☒

Annual Information Form

☒

Audited Annual Financial Statements

Indicate the number of outstanding shares of each of the registrant's classes of capital or common stock as of the close of the period covered by the annual report: 103,555,211 common shares were outstanding as at December 31, 2024.

Indicate by check mark whether the Registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports); and (2) has been subject to such filing requirements for the past 90 days.

☒ Yes No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files).

☒ Yes No

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 12b-2 of the Exchange Act.

Emerging growth company

If an emerging growth company that prepares its financial statements in accordance with U.S. GAAP, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report.

☒

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements. ☐

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b). ☐

FORWARD LOOKING STATEMENTS

This Annual Report of Ero Copper Corp. (the “Company”) on Form 40-F, including the exhibits hereto (collectively, the “Annual Report”), includes certain statements that constitute “forward-looking statements” and “forward-looking information” within the meaning of applicable Canadian securities laws and United States securities laws (collectively, “forward-looking statements”). The disclosure provided under “Cautionary Note Regarding Forward Looking Statements” on pages 3 through 6 of the Company’s Annual Information Form for the year ended December 31, 2024 (the “AIF”), attached hereto as Exhibit 99.1, is incorporated by reference herein. Forward-looking information contained in, or incorporated by reference into, this Annual Report are made as of the date of this Annual Report and the Company disclaims any obligation to update or revise any forward-looking statement, whether as a result of new information, future events or results or otherwise, except as and to the extent required by applicable securities laws.

RESOURCE AND RESERVE ESTIMATES

The disclosure provided under “Cautionary Note Regarding Mineral Resource and Mineral Reserve Estimates” on pages 8 through 9 of the AIF, attached hereto as Exhibit 99.1, is incorporated by reference herein.

DISCLOSURE CONTROLS AND PROCEDURES

A. Evaluation of disclosure controls and procedures.

Disclosure controls and procedures are designed to ensure that (i) information required to be disclosed by the Company in reports that it files or submits to the Commission under the Securities Exchange Act of 1934, as amended (the “Exchange Act”), is recorded, processed, summarized and reported within the time periods specified in applicable rules and forms and (ii) material information required to be disclosed in the Company's reports filed under the Exchange Act is accumulated and communicated to the Company's management, including its Chief Executive Officer (“CEO”) and Chief Financial Officer (“CFO”), as appropriate, to allow for timely decisions regarding required disclosure.

At the end of the period covered by this Annual Report, an evaluation was carried out under the supervision of and with the participation of the Company's management, including the CEO and CFO, of the effectiveness of the design and operation of the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) and Rule 15d-15(e) under the Exchange Act). The evaluation included documentation review, enquiries and other procedures considered by management to be appropriate in the circumstances. Based on that evaluation, the Company's CEO and CFO have concluded that, as of the end of the period covered by this Annual Report, the Company's disclosure controls and procedures were effective. The disclosure provided under “Disclosure Controls and Procedures and Internal Control Over Financial Reporting” on page 35 of the Management's Discussion & Analysis for the financial year ended December 31, 2024 (the “MD&A”), attached hereto as Exhibit 99.2, is incorporated by reference.

B. Management's annual report on internal control over financial reporting.

The disclosure provided under “Disclosure Controls and Procedures and Internal Control Over Financial Reporting” on page 35 of the MD&A, attached hereto as Exhibit 99.2, is incorporated by reference.

C. Attestation Report of the Independent Registered Public Accounting Firm

KPMG LLP, Chartered Professional Accountants, Vancouver, British Columbia, Canada, Audit Firm ID: 85 (“KPMG”) acted as the independent external auditor of the Company for the financial year ended December 31, 2024. The attestation report of KPMG on management’s assessment of the Company's internal control over financial reporting is included in the “Report of Independent Registered

Public Accounting Firm” filed with the Audited Consolidated Financial Statements for the years ended December 31, 2024 and 2023, attached hereto as Exhibit 99.3, and is incorporated by reference herein.

D. Changes in internal control over financial reporting.

During the period covered by this Annual Report, no change occurred in the Company's internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

The Company's management, including the CEO and CFO, does not expect that its disclosure controls and procedures or internal controls and procedures will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions; over time, control may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Given the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

IDENTIFICATION OF THE AUDIT COMMITTEE AND FINANCIAL EXPERT

The Company has a separately-designated standing audit committee (the "Audit Committee") in accordance with section 3(a)(58)(A) of the Exchange Act. As at December 31, 2024 and the date of the Annual Report, the Audit Committee consists of Jill Angevine (Chair), Lyle Braaten, Faheem Tejani and John Wright, all of whom are independent under the criteria of Rule 10A-3 of the Exchange Act as required by the New York Stock Exchange (the "NYSE").

The Company's board of directors (the "Board") has determined that each of Ms. Angevine and Mr. Tejani are an "audit committee financial expert" within the meaning of the Commission's rules. The Commission has indicated that the designation of Ms. Angevine and Mr. Tejani as an audit committee financial expert does not make any of them an "expert" for any purpose, does not impose on Ms. Angevine and Mr. Tejani any duties, obligations or liability that are greater than those imposed on any of them as a member of the Audit Committee and the Board in the absence of such designation, and does not affect the duties, obligations or liability of any other member of the Audit Committee or Board.

