on signals from the capital markets in setting expansion plans, better corporate earnings performance should be achieved. In the short term, the process of moving toward these ideals can result in volatile markets. Accordingly, by December 31, 1997, the portfolio had built up its cash reserves to 20.6% of total net assets in anticipation of deploying these funds as outstanding bargains materialize.

Templeton International Smaller Companies Fund

Throughout the year, the portfolio, using a disciplined focus on long-term value, continued its endeavor to purchase the shares of undervalued, small-cap companies outside the U.S. As of December 31, 1997, the portfolio had over \$32 million in assets under management and was invested in 36 countries.

Our European positions contributed significantly to the portfolio's performance over the past year. In preparation for European Monetary Union, many nations exercised restraint in their fiscal and monetary policies. Members of the E.U. have been running tight budgetary policies for several years now so that they may qualify for monetary union under the stringent guidelines set forth in the Maastricht Treaty. This has led to the current environment where subdued inflation has paved the way for economic recovery. Along with trends of consolidation and corporate restructuring stemming from a need to remain competitive in an increasingly international marketplace, these factors propelled many European stock markets to record levels.

For example, the stock markets of the U.K., Spain, Sweden, Switzerland, and the Netherlands all climbed more than 28% in local currency terms during 1997.4

4. Source: Bloomberg. Index is unmanaged and includes reinvested dividends. Total return measured in local currencies.

The portfolio's large European positions reflect the bargains our analysts are uncovering there. We believe that many European shares, especially those of smaller companies, offer compelling value. For instance, we purchased shares in Hazlewood Foods during the year, a U.K.-based food processing company. We were able to acquire shares of Hazlewood at attractive valuations after investor pessimism over increased retailer price pressure and the BSE (mad cow disease)

scare depressed the stock price. These concerns were very real, but the stock price plummeted to levels beneath what we felt represented fair value, as they failed to reflect the company's positive long-term business prospects. Another example is Bertrand Faure, a French car seat manufacturer. With an ongoing restructuring in Bertrand's German operations not fully reflected in the stock price, we were able to pick up shares in a firm that eventually should benefit from trends toward outsourcing, sophisticated car seats, and vehicles with more seats (e.g., sport utility vehicles).

While Asia suffered from an epidemic of currency devaluations (and various side-effects) this year, relatively modest exposure to the poorest-performing markets tempered their effect on the portfolio. Since we had viewed Asian markets as somewhat high-priced prior to these crises, the portfolio's value-orientation dictated only a minor allocation in this region. Our largest investment in Asia was (and continues to be) Hong Kong, which was largely unaffected by the contagion until October. At that time, worries mounted that in order for its products to remain competitive, the Special Administrative Region would abandon its U.S. dollar peg and let its currency devalue as well. The Hong Kong equity market swooned in the process, but we had steadily reduced our weighting there following the July handover of the former British colony to China.

We will continue to be circumspect in our approach to Asian shares, focusing on firms that have strong cash flow, low leverage, established franchises, and skilled, experienced management teams. This focus on quality drew us to Hong Kong in particular. Li & Fung, a high-quality company with a very strong balance sheet and a forward-thinking, sophisticated management team, is an example of a company that we have targeted. Li & Fung manages manufacturing programs for companies involved in the production of labor-intensive consumer goods. While the company trades at bargain levels, its net cash position, realistic strategy, and sound business provide a level of quality that is especially important during periods of volatility. Giordano, a Hong Kong-based retailer of "value for the money" casual apparel is yet another example of a financially solid Asian firm that meets our bargain criteria. Investors fled the company over concerns regarding ongoing difficulties in the firm's Chinese operations. While China is clearly a risk, these concerns appear overblown to us in light of Giordano's strong brand name, successful business model and cash stockpile.

Latin American markets performed quite well during the year. While markets did sell off in the latter part of 1997 in response to the Asian crisis, the high debt problems associated with Asian companies are less prevalent in Latin America. Consequently, we may be able to locate attractive, high-quality smaller companies for the portfolio. One example is Petroleo Ipiranga, a Brazilian company that distributes petroleum and diesel fuel to gas stations in that country. The company has an attractive balance sheet and should be a beneficiary of strong growth as Brazilians begin to purchase more automobiles and drive more frequently in an economy expected to see better long-term stability.

Looking forward, we will continue to assess the Asian economy and its impact on companies around the world. While we are confident that the recent market corrections present opportunities, we are cautious in our approach, and will limit our investments to high-quality companies where we feel that the stock price does not adequately reflect the company's long-term intrinsic value. Therefore, we expect that the largest concentration of the portfolio's assets should remain in Europe, where we continue to uncover attractive small-cap stocks.

GRAPHIC MATERIAL 13 OMITTED - SEE APPENDIX AT END OF DOCUMENT

TEMPLETON PACIFIC GROWTH FUND

In the past year, Asian financial markets experienced a period of severe volatility and intense corrections. Sparked by speculative attacks on the Thai baht before July, a rash of currency devaluations quickly infected much of the continent. By late October, Indonesia, Malaysia, Pakistan, the Philippines, Singapore, South Korea, Taiwan and even Australia and Hong Kong had been

significantly affected by downward pressure on their currencies and falling equity prices. This experience had the side effect of highlighting macroeconomic problems present in many of these nations, such as slowing export growth, rising deficits, overvalued property markets, and weak banking systems.

The downward spiral of Asian equity markets adversely affected the portfolio's performance during the year. Hardest hit were the markets of Thailand, which fell 52% over the year, Malaysia, 51%, and the Philippines, 40%.5 Hong Kong continued to be the portfolio's largest exposure, accounting for 32% of total net assets on December 31, 1997. Even though its economic fundamentals remained strong during the year, its stock market suffered significant declines in a volatile environment. On December 31, 1997, the Hang Seng Index was 20% lower than it had been on December 31, 1996, after surviving a 35% decline from August to the end of 1997.6 Still, such corrections often produce an atmosphere where we can discover undervalued securities. One stock we believed to be undervalued was Hong Kong Ferry Holdings, which operates ferry and related businesses, and is involved with other activities such as property investment and travel and hotel operations. Due to its attractive valuation, we added to our existing holdings of this stock in 1997.

5. Source: Bloomberg. Index is unmanaged and includes reinvested dividends. Total return measured in local currencies. 6. Source: Bloomberg. Price depreciation measured in Hong Kong dollars.

Despite an extremely strong year for China's economy, we saw signs of a slowdown toward the end of 1997. In 1998, restructuring of state-owned enterprises could cause further slowing of economic growth. Worries still abound that the outbreak of currency devaluations in neighboring countries may affect China's competitive position in exports. Consequently, we sold our holdings of Beijing Yanhua Petrochemicals for a profit during the year.

Also during the period, we initiated a position in Tata Engineering & Locomotive Co., Ltd., an Indian manufacturer of commercial automotive vehicles, which we considered undervalued. The stock of Brambles Industries Ltd., based in Australia, reached our sell-price target and we liquidated our position.

We believe that although Asian markets could experience further declines, they could also provide excellent opportunities for purchasing shares of companies unfairly punished by generalized fear about these countries' economic circumstances. In our opinion, the Pacific Rim continues to offer a variety of investment opportunities and the economies of these countries are storehouses of value in the long run.

PORTFOLIOS SEEKING GROWTH AND INCOME

GROWTH AND INCOME FUND

Throughout the year, the U.S. economy continued its steady course of moderate growth with virtually no inflation. In this benign economic atmosphere, corporate profits continued their climb and stock market valuations rose to the expensive end of their historical ranges. During the latter part of the year, however, stock markets the world over experienced a dramatic rise in volatility. Such a stark increase in market volatility came about as a result of the Asian crisis sparking fears of a slowdown in corporate earnings growth. As a result, there has been a renewed focus in global equity markets on value stocks that have defensive characteristics during turbulent times. The recent performance of the Growth and Income Fund, which has a value orientation, reflected this current trend.

In keeping with its fundamental investment approach, the portfolio seeks to invest in stocks with attractive valuations — that is, stocks selling at bargain prices according to measurements such as relative dividend yield, book value, revenues, and normalized earnings. We often find such stocks in companies that appear to be fundamentally strong, but have experienced temporary earnings disappointments, or in companies or industries with uncertain prospects for near-term earnings growth.

We continue to believe that various utility stocks represent an investment opportunity as many companies are selling at their most attractive relative valuations in over two decades. Lack of meaningful earnings growth in recent years and uncertainty regarding the future deregulation have resulted in the industry's underperformance against the broader stock market averages over the last several years. We took advantage of this weakness to initiate a position in Entergy Corp., a New Orleans-based electric utility that offered a 6.9% dividend yield and traded at nine times our calculations of estimated earnings at the time of purchase. In the telephone utility sector, we added AT&T to the portfolio. At the time of purchase, AT&T's stock sold at 10 times depressed earnings and offered a dividend yield of over 4%. Management recently announced a major restructuring plan that should significantly reduce the company's costs.