The Audit Committee's mandate sets out its responsibilities and duties, qualifications for membership, procedures for committee appointment and reporting to the Board. A copy of the current mandate is attached to the AIF as Appendix A (see Exhibit 99.1) and is available on the Company's website at www.erocopper.com.

CODE OF CONDUCT

The Company has adopted a Code of Business Conduct and Ethics (the "Code of Ethics") that applies to its officers and employees, including the CEO, CFO, principal accounting officer or controller and persons performing similar functions. A copy of the Code of Ethics is available on the Company's website at www.erocopper.com.

During the financial year ended December 31, 2024, no waivers of the Code of Ethics were granted and the Company did not make any amendments to its Code of Ethics. All amendments to the Code of Ethics, and all waivers of the Code of Ethics with respect to any of the officers covered by it, will be posted on the Company's website at www.erocopper.com.

PRINCIPAL ACCOUNTANT FEES AND SERVICES

KPMG acted as the independent external auditor of the Company for the financial year ended December 31, 2024.

The information provided under the heading “Audit Committee” on pages 122 through 124 of the AIF, attached hereto as Exhibit 99.1, is incorporated by reference herein. See page 124 of the AIF for the total amount billed to the Company by KPMG for services performed in the last two fiscal years by category of service (for audit fees, audit-related fees, tax fees, and other fees) in U.S. dollars. No audit-related fees, tax fees or other non-audit fees were approved by the Audit Committee pursuant to paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

OFF-BALANCE SHEET TRANSACTIONS

The Company does not have any off-balance sheet transactions that have or are reasonably likely to have a current or future effect on the Company's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that are material to investors.

DISCLOSURE OF CONTRACTUAL OBLIGATIONS

The disclosure provided under "Contractual Obligations and Commitments" on page 18 of the MD&A for the financial year ended December 31, 2024, attached hereto as Exhibit 99.2, is incorporated by reference herein.

CORPORATE GOVERNANCE PRACTICES

There are certain differences between the corporate governance practices applicable to the Company and those applicable to U.S. companies under NYSE listing standards. A summary of the significant differences can be found on the Company's website at www.erocopper.com.

UNDERTAKINGS

The Company undertakes to make available, in person or by telephone, representatives to respond to inquiries made by the Commission staff, and to furnish promptly, when requested to do so by the Commission staff, information relating to: the securities registered pursuant to Form 40-F; the securities in relation to which the obligation to file an annual report on Form 40-F arises; or transactions in said securities.

CONSENT TO SERVICE OF PROCESS

The Company has previously filed with the Commission a written consent to service of process and power of attorney on Form F-X with respect to the class of securities in relation to which the obligations to file this Annual Report arises. Any change to the name or address of the Company's agent for service shall be communicated promptly to the Commission by amendment to the Form F-X referencing the file number of the Company.

Name: Deepk Hundal

Title: Executive Vice President, General Counsel and
Corporate Secretary

Date: March 6, 2025

**AMENDED AND RESTATED INCENTIVE COMPENSATION CLAWBACK
POLICY
ERO COPPER CORP
(the “Company”)**

This amended and restated incentive compensation clawback policy (the “**Clawback Policy**”) authorizes the Board of Directors of the Company (the “**Board**”) or the Compensation Committee to recover Excess Compensation from an Executive Officer (such terms as defined below) in certain instances and is intended to satisfy the clawback policy requirements of the New York Stock Exchange Listing Requirements (the “**NYSE Rules**”). The principal terms of this Clawback Policy are set forth below.

Defined Terms

For the purposes of this Clawback Policy, the following terms are defined below:

- a. “**Clawback Period**” means the period consisting of any of the three fiscal completed years (and any transition period resulting from a change in the Company’s fiscal year) immediately preceding the later of: (a) the date that the Board (or Audit Committee) concludes, or reasonably should have concluded, that the Company is required to prepare a Financial Restatement, or (b) the date that a court, regulator, or other legally authorized body directs the Company to prepare a Financial Restatement. For the avoidance of doubt, the Clawback Period applies to Performance-Based Compensation received by an Executive Officer during the three-year period described above (y) after beginning services as an Executive Officer (including compensation derived from an award authorized before the individual is newly hired as an Executive Officer, e.g., inducement grants) and (z) if that person served as an Executive Officer at any time during the performance period for such Performance-Based Compensation;
- b. “**Excess Compensation**” means the difference between the amount or value of any Performance-Based Compensation received during the Clawback Period by an Executive Officer that exceeds the amount or value of Performance-Based Compensation that otherwise would have been received had it been determined based on the Financial Restatement (and shall include an entire amount or value of an award or payment where it is determined that no award or payment would have been made based on the Financial Restatement);
- b. “**Executive Officer**” means any individual at the Vice-President level or above and any other officer or any other person who performs a significant policy-making function for the Company or who is in charge of a principal business unit, division, or function, whether currently or previously employed by the Company or any of its subsidiary companies;
- c. “**Financial Restatement**” means any required accounting restatement due to material noncompliance of the Company with any financial reporting requirement under applicable securities laws, including any required accounting restatement to correct an error in previously issued financial statements of the Company that is material to the previously issued financial statements, or that would result in a material misstatement if the error were corrected in the current period;
- d. “**Performance-Based Compensation**” includes all compensation, in any form, including cash or equity-based, whether vested or unvested, that is granted, earned or vested based wholly or in part upon the attainment of any financial reporting measure. Financial reporting measures are those that are determined and presented in

accordance with the accounting principles used in preparing the Company's financial statements and any measures derived wholly or in part from such financial measures (including non-GAAP measures, stock price and total shareholder return). For the avoidance of doubt, Performance-Based Compensation does not include (i) base annual salary, (ii) compensation which is awarded based solely on service to the Company (e.g., a time-vested award, including time-vesting stock options or restricted share units), or (iii) compensation which is awarded based solely on subjective standards, strategic measures (e.g., completion of a merger) or operational measures (e.g., attainment of a certain market share). Performance-Based Compensation for purposes of this Clawback Policy shall be deemed

“received” in the Company’s fiscal period during which the financial reporting measure is attained, even if the payment or grant occurs after the end of that fiscal period.

Recovery Process and Manner of Repayment

Where there is a Financial Restatement, the Board or the Compensation Committee shall:

- a. require that the Executive Officer return or repay to the Company, or reimburse the Company for, all or part of the pre-tax portion of any Excess Compensation; and/or
- b. cause all or part of any awarded and unpaid or unexercised Performance-Based Compensation (whether vested or unvested) that constitutes Excess Compensation for such Executive Officer to be cancelled.

For Performance-Based Compensation based on stock price or total shareholder return, where the amount of the Excess Compensation is not subject to mathematical recalculation directly from the information in the Financial Restatement:

- a. the amount shall be based on a reasonable estimate of the effect of the Financial Restatement on the stock price or total shareholder return upon which the Performance-Based Compensation was received; and
- b. the Company shall maintain and provide documentation of the determination of that reasonable estimate to the New York Stock Exchange (“NYSE”).

Any compensation subject to recovery under this Clawback Policy shall be limited to Performance-Based Compensation received on or after the Effective Date and shall be without regard to any fault, misconduct, responsibility or involvement of the Executive Officer in the material non-compliance that resulted in the Financial Restatement.

In the event of a Financial Restatement, the Company shall recover Excess Compensation related to Performance-Based Compensation, except to the extent that the Board or the Compensation Committee has determined that recovery would be impracticable because: (1) the direct costs paid to a third party to assist with enforcing recovery would exceed the Excess Compensation and prior to making such determination, the Company has made a reasonable and documented attempt to recover such Excess Compensation and has provided that documentation to the NYSE, or (2) the recovery of such Excess Compensation would, based on an opinion of counsel, violate the home-country laws of the Company.

If the Board or the Compensation Committee makes a determination that Excess Compensation is subject to the Clawback Policy, the Board or the Compensation Committee, as the case may be, shall make a written demand for repayment and/or reimbursement from the Executive Officer, and in the event that the Executive Officer does not, within a reasonable period, tender repayment and/or reimbursement in response to such demand, the Board or the Compensation Committee, as the case may be, shall be entitled to pursue such other actions or remedies, including, without limitation, legal recourse, against the Executive Officer to obtain such repayment and/or reimbursement, as applicable.

In the event the Board or the Compensation Committee makes a determination to cancel any awarded and unpaid or unexercised Performance-Based Compensation (whether vested or unvested) which constitutes Excess Compensation with respect to any Executive Officer under the Clawback Policy, such cancellation will be effected as soon as reasonably practicable upon such determination.

General Provisions

The Company will not indemnify or provide insurance to cover any repayment of Excess Compensation in accordance with this Clawback Policy.

All determinations and decisions made by the Board or the Compensation Committee pursuant to the provisions of this Clawback Policy shall be final, conclusive and binding on the Company, its subsidiaries and the persons to whom this Clawback Policy applies.

Documentation of any Excess Compensation required to be clawed back under the NYSE Rules shall be maintained and may be provided to NYSE as required by the NYSE Rules.

Changes to this Clawback Policy

The Board reserves the right, at its absolute discretion, to change this Clawback Policy from time to time as it considers necessary, provided that any such changes shall be permitted under the NYSE Rules.

Acknowledgement

All Executive Officers will be asked to sign the Acknowledgment attached hereto, but the Clawback Policy will be applicable to each Executive Officer whether or not such Acknowledgment is signed.

**Adopted by the Company on November 28, 2023, and effective as of October 2, 2023
(the “Effective Date”).**

ACKNOWLEDGMENT

TO: Ero Copper Corp. (“**Company**”)

RE: **AMENDED AND RESTATED INCENTIVE COMPENSATION CLAWBACK POLICY** (effective as of October 2, 2023)

I, the undersigned, have been given a copy of Ero Copper Corp.’s Amended and Restated Incentive Compensation Clawback Policy prior to the date hereof and hereby acknowledge that I have read it, understand it and agree to abide by it.

PRELIMINARY NOTES

Date of Information

In this Annual Information Form (“**AIF**”), Ero Copper Corp., together with its subsidiaries, as the context requires, is referred to as “**Ero**”, “**Ero Copper**” or the “**Company**”. All information contained herein is presented as at December 31, 2024, unless otherwise stated.