Energy stocks remained a major investment focus for the portfolio. The combination of strong cash flows, attractive fundamentals and above-average dividend yields made many stocks in this industry ideal investment candidates for us. Moreover, we believe the rising worldwide demand for oil, in relation to exploration and production activity could lead to higher oil prices. We added to existing holdings during the reporting period -- including increasing our positions in Atlantic Richfield, Chevron, Texaco, and YPF Sociedad Anonima -- and, on December 31, 1997, this sector represented 15.1% of total net assets.

The financial sector -- the portfolio's largest sector weighting -- made an impressive showing this year, benefiting from strong fundamentals and declining interest rates. Over the reporting period, we initiated a position in the consumer finance company Beneficial Corp., and also added two insurance companies that specialize in reinsurance: Mid Ocean Ltd. and Scor. All three stocks traded at attractive valuations relative to their peers and offered above-market dividend yields.

Finally, we took advantage of recent price weakness in consumer non-durable stocks to initiate new positions in Anheuser-Busch (the largest beer brewer in the world) and H.J. Heinz (a major food producer). The management teams of both companies recently announced corporate restructurings that could result in the resumption of favorable earnings growth.

While we added to existing holdings or initiated new positions, we also reduced several positions during the reporting period. Specifically, we sold Du Pont in the chemical industry, Sprint, British Telecom and Telmex in the utilities sector, and American Home Products and Tambrands in the consumer/health sector as these stocks had reached our price objectives. All were sold at significant total return gains. Conversely, we eliminated investments in weaker-positioned electric utilities that did not meet earlier expectations. Unicom, PECO Energy, and Public Service Enterprise Group came under pressure as a result of worsening competitive and regulatory environments within their areas of operation. We, therefore, sold these holdings and reinvested the proceeds in utilities that we felt were in better competitive positions and offered greater total return potential.

Looking forward, we remain committed to our disciplined, value-oriented approach, which has historically produced consistent and favorable long-term results.

INCOME SECURITIES FUND

Despite increased volatility in recent months, the stock and bond markets experienced another strong year in 1997, driven primarily by steady economic growth and low inflation. The stock market temporarily retreated from all-time highs toward the end of the year, in part as a result of financial and economic weakness in Asia and concerns over a potentially negative impact on the U.S. economy. The bond market also experienced some volatility during the period, but generally strengthened in the second half of 1997 as inflationary fears subsided and investors began to show a renewed interest in value and safe-haven securities. Many of the portfolio's sectors performed well over the year, with utility stocks, real estate stocks, and U.S. Treasury bonds leading the way.

General sector weightings in the portfolio did not change significantly over the past year. However, we did increase the portfolio's stock holdings from 41.1% to 45.6% of total net assets while reducing the portfolio's cash position from 6.0% to 4.9% over the year. As of December 31, 1997, 49.7% of the portfolio's assets were invested in bonds, 45.6% in stocks, and 4.7% in cash and other net assets.

Corporate bonds, which continued to be our largest fixed-income weighting, generally performed well during the year. Although corporate bond valuations were at relatively high levels in 1997, we were able to find some attractive investments in new and existing positions. We initiated several corporate bond positions during the period, including Del Monte Corp. (Food & Beverage), Paging Network, Inc. (Telecommunications), Revlon Corp. (Consumer Products), Tjiwi Kimia Finance Mauritius, Ltd. (Paper & Forest Products), ICN Pharmaceuticals, Inc. (Pharmaceuticals), and Venetian Casino Resort, L.L.C. (Gaming & Leisure). Additionally, we sold or tendered several positions at levels that we believed represented full value.

The portfolio's foreign bond positions performed well during the period despite increased volatility in foreign stock and bond markets. Over the year, we consolidated our foreign dollar-denominated Brady bond positions by swapping out of our Mexican Brady bonds and into Brazilian Brady bonds, which -- along with our Argentinian Brady bonds -- appeared to offer greater total return potential. We also took advantage of weakness in October resulting from the Asian crisis, by adding to our Brazilian Brady bond positions. Finally, we sold our Canadian bond position in May due to valuation concerns and currency risk.

Believing that subdued inflation and prospects for a balanced budget would allow interest rates to fall, we added to our holdings of U.S. Treasuries throughout the year. As a result, the portfolio benefited from the decline of the 30-year Treasury bond yield, which fell from 6.64% to 5.93% over the past 12 months. On December 31, 1997, U.S. Treasury bonds accounted for 8.3% of total net assets, up from 7.1% a year earlier.

Most of the portfolio's equity sectors performed well during the period with the real estate, pharmaceutical and utility stocks appreciating the most. We purchased several new convertible positions in the real estate sector, including Vornado Realty Trust (REIT), and Macerich Co. (REIT). These securities provide attractive income and downside protection while offering equity upside potential related to positive fundamental trends in the real estate industry. Following significant price appreciation, we sold the portfolio's remaining pharmaceutical holdings, as we believed upside potential for these stocks was limited at current valuations. The purchase and eventual sale of the pharmaceutical stocks is a good example of our contrarian style and active approach to investing, as we originally purchased the stocks when the sector was out of favor due to healthcare reform uncertainty in 1993 and 1994.

Utility stocks, which represented the portfolio's largest stock sector, rebounded after weakness in the first quarter and turned in a strong performance for the year. We initiated several new positions in the sector, including MidAmerican Energy Holdings Co., CMS Energy Corp. and Northern States Power Co., mid-western electric and natural gas utilities. Utility stocks were 26.6% of the portfolio as of December 31, 1997, up from 20.6% a year ago. We increased our weighting in utility stocks because we believed many of the stocks were undervalued and offered attractive high current income. In addition, we believe many utility stocks will benefit in a deregulated environment from stronger cash flow growth, less regulatory uncertainty, and higher valuations.

Looking at other sectors, strength in the technology stocks prompted us to recognize significant gains on the portfolio's Altera Corp. and Xilinx, Inc. convertible bond positions purchased last July during the technology sell-off. We initiated a position in General Motors common stock (Automotive) as we believed that the company's current corporate restructuring will significantly benefit shareholders. We also purchased a new issue of convertible bonds from Continucare Corp. (Health Care Services), a company specializing in outpatient rehabilitation services. In the energy sector, we took advantage of recent weakness in the group by purchasing convertible preferred shares of Energy Ventures (Energy) and Lomak Petroleum, Inc. (Energy). We also sold several stock positions that no longer fit the portfolio's valuation criteria.

With the stock market near all-time highs, we remain selective and are continually searching for attractive investments for our shareholders. We believe the portfolio is well positioned to benefit from the current market environment of low inflation and slow economic growth. Of course, we continue to follow our value-oriented approach, searching for income and growth from a diversified mix of stocks, bonds, and cash.

MUTUAL SHARES SECURITIES FUND

The Mutual Shares Securities Fund seeks capital appreciation by investing primarily in domestic equity securities. These include common and preferred stocks, securities convertible into common stocks, as well as debt obligations of any quality. On December 31, 1997, 73.4% of the portfolio's total net assets were invested in equity securities, 3.7% in fixed-income securities, and the remaining 22.9% in short-term and other securities. Of course, these holdings will change as conditions warrant.

Many stock indices were delivering astronomical returns during the first half of 1997 (the S&P 500 gained more than 20%7), tempting some investors to jump in and ride the market with an index fund. However, we believe that our value approach is a better way to achieve consistent, long-term appreciation with relatively low risk and low volatility. Even though indexing could lead to greater returns over a specific time period, this could place the investor on a perilous journey to mediocre returns and high volatility when market conditions are less favorable. The mix of our investments -- cheap stocks, bankruptcies, and special situations such as mergers and spin-offs -- is intended to provide the best risk-adjusted returns in a wide variety of market conditions.

7. Source: Bloomberg. Index is unmanaged and includes reinvested dividends.

It has become increasingly difficult of late to find cheap stocks, especially in

the domestic market, as investors look to "buy the dips" and are willing to buy stocks at historically high valuations. As a result, most of the large names that dominate indices such as the S&P 500 currently trade at valuations that do not fit our investment strategy. But cheap buys still exist. In the U.K., investors embraced the privatization of Railtrack, realizing the importance of lessening the burden of government regulation.

We continue to find good value in the European markets, particularly in the smaller and mid-cap stocks rather than the large cap stocks. This year will be an exciting one in Europe given the scheduled, albeit somewhat limited, introduction of the eurocurrency on January 1, 1999. Direct Pacific Rim exposure was virtually non-existent at year-end, but we are now looking to see whether the recent carnage has created an opportunity for us within the context of our usual investment parameters.

We also anticipate that the markets will present us with substantial opportunities over the next year. For instance, it appears that many investors have largely ignored the fact that some companies may not achieve analysts' aggressive earnings estimates. In particular, the "Asian flu" may have a greater ripple effect on some companies than the market has reflected. The merger and acquisition environment as well as divestiture activity continue to be strong. Even so, we will not "push the envelope" and increase the risk profile of our portfolio.