Currency

All dollar amounts in this AIF are expressed in Canadian dollars, except as otherwise indicated. References to “\$” or “dollars” are to Canadian dollars, references to “US\$” and “USD” are to US dollars and references to “R\$” and “BRL” are to Brazilian Reais.

Cautionary Note Regarding Forward Looking Statements

This AIF contains “forward-looking statements” within the meaning of the United States Private Securities Litigation Reform Act of 1995 and “forward-looking information” within the meaning of applicable Canadian securities legislation (collectively, “**forward-looking statements**”). Forward-looking statements include statements that use forward-looking terminology such as “may”, “could”, “would”, “will”, “should”, “intend”, “target”, “plan”, “guidance”, “strategy”, “model”, “expect”, “budget”, “estimate”, “forecast”, “schedule”, “anticipate”, “believe”, “continue”, “potential”, “view”, “assume” or the negative or grammatical variation thereof or other variations thereof or comparable terminology. Forward-looking statements may include, but are not limited to, statements with respect to Mineral Reserve and Mineral Resource (as defined below) estimates; targeting additional Mineral Resources and expansion of deposits; capital and operating cost estimates and economic analyses (including cash flow projections), including those from the Caraíba Operations Technical Report (as defined below), the Xavantina Operations Technical Report (as defined below) and the Tucumã Project Technical Report (as defined below); the Company’s expectations, strategies and plans for the Caraíba Operations (as defined below), the Xavantina Operations (as defined below), the Tucumã Operations (as defined below) and the Furnas Project (as defined below), including the Company’s planned exploration, development, construction and production activities; the results of future exploration and drilling; estimated completion dates for certain milestones; successfully adding or upgrading Mineral Resources and successfully developing new deposits; the costs and timing of current and future exploration, development and construction including but not limited to the Deepening Extension Project (as defined below) at the Caraíba Operations; the duration of the ramp-up process and timing of commercial production at the Tucumã Operations; the timing and amount of future production at the Caraíba Operations, the Tucumã Operations and the Xavantina Operations; the timing, receipt and maintenance of necessary approvals, licenses and permits from applicable governments, regulators or third parties; expectations regarding consumption, demand and future price of copper, gold and other metals; future financial or operating performance and condition of the Company and its business, operations and properties, including expectations regarding liquidity, capital structure, competitive position and payment of dividends; the possibility of entering judgments outside of Canada; expectations regarding future currency exchange rates; and any other statement that may predict, forecast, indicate or imply future plans, intentions, levels of activity, results, performance or achievements.

Forward-looking statements are subject to a variety of known and unknown risks, uncertainties and other factors that could cause actual results, actions, events, conditions, performance or achievements to materially differ from those expressed or implied by the forward-looking statements, including, without limitation, risks related to:

- copper and gold prices are volatile and may be lower than expected;

- mining operations are risky;
- mining operations require geologic, metallurgic, engineering, title, environmental, economic and financial assessments that may be materially incorrect and thus the Company may not produce as expected;
- geotechnical, hydrological and climatic events could suspend mining operations or increase costs;

- actual production, capital and operating costs may be different than those anticipated;
- the Company's financial performance and results of operations are currently dependent on the Caraíba Operations and the successful ramp up of the Tucumã Operations;
- infectious diseases may affect the Company's business and operations;
- changes in climate conditions may affect the Company's operations;
- currency fluctuations can result in unanticipated losses;
- the successful operation of the Caraíba Operations, the Xavantina Operations and the Tucumã Operations depends on the skills of the Company's management and teams;
- operations during mining cycle peaks are higher cost;
- title to the Caraíba Operations, the Xavantina Operations, and/or the Tucumã Operations may be disputed;
- the Company may fail to comply with the law or may fail to obtain or renew necessary permits and licenses;
- the failure of a tailings dam could negatively impact the Company's business, reputation and results of operations;
- compliance with environmental regulations can be costly;
- social and environmental activism can negatively impact exploration, development, construction and mining activities;
- the construction and start-up of new mines and projects at existing mines is subject to a number of factors and the Company may not be able to successfully complete new construction projects;
- land reclamation and mine closure requirements may be burdensome and costly;
- the mining industry is intensely competitive;
- inadequate infrastructure may constrain mining operations;
- operating cash flow may be insufficient for future needs;
- fluctuations in the market prices and availability of commodities and equipment affect the Company's business;
- the Company is subject to restrictive covenants that limit its ability to operate its business;
- the Company's indebtedness could adversely affect its financial condition and prevent the Company from fulfilling its obligations under debt instruments;
- the Company may not be able to generate sufficient cash to service all of its indebtedness and may be forced to take other actions to satisfy its obligations under such indebtedness, which may not be successful;
- counterparties may default on their contractual obligations to the Company;
- a failure to maintain satisfactory labour relations can adversely impact the Company;
- the Company's insurance coverage may be inadequate to cover potential losses;
- it may be difficult to enforce judgments and effect service of process on directors, officers and experts named herein;
- the directors and officers may have conflicts of interest with the Company;
- future acquisitions may require significant expenditures and may result in inadequate returns;
- disclosure and internal control deficiencies may adversely affect the Company;
- failures of information systems or information security threats can be costly;
- the Company may be subject to costly legal proceedings;
- the Company may be subject to shareholder activism;
- product alternatives may reduce demand for the Company's products;
- a lowering or withdrawal of the ratings assigned to the Company's debt securities by rating agencies may increase the Company's future borrowing costs and reduce its access to capital;
- the Company's Brazilian operations are subject to political and other risks associated with operating in a foreign jurisdiction;
- the Company may be negatively impacted by changes to mining laws and regulations;

- a failure to maintain relationships with the communities in which the Company operates and other stakeholders may adversely affect the Company's business;
- inaccuracies, corruption and fraud in Brazil relating to ownership of real property may adversely affect the Company's business;
- the Company is exposed to the possibility that applicable taxing authorities could take actions that result in increased tax or other costs that might reduce the Company's cash flow;
- inflation in Brazil, along with Brazilian governmental measures to combat inflation, may have a significant negative effect on the Brazilian economy and also on the Company's financial condition and results of operations;

- foreign exchange rate instability may have a material adverse effect on the Brazilian economy;
- the Company's operations may be impaired as a result of restrictions to the acquisition or use of rural properties by foreign investors or Brazilian companies under foreign control;
- recent disruptions in international and domestic capital markets may lead to reduced liquidity and credit availability for the Company;
- the Company may be responsible for corruption and anti-bribery law violations;
- investors may lose their entire investment;
- dilution from equity financing could negatively impact holders of the common shares of the Company (the "**Common Shares**");
- equity securities are subject to trading and volatility risks;
- sales by existing shareholders can reduce share prices;
- the Company does not currently intend to pay dividends;
- public companies are subject to securities class action litigation risk;
- if securities or industry analysts do not publish research or publish inaccurate or unfavourable research about the Company's business, the price and trading volume of the Common Shares could decline; and
- global financial conditions can reduce the price of the Common Shares.

This list is not exhaustive of the factors that may affect any of the Company's forward-looking statements. Although the Company has attempted to identify important factors that could cause actual results, actions, events, conditions, performance or achievements to differ materially from those contained in forward-looking statements, there may be other factors that cause results, actions, events, conditions, performance or achievements to differ from those anticipated, estimated or intended.

Forward-looking statements are not a guarantee of future performance. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Forward-looking statements involve statements about the future and are inherently uncertain, and the Company's actual results, achievements or other future events or conditions may differ materially from those reflected in the forward-looking statements due to a variety of risks, uncertainties and other factors, including, without limitation, those referred to in this AIF under the heading "*Risk Factors*".

The Company's forward-looking statements are based on the assumptions, beliefs, expectations and opinions of management on the date the statements are made, many of which may be difficult to predict and beyond the Company's control. In connection with the forward-looking statements contained in this AIF, the Company has made certain assumptions about, among other things: favourable equity and debt capital markets; the ability to raise any necessary additional capital on reasonable terms to advance the production, development, construction and exploration of the Company's properties and assets; future prices of copper, gold and other metal prices; the timing and results of exploration and drilling programs; the accuracy of any Mineral Reserve and Mineral Resource estimates; the geology of the Caraíba Operations, the Xavantina Operations and the Tucumã Operations being as described in the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report, respectively; production costs; the accuracy of budgeted exploration, development and construction costs and expenditures; the price of other commodities such as fuel; future currency exchange rates, interest rates and tariff rates; operating conditions being favourable such that the Company is able to operate in a safe, efficient and effective manner; work force continuing to remain healthy in the face of prevailing epidemics, pandemics or other health risks, political and regulatory stability; the receipt of governmental, regulatory and third party approvals, licenses and permits on favourable terms; obtaining required renewals for existing approvals, licenses and permits on favourable terms; requirements under applicable laws; sustained labour stability; stability in financial and capital

goods markets; availability of equipment; positive relations with local groups and the Company's ability to meet its obligations under its agreements with such groups; and satisfying the terms and conditions of the Company's current loan arrangements. Although the Company believes that the assumptions inherent in forward-looking statements are reasonable as of the date of this AIF, these assumptions are subject to significant business, social, economic, political, regulatory, competitive and other risks and uncertainties, contingencies and other factors that could cause actual actions, events, conditions, results, performance or achievements to be materially different from those projected in the forward-looking statements. The Company cautions that the foregoing list of assumptions is not exhaustive. Other events or circumstances could cause actual results to differ materially from those estimated or projected and expressed in, or implied by, the forward-looking statements contained in this AIF.

Forward-looking statements contained herein are made as of the date of this AIF and the Company disclaims any obligation to update or revise any forward-looking statement, whether as a result of new information, future events or results or otherwise, except as and to the extent required by applicable securities laws.