REAL ESTATE SECURITIES FUND

During the reporting period, the real estate industry continued to benefit from an environment of strong economic growth and relatively low interest rates. Demand for commercial and residential space remained strong, driven primarily by the growing economy. At the same time, development of new supply was restrained in most property sectors, leading to rising occupancy and rental rates. As a result, most real estate companies continued to report strong growth in cash flow from operations. Ongoing consolidation also contributed to the sector's growth, as private real estate companies and single-building owners merged with public real estate firms to take advantage of the financing flexibility and economies of scale enjoyed by the larger, public companies. For example, several of the portfolio's positions were involved in high-profile public mergers, including Starwood Lodging Corporation's announced mergers with Westin and ITT Sheraton and Equity Office Properties' merger with Beacon Properties

Throughout the reporting period, we remained committed to our strategy of focusing on property types and geographic regions with strong supply and demand fundamentals, while attempting to identify those management teams with the ability to add value through intensive property management and strong capital markets experience. In keeping with this strategy, we maintained the majority of the portfolio's investments in hotel, apartment, office and industrial properties, where we anticipate the strongest cash flow growth, as well as the most favorable supply and demand fundamentals.

At the end of the reporting period, the hotel sector was the portfolio's largest property type weighting, representing 20.1% of total net assets, up from 17.9% twelve months ago. Valuations in this sector remain attractive to us, particularly in light of the high cash flow growth rates. New development in the upscale hotel sector remains limited while demand continues to grow, resulting in increased room rates. Over the past year, we initiated positions in two notable lodging companies: Innkeepers USA Trust and Prime Hospitality Corporation. In our opinion, both were attractively valued and offered unique growth opportunities. Core holdings in this sector continued to include FelCor Suite Hotels, Inc., Patriot American Hospitality, Inc., Starwood Lodging Corp., CapStar Hotel Company and Host Marriott Corp.

The apartment sector was the portfolio's second largest property type weighting, totaling 16.8% of total net assets on December 31, 1997, down from 20.0% one year ago. Valuations in the apartment group remain attractive relative to other sectors and we expect steady cash flow growth. However, security selection is important in this sector as supply and demand fundamentals near equilibrium. While the overall sector weighting was trimmed and several positions were eliminated, we continued to focus on core holdings such as Equity Residential Properties Trust, Camden Properties Trust and Security Capital Pacific Trust. In

addition, our only new position in the apartment sector, Charles E. Smith Residential Realty, Inc., performed quite well as investors keyed on the company's new acquisition strategy focused on downtown high-rise apartments in major metropolitan areas.

We increased the portfolio's exposure to the office and industrial property sectors over the reporting period by initiating new positions in AMB Property Corporation, Mack-Cali Realty, Equity Office Properties, Tower Realty Trust and SL Green Realty Corporation. For the most part, these companies have heavy property concentrations in the Northeast and on the West Coast where new property development is limited. We believe that these securities were attractively valued and should generate above average cash flow growth over the next few years. We also maintained core positions such as Arden Realty Group, Security Capital Industrial Trust, Spieker Properties and Highwoods Properties, Inc. As of December 31, 1997, the office sector weighting was 11.9% of total net assets, up from 7.9% one year ago. The industrial sector now represents 10.9% of total net assets, up from 8.9% at the beginning of the reporting period.

Looking forward, we believe the real estate industry should benefit from steady demand for residential and commercial space and limited new development. In our opinion, the prospects for investing in real estate securities are quite attractive due to their unique combination of strong underlying fundamentals, favorable valuations, and attractive growth opportunities.

RISING DIVIDENDS FUND

Our investment strategy is based on our belief that companies with consistently rising dividends should, over time, also realize appreciation in their stock prices. We select portfolio securities based on several criteria. To be eligible for purchase, stocks must pass certain investment "screens," or screening procedures, requiring strong balance sheets, relatively low price/earnings ratios, and consistent and substantial dividend increases. We seek fundamentally sound companies that meet our standards and attempt to acquire them at attractive prices, often when they are out of favor with other investors.

The U.S. stock market benefited during 1997 from an economy characterized by solid growth, low inflation, and falling long-term interest rates. Financial services stocks, such as banks and insurance companies, performed particularly well in this positive atmosphere. This trend aided two of the portfolio's largest equity holdings, Mercury General Corp. and National Commerce Bancorp, which also had distinguishing attributes that contributed to their strong performance during the year. Mercury General is an automobile insurer which conducts the majority of its business in California. Mercury has been able to offer drivers attractively priced auto insurance through the combination of a strong distribution network, very effective claims handling capabilities, and a low cost structure. As a result, this firm has been able to gain market share while generating strong earnings growth.

National Commerce Bancorp. is a Tennessee-based regional bank that has become a leader in supermarket branch banking. Several years ago, the company determined that in order to be competitive, it not only had to have a very low cost structure, but also had to be able to offer top quality services to its customers. In order to achieve this, National Commerce decided that it needed to take itself to its customers, rather than waiting for its customers to come to it. And where could the bank make itself easily accessible to its customers? At their local supermarket, of course. This bank's branches are now almost exclusively located in high traffic supermarket stores — thereby eliminating the need for costly, stand-alone facilities. Like Mercury General, National Commerce has been able to gain market share and grow earnings as well.

The retail sector also performed well for the portfolio in the past year. Our largest holding in this sector is Family Dollar Stores, a leading participant in the growing "convenience discounter" retailing segment. Earnings growth has accelerated as a result of the company's everyday low-pricing strategy, in addition to its store remodeling and expansion program. The idea of offering basic merchandise at an attractive price from a convenient location is proving to be especially popular with low and middle-income consumers.

Despite the presence of the roaring equity market, several of the portfolio's

stocks suffered sagging prices during the year. These included Millipore Corp., MMI Cos., Inc., and Nike, Inc. Millipore's earnings were hurt during the year by weak sales of microelectronics filtration equipment coupled with the negative impact on foreign currencies of the indomitable U.S. dollar. Looking ahead, Millipore continues to be well positioned to benefit from the increasing demand for greater purification technology in growing industries such as semiconductor manufacturing and biotechnology. A slowdown in medical malpractice premium growth hampered the performance of MMI stock over the year. Although the medical malpractice market is still soft, MMI has several medical consulting businesses that are growing nicely and is also likely to benefit from its recent acquisition of another insurer, Unionamerica Holdings. Although Nike has become one of the world's most recognizable brand names, its earnings have suffered from a slowdown in domestic footwear sales and, more recently, a decline in sales to Asia due to the economic crisis in that region. On the other hand, Nike continues to expand its already formidable global distribution capabilities and is extending its dominant sports-related franchise into different athletic footwear and equipment categories, which bodes well for the corporation's long-term prospects.

During the year, we added several new positions to the portfolio, such as Bemis Company, Inc., a manufacturer of flexible packaging for use by the food service industry. We also purchased shares of Pall Corp., which makes fluid filtration devices for a variety of industries, including healthcare. ReliaStar, a provider of a broad range of insurance-related investment products, has increased its dividend for 26 years, and was added to the portfolio in 1997. Finally, we initiated positions in Sherwin-Williams, a retail distributor of architectural coatings, and U.S. Bancorp., one of the top performers among regional banks.

We eliminated several positions from the portfolio during the reporting period as they no longer fit our investment criteria. Bristol-Myers Squibb Co., Gap, Inc., Monsanto Co., Pfizer, Inc., Safeco Corp., UST, Inc., and Walgreen Co. either suffered from slowing dividend growth, falling dividends, or they simply became less attractively valued than alternative investments.

Our ten largest positions on December 31, 1997, comprised 25.6% of the portfolio's total net assets. It is interesting to note how these ten companies would, in the aggregate, respond to the portfolio's screening criteria based on a simple average of statistical measures. On average, these ten companies have increased their dividends 18 years in a row, and by 345% in the last ten years (this excludes Fannie Mae's colossal 2,000% increase). Their most recent dividend increases averaged 13.7%, with a dividend pay-out ratio of 25%. Long-term debt averaged 14% of capitalization, and the average price/earnings ratio was 19.7, viewed against 21.4 for that of the unmanaged Standard & Poor's 500(R) Stock Index on the same date. It is our opinion that these companies are representative of the fundamentally high quality of the portfolio. We also believe that, over the long haul, companies that increase cash payments to shareholders, year after year, will be superior builders of wealth.

TEMPLETON GLOBAL ASSET ALLOCATION FUND

Volatility and uncertainty dominated global markets in 1997, most of which can be traced back to Southeast Asia's by now well-documented financial troubles that began to surface around mid year. Questions about Asia's financial future will no doubt remain unanswered for some time, although an economic recovery there will depend, to a large extent, on whether Japan finally realizes economic growth in 1998. We are carefully picking through the ashes in Southeast Asia, looking for undervalued companies with strong balance sheets that can weather the inevitable storms over the next few years.

The Hong Kong market was down over 20% in 1997 and underperformed due to the threat of a currency devaluation, the possibility of a slowdown in China, and over-extended property prices.8 We believe that Hong Kong will maintain the currency peg because, unlike many other Asian countries, Hong Kong has budget and current account surpluses, a robust banking system and \$70 billion in foreign currency reserves. Perhaps more importantly, it has China's support, which needs to maintain confidence in Hong Kong's capital markets so that it can use them to privatize its state-owned companies. In our opinion, the risks of a devaluation have been overly discounted, with the market trading at only 9.8 times 1998 earnings.9 As of December 31, 1997, the portfolio had a 2.6% weighting in Hong Kong.

- 8. Source: Bloomberg. Price depreciation measured in Hong Kong dollars.
- 9. Source: Morgan Stanley Capital International (R).

Lately, the fad for mega-mergers has reappeared across the "pond." As in the U.S., such mergers have been concentrated in the financial services area. The advent of the euro has forced banks and insurance companies to focus on pan-European economies of scale. For example, two giants of the Swiss banking market, UBS and Swiss Bank, agreed to merge in a \$25 billion transaction, and insurance companies BAT of the U.K. and Zurich of Switzerland agreed to tie the knot for \$18 billion. We invested in this trend via our insurance and financial services holdings which respectively made up 5.9% and 3.3% of the portfolio at the end of the reporting period.

The U.K. is much further ahead of continental Europe in terms of the business cycle (it is the only major country with an inverted yield curve), shareholder value and corporate restructuring. We currently favor the U.K., as it is one of the few countries that can opt in or out of the euro. It also has some of the cheapest valuations and highest yields in Europe (the average dividend yield of our U.K. holdings was 3.9% at period end) as well as political certainty. Finally, there are still opportunities for corporate restructuring in the U.K. Within our own holdings, restructuring is taking place at ICI, Harrisons and Crosfield, and BTR.

The U.S. has just completed its seventh year of economic growth. The Goldilocks economy (not too hot, not too cold) continued with moderate economic growth and inflation at an eleven-year low of 1.7%.10 At the same time the budget is moving toward its first surplus since 1969, and the dollar is regarded the safe haven in a world of uncertainty. However, our main concern is over-extended stock market valuations, which have no sympathy for earnings disappointments. On December 9, Oracle's share price declined by 29% because its second quarter profit figure of \$0.19 was 4 cents below expectations. 1997 was the third consecutive year of 20%-plus returns for the Dow Jones(R) Industrial Average, an unprecedented accomplishment.

10. Source: Bloomberg. Inflation $% \left(1\right) =100$ measured as CPI $% \left(1\right) =100$ year-over-year percentage change as of 12/97.

By historical measures, however, all valuations are stretched, with the S&P 500 trading at an estimated 19 times 1998 earnings, a 20-year high.11 Therefore, we place more confidence in economic growth than in stock prices. Although the U.S. remains our largest single country weighting with regard to equities, accounting for 16.1% of total net assets, we have been taking profits throughout the year (the U.S. weighting at the end of 1996 was 20.8%). We are underweight versus

other benchmarks and have a high composition of undervalued and defensive stocks. Although we have not found many new U.S. bargains, the recent technology sector shakedown has turned some growth stocks into value stocks. For example, the market punished networking and modem company 3Com for disappointing earnings announcements, and the stock finished the year off 52%.12 Although there could be further short-term disappointments, we consider this an undervalued stock, and we added to our position.

11. Source: IBES.12. Source: Bloomberg.

On October 27, 1997, the Brazilian Bovespa index dropped 15% as concern spread regarding the overvalued currency and twin budget and current account deficits.13 Unlike the Asian countries however, the Brazilian government took swift action to restore confidence by doubling interest rates to 45% and announcing severe budget cuts totaling \$18 billion, or 3% of gross domestic product. We believe that Brazil will not devalue its currency because it has taken adequate measures to restore stability, and proceeds from privatization that could total \$90 billion by 2000 can finance future investment. Analysts expect this market's earnings to grow at 26%, and we have invested nearly 5% of the portfolio in Brazilian equities including Banco Bradesco, one of our largest holdings.

13. Source: Bloomberg. Price depreciation measured in Brazilian reals.

We believe that opportunities are born out of adversity, and we continue to search diligently for overlooked opportunities around the world.

UTILITY EQUITY FUND*

*Effective May 1, 1998, the Utility Equity Fund will change its name to the Global Utilities Securities Fund and the percentage of foreign securities the portfolio may invest in will increase from 25% to 100%. The portfolio's objectives will remain the same.

Although the utility sector trailed some of the broad market indices this year, the S&P Electric Utilities Index actually has outperformed the S&P 500 in the fourth quarter by over 1500 basis points.14 This change in investor sentiment reflects a movement toward "safe haven" securities due to several factors. Global currency market disruptions led to earnings revisions for many corporations, thereby increasing stock market volatility. Also, evidence is building that the U.S. economy is beginning to slow down. These factors, in conjunction with the positive impact of decreased regulatory risk, made the utility sector attractive to many investors.

14. Source: Bloomberg. Indices are unmanaged and include reinvested dividends.

The U.S. economic environment during the year was generally favorable for interest-rate sensitive stocks. With long-term interest rates declining steadily since April, and relatively high natural gas prices, domestic utility stocks performed well in 1997. A favorable regulatory environment also added to this picturesque background, when -- in September -- the 8th U.S. Circuit Court of Appeals removed some of the uncertainty surrounding the Telecommunications Act of 1996, with a ruling that more clearly defined the role of new competitors. With California leading the way, several states are in the process of completing plans to restructure the electric generation business. This bodes well for the industry's future, as a complete resolution of regulatory issues should enhance utility companies' earnings, and make their stocks more attractive to investors.

With the European Monetary Union looming just around the corner, interest rates there painted a picture similar to the U.S. situation. Most European nations continued to exercise a great deal of fiscal and monetary restraint to qualify for monetary union under the Maastricht Treaty's strict criteria. Interest rates in traditionally high-yielding markets such as Spain and Italy came down significantly, moving toward convergence with the likes of Germany and France, which encouraged investors to bid up the prices of many utility stocks. Germany, Switzerland, Finland, Italy, and Portugal were among the best performing utility markets. Taking advantage of this strength, we sold our shares of Italmobiliare and Electricidade de Portugal at a profit. It is our belief that many European

utility companies are currently positioned to benefit from a large, pent-up demand for telecommunications services. In our opinion, our holdings of Telefonica de Espana and Hellenic Telecommunications Organization could experience extensive growth for several years to come.

In the first half of the year, solid economic growth and lower inflation allowed for increased infrastructure spending in Latin America. The earnings outlook for Latin American utility companies was therefore quite positive, prompting us to initiate new positions in such companies as Telefonica del Peru and Companhia Paranaense de Energia-Copel. These corporations have positioned themselves to potentially profit from the rapidly growing demand for electricity in Latin America. The economic environment in Brazil also created some promising investment opportunities, as privatization and regulatory reform in the telecommunications and electric utilities industries accelerated. This led us to purchase shares of Telecomunicacoes Brasileiras, Brazil's largest telecommunications provider.

Believing that most Asian utility stock valuations were simply too high, we maintained a low weighting in Asia during the year. This was fortunate, as the portfolio was somewhat insulated from the direct impact of the Asian problems that surfaced after June. Despite this region's turmoil, we believe that the long-term economic growth rate of many Asian countries is likely to be much higher than that of some developed markets. Most of our Asian holdings are in China, Hong Kong, and India, whose economies -- in our opinion -- still possess the ability to grow strongly over the next few years.

Looking ahead, we are optimistic about the prospects for utility companies worldwide. Given the prevailing environment of accelerating privatization and regulatory reform, utilities stocks could continue to perform well in both Europe and Latin America. As for the U.S., we think many high-quality utility companies with aggressive, entrepreneurial management have the potential to expand their operations and generate solid earnings growth. Utility companies provide services that are an essential part of peoples' lives, and it is our belief that their stocks play an integral role in a well-diversified investment portfolio.

UTILITY EQUITY FUND CHANGES OF FUND NAME AND NON-FUNDAMENTAL POLICIES

ON MAY 1, 1998, THE FUND'S NAME WILL CHANGE TO "GLOBAL UTILITIES SECURITIES FUND." THE FUND'S CURRENT POLICY LIMITING FOREIGN INVESTMENTS TO 25% OF NET ASSETS WILL BE LIFTED, SO THAT THE FUND WILL BE AUTHORIZED TO INVEST WITHOUT LIMIT IN FOREIGN SECURITIES. The Fund's investment objective, its policy of concentrating its investments in the public utilities industry, and its other investment policies and restrictions will remain the same.

After the changes take place, the Fund will normally invest at least 65% of its total assets in issuers domiciled in at least three different countries, one of which may be the U.S. Under normal circumstances, the Fund is expected to invest a higher percentage of its assets in U.S. securities than in securities of any other single country. The Fund's Manager believes that a global utilities fund

may benefit from a wider selection of investment opportunities and greater diversification than a fund which invests primarily in securities of domestic utility companies.

The Fund's increasing investments in foreign securities will involve increasing risk. Foreign securities involve greater risks than similar domestic securities due to currency fluctuations, market volatility, and economic, social and political uncertainty. Investments in foreign developing markets involve heightened risks related to the smaller size and lesser liquidity of these markets. INVESTORS SHOULD CONSIDER CAREFULLY THE SUBSTANTIAL RISKS INVOLVED IN INVESTING IN FOREIGN SECURITIES, RISKS THAT ARE HEIGHTENED FOR INVESTMENTS IN DEVELOPING MARKETS. SEE "HIGHLIGHTED RISK CONSIDERATIONS, FOREIGN TRANSACTIONS."