Scientific and Technical Information

Except as set out below, scientific and technical information contained in this AIF relating to the Company's mining operations located within the Curaçá Valley, northeastern Bahia State, Brazil (the "**Caraíba Operations**" and formerly known as the MCSA Mining Complex), is derived from, and in some instances is a direct extract from, and based on the assumptions, qualifications and procedures set out in, the report prepared in accordance with National Instrument 43-101, *Standards of Disclosure for Mineral Projects* ("**NI 43-101**") and entitled "2022 Mineral Resources and Mineral Reserves of the Caraíba Operations, Curaçá Valley, Bahia, Brazil", dated December 22, 2022 with an effective date of September 30, 2022, prepared by Porfirio Cabaleiro Rodriguez, FAIG, Bernardo Horta de Cerqueira Viana, FAIG, Fábio Valério Câmara Xavier, MAIG and Ednie Rafael Moreira de Carvalho Fernandes, MAIG all of GE21 Consultoria Mineral Ltda. ("**GE21**"), Dr. Beck Nader, FAIG of BNA Mining Solutions ("**BNA**") and Alejandro Sepulveda, Registered Member (#0293) (Chilean Mining Commission) of NCL Ingeniería y Construcción SpA ("**NCL**") (the "**Caraíba Operations Technical Report**"). Each of Porfirio Cabaleiro Rodriguez, FAIG, Bernardo Horta de Cerqueira Viana, FAIG, Fábio Valério Câmara Xavier, MAIG, Ednie Rafael Moreira de Carvalho Fernandes, MAIG, Dr. Beck Nader, FAIG and Alejandro Sepulveda, Registered Member (#0293) (Chilean Mining Commission), reviewed and approved the scientific and technical information relating to the Caraíba Operations contained in this AIF, other than under the heading "*Caraíba Operations – Updated Information with respect to the Caraíba Operations*", and is a "qualified person" ("**QP**" or "**Qualified Person**") and "independent" of the Company within the meanings of NI 43-101. Information of a scientific and technical nature in respect of the Caraíba Operations set out in the AIF under the heading "*Caraíba Operations – Updated Information with respect to the Caraíba Operations*", has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148) and Resource Manager of the Company. Mr. Gonçalves is a "qualified person" within the meanings of NI 43-101.

Except as set out below, scientific and technical information contained in this AIF relating to the Company's mining operations located approximately 18 km west of the town of Nova Xavantina, southeastern Mato Grosso State, Brazil (the "**Xavantina Operations**" and formerly known as the "**NX Gold Mine**"), is derived from, and in some instances is a direct extract from, and based on the assumptions, qualifications and procedures set out in, the report prepared in accordance with NI 43-101 and entitled "Technical Report on the Xavantina Operations, Mato Grosso, Brazil", dated May 12, 2023 with an effective date of October 31, 2022, prepared by Porfirio Cabaleiro Rodriguez, FAIG, Leonardo de Moraes Soares, MAIG and Guilherme Gomides Ferreira, MAIG, all of GE21 (the "**Xavantina Operations Technical Report**"). Each of Porfirio Cabaleiro Rodriguez, FAIG, Leonardo de Moraes Soares, MAIG and Guilherme Gomides Ferreira, MAIG, reviewed and approved the scientific and technical information relating to the Xavantina Operations contained in this AIF, other than under the heading "*Xavantina Operations – Updated Information with respect to the Xavantina Operations*", and is a "qualified person" and "independent" of the Company within the meanings of NI 43-101. Information of a scientific and technical nature in respect of the Xavantina Operations set out in the AIF under the heading "*Xavantina Operations – Updated Information with respect to the Xavantina Operations*", has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148) and Resource Manager of the Company, who is a "qualified person" within the meanings of NI 43-101.

Except as set out below, scientific and technical information contained in this AIF relating to the Company's mining operation, located within southeastern Pará State, Brazil (referred to herein as the "**Tucumã Operations**" or by its former name, the "**Tucumã Project**" or the "**Boa Esperança Project**"), is derived from, and in some instances is a direct extract from, and

based on the assumptions, qualifications and procedures set out in, the report prepared in accordance with NI 43-101 and entitled “Boa Esperança Project NI 43-101 Technical Report on Feasibility Study Update”, dated November 12, 2021 with an effective date of August 31, 2021, prepared by Kevin Murray, P. Eng., Scott C. Elfen, P.E. (each of Ausenco Engineering Canada Inc.), Erin L. Patterson, P.E. (formerly employed by its affiliate Ausenco Engineering USA South Inc., and together with Ausenco Engineering Canada Inc., referred to as “**Ausenco**”), Carlos Guzmán, FAusIMM RM CMC of NCL and Emerson Ricardo Re, MSc, MBA, MAusIMM (CP) (No. 305892), Registered Member (No. 0138) (Chilean Mining Commission) and Resource Manager of the Company on the date of the report (now of HCM Consultoria