HIGH INCOME FUND

The "Goldilocks economy" continued its reign in the U.S. during the year under review, ensuring an environment that was "just right" for market participants. This was particularly true for holders of corporate high yield bonds, which were a top performer within fixed income asset classes in 1997. The portfolio also turned in a laudable performance for the year, fueled by bonds with improving credit profiles as well as those experiencing positive corporate events. Our investments continue to be oriented toward bonds that are expected to experience capital appreciation due to one or both of those factors.

With a keen eye focused on reducing our exposure to the economically sensitive chemicals and gaming industries, we took profits in a few positions such as IMC Global (chemicals) and Aztar (gaming). We also reduced weightings in the cable television and food retailing industries during the year, selling positions that we thought could be vulnerable to competitive threats in their respective markets.

In the media and broadcasting arena, deregulation fostered significant merger and acquisition activity, leading us to increase our exposure to the sector. During the year we initiated positions in Chancellor Media and Hollinger, companies that we think are well positioned to capitalize on positive industry trends. In the industrial sector, we increased our weighting by focusing on companies that we believe should perform well in a more subdued economic environment, such as Allied Waste Industries. The wireless communications industry also provided some attractive investment opportunities in 1997, and future prospects are bright due to ongoing market-friendly legislation. Within the various wireless industry subsectors, we tend to favor the leaders, such as Paging Network in paging, along with Sprint Spectrum and Nextel Communications in digital PCS. Finally, while increasing our weighting in telecommunications we focused primarily on competitive local exchange carriers such as Teleport and Intermedia.

As measured by Moody's, the portfolio's average credit rating on December 31, 1997, was B2. Looking forward, we expect to maintain or improve this average credit rating, anticipating somewhat of an economic slowdown over the next year. We feel that a slower-growing economy, combined with low inflation, will continue to provide a favorable environment for corporate high yield bonds.

TEMPLETON GLOBAL INCOME SECURITIES FUND

The worldwide economic atmosphere made global bond investing a perilous business in 1997. In the U.S., economic growth proceeded at a pace historically associated with rising inflation and falling bond prices, causing considerable tension in the bond market. Ten-year U.S. Treasury bond yields, for example, began the year at 6.42%, rose to a high of 6.97%, and then fell to 5.74% at the end of the year.15 The U.S. dollar was equally volatile, with a number of foreign currencies depreciating between 2% and 52% against the U.S. currency.

15. Source: Bloomberg.

This volatility resulted from three distinct developments during the period. First was a general fear in the markets that the rapid U.S. economic growth and low unemployment would eventually translate into higher inflation. Second, prospects for European Monetary Union improved during the year, with many European economies converging in preparation for this event. Last, the Asian currency crisis produced shockwaves throughout global markets that should take some time to dissipate. Each of these developments affected global interest rates and currency values in different ways.

Much portfolio activity related directly to the sources of volatility in the global bond markets, particularly to foreign currencies' decline in value relative to the U.S. dollar. We also made portfolio adjustments in the composition of its European and within the dollar bloc countries. Finally, we increased the portfolios' emerging markets holdings.

Responding to the U.S. dollar's accelerating upward momentum relative to European currencies, we reduced the portfolio's overall exposure to European bonds and increased holdings of U.S. dollar-denominated bonds. We also increased the use of forward sales of European currencies, seeking to preserve the dollar value of our European bond holdings. The net currency exposure to European currencies (actual holdings plus the effect of currency hedges) was 52.8% at the beginning of the period and had fallen to approximately 46.7% by the end of the period.

We reallocated the portfolio's European holdings during the year through the sale of modest amounts of bonds from Denmark, Ireland, Italy and the United Kingdom, while the portfolio's German position was increased.

Within the dollar bloc markets, we dramatically reduced our exposure to Australia in favor of dollar-denominated Latin American securities. Our Latin American holdings, as a percentage of total net assets, nearly doubled over the course of the year, from 10.9% to 21.3%. The portfolio's largest emerging markets position as of the end of the year was in Mexico, where we increased our exposure from 4.8% to 7.1%.

In our view, a somewhat slow-growing U.S. economy in 1998 could be a major boon for global bond investors for several reasons. Of course, this could lead to reduced pressure on interest rates. In addition, though, slower growth would also tend to help foreign currencies rebound against the U.S. dollar, representing the possibility of attractive capital gains for U.S.-based investors. The Asian problem may also encourage a weakening of the dollar since it could very well lead to a widening of the U.S. trade and current account balances.

The outlook for global bond markets in 1998 seems promising to us, although patience may be required for investment opportunities to arise. The Asian financial quagmire, as an example, should serve to moderately deflate growth and inflationary pressures in the developed nations, removing the impetus for central bankers to raise interest rates.

U.S. GOVERNMENT SECURITIES FUND

The U.S. bond market turned in a strong performance for 1997 as interest rates declined during the year. The yield curve flattened drastically -- one-year Treasury bill yields finished both 1996 and 1997 at 5.48%, while 30-year Treasury bond yields fell from 6.64% at the end of 1996 to 5.93% on December 31, 1997.16 The Federal Reserve Board (the Fed) moved interest rates only once during the year, when it raised the federal funds rate by 25 basis points at the Federal Open Market Committee's March meeting. While economic growth and consumer demand continued to be strong throughout the year, actual inflation figures consistently moved lower. The unemployment rate in the U.S. continued to move lower throughout the year with labor costs creeping higher. Although normally we would expect tight labor markets to give way to spiraling inflation through wage increases, large gains in productivity apparently allowed U.S. businesses to absorb higher labor costs without passing on the cost increases to consumers. Lower commodity prices also helped to keep inflationary pressures in check during 1997.

16. Source: Bloomberg.

During the middle of the year, disruptions in several developing southeast Asian economies became apparent which eventually led to ripple effects around the globe. By the fourth quarter, global equity markets swooned from the Asian debacle and U.S. government bonds became safe havens for investors, helping to push yields lower. In addition to the global situation, the strong U.S. economy served to bolster tax revenues which lowered the U.S. budget deficit and reduced the issuance of U.S. Treasury bonds into the marketplace. The lower supply of bonds also contributed to falling long-term interest rates during the year.

Lower interest rates helped the performance of the portfolio's holdings in U.S. government and agency securities. The portfolio is geared toward intermediate-term government securities and we continued to add positions across various government agencies and sectors during the year, including agency pass-through securities.

At this time, we do not anticipate that the Fed will move interest rates in the months ahead given that the Asian crisis has not yet fully played itself out. On the one hand, continued strong consumer demand may keep pressure on the Fed to move rates higher sometime next year due to the high rate of utilization in the labor and resource markets that currently exists. Then again, year-over-year inflation rates have been under 2%, which may allow long-term rates to continue moving lower, should consumer demand slow sufficiently to ultimately ease labor markets.

Therefore, we expect that the 30-year U.S. Treasury bond market may be range bound around the 5.75% to 6.25% level in the months ahead. As interest rates move to the lower end of that range, agency pass-through securities may be subject to prepayment risk, so new assets will likely be allocated to more non-callable securities until a more favorable environment develops. It is our belief that while the supply of mortgage pass-throughs should rise in the months ahead, agency issuers will continue to provide positive support to pass-through yield spreads.

As far as the Treasury market is concerned, we expect that the U.S. yield curve will continue to have a flatter profile in the months ahead. If growth slows significantly enough for the Fed to ease monetary policy, the curve may steepen. However, we anticipate that any monetary tightenings will signal to investors that the Fed is ahead of the curve in terms of inflation, and bond yields may fall in response.

ZERO COUPON 2000 FUND ZERO COUPON 2005 FUND ZERO COUPON 2010 FUND

The past year bore witness to a substantial decline in long-term interest rates, though for a while it appeared that rates would move higher, driven by accelerating inflationary pressures. These pressures simply never materialized,

and the Federal Reserve (the Fed) raised interest rates only once during the year -- an action which eventually allowed long-term rates to come down significantly.

All three portfolios benefited from the fall in interest rates during the year. The longer portfolios enjoyed the best returns because of their high duration and the fact that longer term interest rates (10 - 30 years) fell more than intermediate term rates (2 - 5 years). This flattening of the yield curve came about because the Fed held the target rate for federal funds at 5.50% although inflation fell throughout the year allowing longer term interest rates to fall as well. Inflation, as measured by the consumer price index, year over year, is now 1.7%, the lowest level in 11 years.17 Productivity gains, global competition and moderate economic growth should be conducive to a low inflation environment.

17. Source: Bloomberg. Year-over-year as of 12/31/97.

The Zero Coupon portfolios aim to maintain investments as close to the target maturities as is practically possible. This makes changes in interest rates a highly significant factor affecting the unit value of these portfolios. With two years to maturity in the 2000 portfolio, this portfolio's value could experience an approximate 3% swing in value for every 100 basis point (1%) swing in interest rates. Likewise, the 2005 portfolio has the potential to move approximately 8% for the same change in interest rates, and the 2010 portfolio could move -- up or down -about 13%.

Normally, individual zero coupon bonds will return a fixed rate, if held to maturity. Zero coupon investments, therefore, can be attractive for both aggressive and risk-averse investors. Of course, a managed portfolio of zero coupon bonds will fluctuate with cash flow in or out of the portfolio, or vary with market conditions. In each portfolio, we strive to maintain -- at all times -- a duration within 12 months of the target maturity. We do not try to time the market; instead, our portfolio activity mirrors shareholder activity.

PORTFOLIO SEEKING CAPITAL PRESERVATION AND INCOME

MONEY MARKET FUND

An atmosphere of strong economic growth and very mild inflation was prevalent in the U.S. throughout 1997. Real gross domestic product (GDP) growth through the first three quarters of the year was 3.8%, considerably outpacing the Federal Reserve's (the Fed's) targeted long-term growth rate of 2.5%. Unemployment fell to its lowest level in 25 years, as a direct result of the country's economic strength. In the spring, the fast pace of economic growth and the tightening labor markets raised some concerns at the Fed that prices might have been in danger of inching up. The Fed responded by increasing the federal funds rate by twenty-five basis points (0.25%) in late March. Since the rate hike, the Fed has remained on the sidelines, not responding to the continued economic strength for a couple of reasons. First, despite the torrid pace of GDP growth, consumer prices increased by only 1.7% in 1997 -- the lowest increase in 11 years.18 Second, the Asian financial crisis which began to shake global equity markets in October may have prevented the Fed from taking any steps which would induce further volatility into the international financial markets.

18. Source: Bloomberg. Inflation measured as CPI year-over-year percentage change as of 12/97.

The rise in short-term interest rates caused the portfolio's seven-day yield to increase from 5.04% on December 31, 1996 to 5.28% at the end of 1997.

We believe the economy is in the later stages of the current business cycle. Higher private consumption and increased capital spending should stimulate more growth, which could ultimately lead to further wage inflation. However, we think that the impact of higher wages on overall consumer prices should be dampened by ongoing improvements in manufacturing productivity and lower exports to the Far East as a result of the crisis in Asia. Taking all these factors into consideration, we believe that the Fed will remain inactive until it has fully assessed the impact of these variables on domestic economic growth and inflation.

We continue to invest the portfolio's assets in securities that are among the highest quality available to money market funds. Since the portfolio's objective is to provide shareholders with a high quality, conservative investment, we do not invest in leveraged derivatives or other potentially volatile securities that we believe involve undue risk.

REPORT OF SPECIAL MEETING OF SHAREHOLDERS

At the Special Meeting of Shareholders of Franklin Valuemark Funds held on April 4, 1997, shareholders voted as follows:

1. Regarding the election of trustees who constitute the current $\ensuremath{\mathsf{Board}}$ of $\ensuremath{\mathsf{Trustees}}$.

IMPORTANT ENDNOTES
TO PERFORMANCE INFORMATION

Total return of the portfolio is the percentage change in value of a hypothetical \$10,000 investment over the indicated periods and includes reinvestment of dividends and capital gains. Inception dates of the portfolios may have preceded the effective dates of the subaccounts, contracts, or their availability in all states. Performance data is historical and cannot predict or guarantee future results. Principal value and investment return will fluctuate with market conditions and you may have a gain or loss when you withdraw your money.

When reviewing the index comparisons, please keep in mind that indices have a number of inherent performance differentials over the Valuemark portfolios. First, unlike the Valuemark portfolios, which must hold a minimum amount of cash to maintain liquidity, indices do not have a cash component. Second, the Valuemark portfolios are actively managed and, thus, are subject to management fees to cover salaries of securities analysts or portfolio managers in addition to other expenses. Indices are unmanaged and do not include any commissions or other expenses typically associated with investing in securities. Third, indices often contain a different mix of securities than the portfolio to which they are compared. Additionally, please remember that indices are simply a measure of performance and cannot be invested in directly.

INDEX DEFINITIONS

INDEX	DEFINITION
CONSUMER PRICE INDEX	Measure of the average change in prices for a fixed basket of goods and services regularly bought by consumers in the United States published by the U.S. Bureau of Labor Statistics.
FINANCIAL TIMES/ S&P ACTUARIES WORLD (ENERGY 50%/ INDUSTRIES 50%) COMPOSITE INDEX	The basic sector includes: construction and building materials, chemicals, mining, minerals, precious metals and minerals, forestry and paper products, and fabricated metal products. Basic The energy sector includes oil internationals, crude producers, petroleum products and refineries, non-oil energy sources, and energy equipment and services. The index is compiled by

	the Financial Times, Goldman Sachs & Co., and Wood Mckenzie & Co., Ltd., in conjunction with the Institute of Actuaries and the Faculty of Actuaries, and is a weighted arithmetic average of the price relatives of the constituents as produced by transaction in the marketplace and adjusted for intervening capital changes. The Index is in U.S. dollars and total return.
FINANCIAL TIMES/ ACTUARIES WORLD UTILITIES INDEX	Includes electric utilities, waterworks supply, natural gas S&P utilities, and telephone companies. The index is compiled by the Financial Times, Goldman Sachs & Co., and Wood Mckenzie & Co., Ltd., in conjunction with the Institute of Actuaries and the Faculty of Actuaries, and is a weighted arithmetic average of the price relatives of the constituents as produced by transaction in the marketplace and adjusted for intervening capital changes. The Index is in U.S. dollars and total return.
FIRST BOSTON HIGH YIELD	Unmanaged, trader-priced portfolio constructed to mirror the public high yield debt market (revisions to the index are effected weekly). The index has several modules representing different sectors of the high yield market including a cash-paying module, a zero-fix module, a pay-in-kind module, and a defaulted module. The index is also divided into other categories including industry, rating, seniority, liquidity, market value, security price range, yield range, and other sector divisions.
INTERNATIONAL FINANCE CORPORATION'S (IFC) INVESTABLE COMPOSITE INDEX	Emerging markets index that includes 650 stocks from 18 countries including Mexico, South Korea, Brazil, Jordan, and Turkey.
JP MORGAN GLOBAL BOND INDEX (UNHEDGED)	A total return index that tracks the traded sovereign issues of 13 international markets. Each market is weighted according to its traded market capitalization in U.S. dollar terms, and all issues included in the index are liquid with remaining maturities of greater than 13 months.
GOVERNMENT/CORPORATE BOND INDEX	Includes fixed-rate debt that is rated investment grade or higher by Moody's, Standard & Poor's, or Fitch. Debt is issued by the U.S. government and its agencies, domestic corporations, and foreign dollar-denominated securities.
LEHMAN BROTHERS INTERMEDIATE GOVERNMENT INDEX	Includes fixed-rate debt that is rated investment grade or higher by Moody's, Standard & Poor's, or Fitch. Debt is issued by the U.S. government and its agencies, and has a maturity of one to ten years.
LIPPER INCOME AVERAGE	Consists of 21 equity funds that normally seek a high level of current income through investing in income-producing stocks, bonds, and money-market instruments.
MERRIL LYNCH TREASURY ZERO COUPON FIVE, TEN TWENTY YEAR INDICES	Includes five-, ten- and twenty-year zero coupon bonds, respectively, which pay no interest and are issued at a discount from redemption price.
MORGAN STANLEY CAPITAL INTERNATIONAL EUROPE AUSTRALIA FAR EAST (EAFE) INDEX	Includes approximately 1000 companies representing the stock markets of 18 countries in Europe, Australia, New Zealand, and the Far East. The average company has a market capitalization of over \$3 billion. This is a total return index in U.S. dollars, with gross dividends reinvested.
MORGAN STANLEY CAPITAL INTERNATIONAL (MSCI) SINGAPORE/ PACIFIC BASIN INDEX	Includes over 400 companies and the five countries of Australia, Hong Kong, Japan, New Zealand, and Malaysia. This is a total return index in U.S. dollars, with gross dividends reinvested.
MORGAN STANLEY CAPITAL STOCK INTERNATIONAL (MSCI) WORLD INDEX	Includes approximately 1450 securities listed on the exchanges of 20 countries including the U.S., Europe, Canada, Australia, New Zealand, and the Far East. The average company in the index has a market capitalization of about \$3.5 billion. This is a total return index in U.S. dollars, with gross dividends reinvested.
RUSSELL 1000 INDEX	An index consisting of the highest-ranking 1,000 large-capitalization U.S. stocks.
DUGGETT SECO INDEX	The index consisting of 2 EOO companies with and 13

market capitalizations.

	1 11 11 11 11 11 11 11
	Currency-hedged index uses rolling one-month forward exchange contracts as hedging instruments. Total return in U.S. dollars.
SIX-MONTH CD RATES	Estimated monthly return averaging the top rates paid by major New York banks on primary new issues of negotiable CDs. Published by Micropal.
STANDARD & POOR'S (S&P 500)	500 Consists of 500 widely held common stocks within four sectors (industrials, utilities, financial, and transportation). This index, calculated by Standard & Poor's, is a total return index with dividends reinvested.

INDEX

WILSHIRE MIDCAP GROWTH Overlaps both the top 750 and the next 1750 of the Wilshire 2500 universe. Includes companies that have market capitalizations ranging from \$300 million to

\$1.3 billion.

Securities Index

Wilshire Real Estate A market capitalization weighted index of publicly traded real estate securities such as Real Estate Investment Trusts (REITs), Real Estate Operating Companies (REOCs), and partnerships. The index is comprised of companies whose charter is the equity ownership and operation of commercial real estate.