Geologica Eireli (“**HCM**”)) (the “**Tucumã Project Technical Report**”). Each of Kevin Murray, P. Eng., Erin L. Patterson, P.E., Scott C. Elfen, P.E., Carlos Guzmán, FAusIMM RM CMC and Emerson Ricardo Re, MAusIMM (CP), reviewed and approved the scientific and technical information relating to the Tucumã Project contained in this AIF, and is a “qualified person” of the Company within the meanings of NI 43-101 or, in the case of Erin L. Patterson, P.E., who is no longer employed by Ausenco, was a “qualified person” of the Company within the meanings of NI 43-101 on the date of the report. Each of Kevin Murray, P. Eng., Erin L. Patterson, P.E., Scott C. Elfen, P.E., and Carlos Guzmán, FAusIMM RM CMC is “independent” of the Company within the meanings of NI 43-101 or, in the case of Erin L. Patterson, P.E., was “independent” of the Company on the date of the report. Emerson Ricardo Re, MAusIMM (CP), as Resource Manager of the Company (on the date of the report and now of HCM), was not “independent” of the Company on the date of the report, within the meaning of NI 43-101. Information of a scientific and technical nature in respect of the Tucumã Operations set out in the AIF under the heading “*Tucumã Operations – Updated Information with respect to the Tucumã Operations*”, has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148) and Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

Reference should be made to the full text of the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report, each of which is available for review on the Company’s website at www.eroopper.com and under the Company’s profile on SEDAR+ at www.sedarplus.ca/landingpage/ and on EDGAR at www.sec.gov.

CIM Definition Standards

The Mineral Reserves and Mineral Resources for the Caraíba Operations (including as used in the Caraíba Operations Technical Report), the Xavantina Operations (including as used in the Xavantina Operations Technical Report), the Tucumã Operations (including as used in the Tucumã Project Technical Report) and the Furnas Project (including as used in the Furnas Project Technical Report) have been estimated in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (“**CIM**”) Definition Standards for Mineral Resources and Mineral Reserves adopted by the CIM Council on May 19, 2014 (the “**CIM Standards**” or “**CIM Definition Standards**”) and the CIM Estimation of Mineral Resources and Mineral Reserves Best Practice Guidelines, adopted by CIM Council on November 29, 2019 (the “**CIM Guidelines**”), which are incorporated by reference in NI 43-101. The following definitions are reproduced from the CIM Definition Standards:

“**Feasibility Study**” means a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable Modifying Factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study.

“**Indicated Mineral Resource**” means that part of a Mineral Resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors as described below in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An Indicated Mineral Resource has a lower level of confidence than that applying to a Measured Mineral Resource and may only be converted to a Probable Mineral Reserve.

“Inferred Mineral Resource” means that part of a Mineral Resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.

“Measured Mineral Resource” means that part of a Mineral Resource for which quantity, grade or quality, densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application

of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. A Measured Mineral Resource has a higher level of confidence than that applying to either an Indicated Mineral Resource or an Inferred Mineral Resource. It may be converted to a Proven Mineral Reserve or to a Probable Mineral Reserve.

“Mineral Reserve” means the economically mineable part of a Measured and/or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of Modifying Factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified. The reference point at which Mineral Reserves are defined, usually the point where the ore is delivered to the processing plant, must be stated. It is important that, in all situations where the reference point is different, such as for a saleable product, a clarifying statement is included to ensure that the reader is fully informed as to what is being reported. The public disclosure of a Mineral Reserve must be demonstrated by a Pre-Feasibility Study or Feasibility Study.

“Mineral Resource” means a concentration or occurrence of solid material of economic interest in or on the Earth’s crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

“Pre-Feasibility Study” means a comprehensive study of a range of options for the technical and economic viability of a mineral project that has advanced to a stage where a preferred mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, is established and an effective method of mineral processing is determined. It includes a financial analysis based on reasonable assumptions on the Modifying Factors and the evaluation of any other relevant factors which are sufficient for a qualified person, acting reasonably, to determine if all or part of the Mineral Resource may be converted to a Mineral Reserve at the time of reporting. A Pre-Feasibility Study is at a lower confidence level than a Feasibility Study.

“Probable Mineral Reserve” means the economically mineable part of an Indicated, and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Mineral Reserve is lower than that applying to a Proven Mineral Reserve.

“Proven Mineral Reserve” means the economically mineable part of a Measured Mineral Resource. A Proven Mineral Reserve implies a high degree of confidence in the Modifying Factors.

For the purposes of the CIM Definition Standards, **“Modifying Factors”** are considerations used to convert Mineral Resources to Mineral Reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

Cautionary Notes Regarding Mineral Resource and Mineral Reserve Estimates

Unless otherwise indicated, all reserve and resource estimates included in this AIF and the documents incorporated by reference herein have been prepared in accordance with NI 43-101 and the CIM Standards. NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Canadian standards, including NI 43-101, differ significantly from the

requirements of the United States Securities and Exchange Commission (the “**SEC**”), and reserve and resource information included herein may not be comparable to similar information disclosed by U.S. companies. In particular, and without limiting the generality of the foregoing, this AIF and the documents incorporated by reference herein use the terms “measured resources,” “indicated resources” and “inferred resources” as defined in accordance with NI 43-101 and the CIM Standards.

Further to recent amendments, mineral property disclosure requirements in the United States (the “**U.S. Rules**”) are governed by subpart 1300 of Regulation S-K of the U.S. Securities Act of 1933, as amended (the “**U.S. Securities Act**”) which differ from the CIM Standards. As a foreign private issuer that is eligible to file

reports with the SEC pursuant to the multi-jurisdictional disclosure system (the “MJDS”), Ero is not required to provide disclosure on its mineral properties under the U.S. Rules and will continue to provide disclosure under NI 43-101 and the CIM Standards. If Ero ceases to be a foreign private issuer or loses its eligibility to file its annual report on Form 40-F pursuant to the MJDS, then Ero will be subject to the U.S. Rules, which differ from the requirements of NI 43-101 and the CIM Standards.