·/ PUU.													

^{*}Annualized.

^{**}The portfolio turnover rate excludes mortgage dollar roll transactions.

***The portfolio turnover rate excludes transactions related to the liquidation of the Investment Grade Intermediate Bond Fund and the Adjustable U.S. Government Fund and mortgage dollar roll transactions.

****Relates to purchases and sales of equity securities. Prior to December 31, 1996, disclosure of average commission rate was not required. +Total return is not annualized.

++Per share amounts have been calculated using the average shares outstanding during the period. 1For the period March 15, 1994 (effective date) to December 31, 1994. 2For the period April 19, 1995 (seed date) to December 31, 1995. 3For the period November 1, 1995 (effective date) to December 31, 1995. 4For the period May 1, 1996 (effective date) to December 31, 1996. 5For the period November 8, 1996 (effective date) to December 31, 1996. 6During the periods indicated below, Franklin Advisers, Inc., the investment manager, agreed to waive in advance a portion of its management fees and made payments of other expenses incurred by the Funds in the Trust. Had such action not been taken, the ratio of expenses to average net assets would have been as follows:

FRANKLIN VALUEMARK FUNDS Notes to Financial Statements

1. ORGANIZATION AND SIGNIFICANT ACCOUNTING POLICIES

Franklin Valuemark Funds (the Trust) is registered under the Investment Company Act of 1940, as an open-end investment company, consisting of twenty-three

series (the Funds). All Funds are diversified except the Templeton Global Income Securities Fund. Shares of the Funds are sold only to insurance company separate accounts to fund the benefits of variable life insurance policies or variable annuity contracts issued by Allianz Life Insurance Company of North America (Allianz Life), and its affiliates. The Funds and their investment policies are: <TABLE> <CAPTION>

<S> Capital Growth Capital Growth Fund Mutual Discovery Securities Fund Natural Resources Fund Small Cap Fund Templeton Developing Markets Equity Fund Rising Dividends Fund Templeton Global Growth Fund

Templeton International Equity Fund Templeton International Smaller Companies Fund Templeton Pacific Growth Fund </TABLE>

<C> Growth and Income Growth and Income Fund Income Securities Fund Real Estate Securities Fund Templeton Global Asset Allocation Fund Utility Equity Fund

<C> High Current Income Capital Preservation and Income Money Market Fund High Income Fund Templeton Global Income Securities Fund Mutual Shares Securities Fund U.S. Government Securities Fund Zero Coupon Fund - 2000 Zero Coupon Fund - 2005

Zero Coupon Fund - 2010

Effective May 1, 1997, the name of the Precious Metals Fund changed to the Natural Resources Fund. Before May 1, 1997, the portfolio had different investment objectives and policies.

The following summarizes the Funds' significant accounting policies.

a. Security Valuation:

Securities listed or traded on a recognized national exchange or NASDAQ are valued at the latest reported sales price. Over-the-counter securities and listed securities for which no sale is reported are valued within the range of the latest quoted bid and asked prices. Restricted securities and securities for which market quotations are not readily available are valued at fair value as determined by management in accordance with procedures established by the Board of Trustees (the Board).

Portfolio securities in the Money Market Fund are valued at amortized cost which approximates value.

b. Foreign Currency Translation:

Portfolio securities and other assets and liabilities denominated in foreign currencies are translated into U.S. dollars based on the exchange rate of such currencies against U.S. dollars on the date of valuation. Purchases and sales of securities and income items denominated in foreign currencies are translated into U.S. dollars at the exchange rate in effect on the transaction date.

The Funds do not separately report the effect of changes in foreign exchange rates from changes in market prices on securities held. Such changes are included in net realized and unrealized gain or loss from investments.

Realized foreign exchange gains or losses arise from sales of foreign currencies, currency gains or losses realized between the trade and settlement dates on securities transactions and the difference between the recorded amounts of dividends, interest, and foreign withholding taxes and the U.S dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in foreign exchange rates on foreign denominated assets and liabilities other than investments in securities held at the end of the reporting period.

1. ORGANIZATION AND SIGNIFICANT ACCOUNTING POLICIES (cont.)

c. Repurchase Agreements:

Certain Funds may enter into a joint repurchase agreement whereby their uninvested cash balance is deposited into a joint cash account to be used to invest in one or more repurchase agreements. The value and face amount of the joint repurchase agreement are allocated to the Funds based on their pro-rata interest. Repurchase agreements are accounted for as a loan by the Funds to the seller, collateralized by securities which are delivered to the Funds' custodian. The market value, including accrued interest, of the initial collateralization is required to be at least 102% of the dollar amount invested by the Funds, with the value of the underlying securities marked to market daily to maintain coverage of at least 100%. At December 31, 1997, all outstanding repurchase agreements held by the Funds had been entered into on that date.

d. Forward Exchange Contracts:

The Mutual Discovery Securities Fund, the Mutual Shares Securities Fund, the Templeton Global Asset Allocation Fund and the Templeton Global Income Securities Fund may enter into forward exchange contracts to hedge against foreign exchange risks. These contracts are valued daily and the Funds' equity therein is included in the Statement of Assets and Liabilities. Realized and unrealized gains and losses are included in the Statement of Operations.

e. Securities Sold Short:

The Mutual Shares Securities Fund is engaged in selling securities short, which obligates the Fund to replace a security borrowed by purchasing the same security at the current market value. The Fund would incur a loss if the price of the security increases between the date of the short sale and the date on which the Fund replaces the borrowed security. The Fund would realize a gain if the price of the security declines between those dates.

The Fund is required to establish a margin account with the broker lending the security sold short. While the short sale is outstanding, the broker retains the proceeds of the short sale and the Fund must maintain a deposit with the broker consisting of cash and securities having a value equal to a specified percentage of the value of the securities sold short.

f. Income Taxes:

No provision has been made for income taxes because each Fund's policy is to qualify as a regulated investment company under the Internal Revenue Code and distribute all of its taxable income.

g. Security Transactions, Investment Income, Expenses and Distributions:

Security transactions are accounted for on trade date. Realized gains and losses on security transactions are determined on a specific identification basis. Interest income and estimated expenses are accrued daily. Bond discount is amortized on an income tax basis. Dividend income and distributions to shareholders are recorded on the ex-dividend date. For the Money Market Fund, distributions from net investment income and capital gains or losses are normally declared and reinvested daily.

Common expenses incurred by the Trust are allocated among the Funds based on the ratio of net assets of each Fund to the combined net assets. Other expenses are charged to each Fund on a specific identification basis.

Distributions received by the Trust from securities may be a return of capital (ROC). Such distributions reduce the cost basis of the securities, and any distributions in excess of the cost basis are recognized as capital gains.

h. Accounting Estimates:

The preparation of financial statements in accordance with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

2. SHARES OF BENEFICIAL INTEREST

At December 31, 1997, there were an unlimited number of shares authorized (\$0.01 par value). Transactions in the Funds' shares were as follows: <TABLE> <CAPTION>

***During the fiscal year ended December 31, 1996, the U.S. Government Securities Fund acquired the net assets of the Investment Grade Intermediate Bond Fund and the Adjustable U.S. Government Fund pursuant to a plan of reorganization approved by Funds' shareholders.

3. TRANSACTIONS WITH AFFILIATES

Certain officers and trustees of the Trust are also officers and/or directors of the following entities:

Entity Franklin Templeton Services, Inc. (FT Services)	Affiliation Administrative manager
Franklin Advisers, Inc. (Advisers)	Investment manager
Franklin Advisory Services, Inc.	Investment manager
(Advisory Services)	
Franklin Mutual Advisers, Inc. (Franklin Mutual)	Investment manager
Templeton Asset Management Ltd. (TAML)	Investment manager
Templeton Global Advisors Ltd. (TGAL)	Investment manager
Templeton Investment Counsel, Inc. (TICI)	Investment manager
Franklin/Templeton Distributors, Inc. (Distributors)	Principal underwriter
Franklin/Templeton Investor Services, Inc.	Transfer agent
(Investor Services)	

3. TRANSACTIONS WITH AFFILIATES (cont.)

The Funds pay an investment management fee to Advisers based on the average net assets of the Funds, except the Capital Growth Fund, the Mutual Discovery Securities Fund, the Mutual Shares Securities Fund, the Rising Dividends Fund, the Small Cap Fund, the Templeton Developing Markets Equity Fund, the Templeton Global Asset Allocation Fund, the Templeton Global Growth Fund, the Templeton International Equity Fund, the Templeton International Smaller Companies Fund and the Templeton Pacific Growth Fund as follows:

Annualized Fee Rate	Average Daily Net Assets
.625 of 1%	First \$100 million
.500 of 1%	over \$100 million, up to and including \$250 million
.450 of 1%	over \$250 million, up to and including \$10 billion

Fees are further reduced on net assets over \$10\$ billion.

Under a subadvisory agreement, TICI provides subadvisory services to the Templeton Global Income Securities Fund and receives from Advisers fees based on the average daily net assets of the Fund.

The Templeton International Equity Fund and the Templeton Pacific Growth Fund pay an investment management fee to Advisers based on the average net assets of the Funds as follows:

Annualized Fee Rate	Average Daily Net Assets
1%	First \$100 million
.90 of 1%	over \$100 million, up to and including \$250 million
.80 of 1%	over \$250 million, up to and including \$500 million

Fees are further reduced on net assets over \$500 million.

Under a subadvisory agreement, TICI provides subadvisory services to the Templeton International Equity Fund and the Templeton Pacific Growth Fund, and receives from Advisers fees based on the average daily net assets of each Fund.

The Capital Growth Fund and the Small Cap Fund pay an investment management fee to Advisers based on the average net assets of the Funds as follows:

Annualized Fee Rate	Average Daily Net Assets
.750 of 1%	First \$500 million
.625 of 1%	over \$500 million, up to and including \$1 billion
.500 of 1%	over \$1 billion

The Rising Dividends Fund pays an investment management fee to Advisory Services based on the average net assets as follows:

Annualized Fee Rate	Average Daily Net Assets
.750 of 1%	First \$500 million
.625 of 1%	over \$500 million, up to and including \$1 billion
.500 of 1%	over \$1 billion

The Templeton Global Growth Fund pays an investment management fee to TGAL based on the average net assets of the Fund as follows:

Fees are further reduced on net assets over \$500 million.

3. TRANSACTIONS WITH AFFILIATES (cont.)

The Templeton Global Asset Allocation Fund pays an investment management fee to TGAL based on the average net assets of the Fund as follows:

Annualized Fee Rate	Average Daily Net Assets
.650 of 1%	First \$200 million
.585 of 1%	over \$200 million, up to and including \$1.3 billion
.520 of 1%	over \$1.3 billion

Under a subadvisory agreement, TICI provides subadvisory services to the Templeton Global Asset Allocation Fund and receives from TGA fees based on the average daily net assets of the Fund.

The Templeton International Smaller Companies Fund pays an investment management fee to TICI based on the average net assets of the Fund as follows:

Annualized Fee Rate	Average Daily Net Assets
.850 of 1%	First \$200 million
.765 of 1%	over $$200 \text{ million}, \text{ up to and including } 1.3 billion
.680 of 1%	over \$1.3 billion

The Mutual Discovery Securities Fund and the Mutual Shares Securities Fund pay an investment management fee to Franklin Mutual of .80 and .60 of 1%, respectively, per year of the average daily net assets of each Fund.

The Templeton Developing Markets Equity Fund pays an investment management fee to TAML of 1.25 of 1% per year of the average daily net assets of the Fund.

Under an agreement with their respective investment managers, FT Services provides administrative services to the Funds, except for the Mutual Discovery Securities Fund, the Mutual Shares Securities Fund, the Templeton Global Asset Allocation Fund and the Templeton International Smaller Companies Fund. The fee is paid by Advisers based on the average daily net assets, and is not an additional expense of the Funds.

The Mutual Discovery Securities Fund, the Mutual Shares Securities Fund, the Templeton Global Asset Allocation Fund and the Templeton International Smaller Companies Fund pay business management fees to FT Services based on the average net assets of the Funds as follows:

```
Annualized Fee Rate Average Daily Net Assets

.150 of 1% First $200 million

.135 of 1% over $200 million, up to and including $700 million

.100 of 1% over $700 million, up to and including $1.2 billion

Fees are further reduced on net assets over $1.2 billion.
```

Advisers agreed in advance to waive a portion of the management fees for the Money Market Fund, the Zero Coupon Fund - 2000, the Zero Coupon Fund - 2005, and the Zero Coupon Fund - 2010, through December 31, 1997, as noted in the Statement of Operations.

Distribution plans are included in the management agreements of the Funds. No payments were made by any Fund as a result of the plans.

Investor Services, under terms of an agreement, performs shareholder servicing for the Funds and is not paid by the Funds for the services.

4. INCOME TAXES

At December 31, 1997, the following Funds had deferred capital losses [deferred currency losses] occurring subsequent to October 31, 1997. For tax purposes, such losses will be reflected in the year ending December 31, 1998.

<TABLE>

<CAPTION>

</TABLE>

At December 31, 1997, the net unrealized appreciation (depreciation) based on the cost of investments for income tax purposes were as follows:

4. INCOME TAXES (cont.)

At December 31, 1997, the Funds had tax basis capital losses which may be carried over to offset future capital gains. Such losses expire as follows: <TABLE> <CAPTION>

				Templeton	
	Capital	Money	Natural	Global IncomeU	.S. Government
	Growth Fund	Market Fund	Resources Fund	Securities Fund	Securities Fund
Capital loss carryovers expiring in:

</TABLE>

Net investment income differs for financial statement and tax purposes primarily due to differing treatments of defaulted securities, foreign currency transactions and passive foreign investment company shares.

Net realized capital gains (losses) differ for financial statement and tax purposes primarily due to differing treatments of wash sales, foreign currency transactions and passive foreign investment company shares.

5. INVESTMENT TRANSACTIONS

Purchases and sales of securities (excluding short-term securities) for the year ended December 31, 1997 were as follows:

6. FINANCIAL INSTRUMENTS WITH OFF-BALANCE SHEET RISK

Each of the Funds listed below has been a party to financial instruments with off-balance-sheet risk, primarily forward exchange contracts, in order to minimize the impact on the Funds from adverse changes in the relationship between the U.S. dollar and foreign currencies and interest rates. These instruments involve market risk in excess of the amount recognized on the Statement of Assets and Liabilities. Some of these risks have been minimized by offsetting contracts. Risks arise from the possible inability of counterparties to meet the terms of their contracts, future movement in currency values and interest rates and contract positions that are not exact offsets. The contract amount indicates the extent of the Funds' involvement in such contracts.

A forward exchange contract is an agreement between two parties to exchange different currencies at a specific rate at an agreed future date. At December 31, 1997, the Funds have outstanding forward exchange contracts for the sale or purchase of currencies as set out below. The contracts are reported in the financial statements at the Funds' net equity, as measured by the difference between the forward exchange rates at the reporting date and the forward exchange rates at the day of entry into the contract.

7. CREDIT RISK AND DEFAULTED SECURITIES

The High Income Fund and the Income Securities Fund have 93.5% and 37.2%, respectively, of their portfolios invested in lower rated and comparable quality unrated high yield securities, which tend to be more sensitive to economic conditions than higher rated securities. The risk of loss due to default by the issuer may be significantly greater for the holders of high yielding securities because such securities are generally unsecured and are often subordinated to other creditors of the issuer. At December 31, 1997 the Income Securities Fund held defaulted security with a value of \$1,650,000 representing .1% of the Fund's net assets. For information as to specific securities, see the accompanying Statement of Investments.

For financial reporting purposes, the Funds discontinue accruing income on defaulted bonds and provide an estimate for losses on interest receivable.

The High Income Fund has investments in excess of 10% of their total net assets in the Wireless Communication industry. Such concentration may subject the Fund more significantly to economic changes occuring within that industry.

8. RESTRICTED SECURITIES

The Funds may purchase securities through a private offering that generally cannot be sold to the public without prior registration under the Securities Act of 1933. The costs of registering such securities are paid by the issuer. Restricted securities held at December 31, 1997 are as follows:

9. LENDING OF PORTFOLIO SECURITIES

The Income Securities Fund, the Natural Resources Fund, the Real Estate Securities Fund, the Small Cap Fund, and the Utility Equity Fund loan securities to certain brokers for which it receives cash collateral against the loaned securities in an amount equal to at least 102% of the market value of the loaned securities. Net interest income from the investment of the cash collateral received and the value of the loaned securities at December 31, 1997 were as follows:

10. OTHER CONSIDERATIONS

Advisers, as the manager for the Income Securities Fund, may serve as a member of various credit committees, representing credit interests in certain corporate restructuring negotiations. Currently, Advisers serves on the credit committees for Harvard Industries, Inc. As a result of this involvement, Advisers may be in possession of certain material non-public information. Advisers has not nor does it intend to sell any of its holdings in these securities while in possession of this information.

FRANKLIN VALUEMARK FUNDS
Report of Independent Accountants

To the Shareholders and Board of Trustees of Franklin Valuemark Funds:

We have audited the accompanying statements of assets and liabilities of each of the twenty-three Funds comprising the Franklin Valuemark Funds including each Fund's statement of investments, as of December 31, 1997, and the related statements of operations for the year then ended, the statements of changes in net assets for each of the two years in the period then ended, and the financial highlights for each of the periods presented. These financial statements and financial highlights are the responsibility of the Funds' management. Our responsibility is to express an opinion on these financial statements and financial highlights based on our audits.

We conducted our audits in accordance with generally accepted auditing standards. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements and financial highlights are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. Our procedures included confirmation of securities owned as of December 31, 1997, by correspondence with the custodians and brokers. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements and financial highlights referred to above present fairly, in all material respects, the financial position of each of the Funds comprising the Franklin Valuemark Funds, as of December 31, 1997, the results of their operations for the year then ended, the changes in their net assets for each of the two years in the period then ended, and their financial highlights for each of the periods presented, in conformity with generally accepted accounting principles.