Pursuant to the new U.S. Rules, the SEC recognizes estimates of “measured mineral resources”, “indicated mineral resources” and “inferred mineral resources”. In addition, the definitions of “proven mineral reserves” and “probable mineral reserves” under the U.S. Rules are now “substantially similar” to the corresponding standards under NI 43-101. Mineralization described using these terms has a greater amount of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, U.S. investors are cautioned not to assume that any measured mineral resources, indicated mineral resources, or inferred mineral resources that Ero reports are or will be economically or legally mineable. Further, “inferred mineral resources” have a greater amount of uncertainty as to their existence and as to whether they can be mined legally or economically. Under Canadian securities laws, estimates of “inferred mineral resources” may not form the basis of feasibility or pre-feasibility studies, except in rare cases. While the above terms under the U.S. Rules are “substantially similar” to the standards under NI 43-101 and CIM Standards, there are differences in the definitions under the U.S. Rules and CIM Standards. Accordingly, there is no assurance any mineral reserves or mineral resources that Ero may report as “proven mineral reserves”, “probable mineral reserves”, “measured mineral resources”, “indicated mineral resources” and “inferred mineral resources” under NI 43-101 would be the same had Ero prepared the reserve or resource estimates under the standards adopted under the U.S. Rules.

Alternative Performance (Non-IFRS) Measures

Financial results of the Company are prepared in accordance with the International Financial Reporting Standards (“IFRS”). The Company utilizes certain performance measures to monitor its performance, including copper C1 cash cost, copper C1 cash cost including foreign exchange hedges, realized copper price, gold C1 cash cost, gold all-in sustaining cost (“AISC”), realized gold price, earnings before interest, taxes, depreciation and amortization (“EBITDA”), adjusted EBITDA, adjusted net income attributable to owners of the Company, adjusted net income per share, net (cash) debt, working capital and available liquidity. These performance measures have no standardized meaning prescribed within generally accepted accounting principles under IFRS and, therefore, amounts presented may not be comparable to similar measures presented by other mining companies. These non-IFRS measures are intended to provide supplemental information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The reader is directed to the Management’s Discussion and Analysis of the Company for the year ended December 31, 2024 (see “Alternative Performance (Non-IFRS) Measures” section) for a reconciliation of these non-IFRS measures to the most directly comparable IFRS measures as contained in the Company’s audited consolidated financial statements for the years ended December 31, 2024 and 2023. Unless otherwise noted, the non-IFRS measures presented herein have been calculated on a consistent basis for the periods presented.

Copper C1 Cash Cost and Copper C1 Cash Cost including Foreign Exchange Hedges

Copper C1 cash cost and copper C1 cash cost including foreign exchange hedges are non-IFRS performance measures used by the Company to manage and evaluate the performance of its copper mining operations.

Copper C1 cash cost is calculated as C1 cash costs divided by total pounds of copper produced during the period. C1 cash costs comprise the total cost of production, including expenses related to transportation, and treatment and refining charges.

These costs are net of by-product credits, incentive payments and certain tax credits associated with sales invoiced to the Company's Brazilian customer.

Copper C1 cash cost including foreign exchange hedges is calculated as C1 cash costs, adjusted for realized gains or losses from its operational foreign exchange hedges, divided by total pounds of copper produced during the period. Although the Company does not apply hedge accounting in its consolidated financial statements and recognizes these contracts at fair value through profit or loss, the Company believes it appropriate to present cash costs including the impact of realized gains and losses as these contracts were entered into to mitigate the impact of changes in exchange rates.

While copper C1 cash cost is widely reported in the mining industry as a performance benchmark, it does not have a standardized meaning and is disclosed as a supplement to IFRS measures.

Realized Copper Price

Realized copper price is a non-IFRS ratio which is calculated as gross copper revenue divided by pounds of copper sold during the period. Management believes measuring realized copper price enables investors to better understand performance based on realized copper sales in each reporting period.

Gold C1 Cash Cost

Gold C1 cash cost is a non-IFRS performance measure used by the Company to manage and evaluate the operating performance of its gold mining segment and is calculated as C1 cash costs divided by total ounces of gold produced during the period. C1 cash cost includes total cost of production, net of by-product credits and incentive payments. Gold C1 cash cost is widely reported in the mining industry as benchmarks for performance but does not have a standardized meaning and is disclosed in supplemental to IFRS measures.

Gold AISC

Gold AISC is an extension of gold C1 cash cost discussed above and is also a key performance measure used by management to evaluate operating performance of its gold mining segment. Gold AISC is calculated as AISC divided by total ounces of gold produced during the period. AISC includes C1 cash costs, site general and administrative costs, accretion of mine closure and rehabilitation provision, sustaining capital expenditures, sustaining leases, and royalties and production taxes. Gold AISC is widely reported in the mining industry as benchmarks for performance but does not have a standardized meaning and is disclosed in supplement to IFRS measures.

Realized Gold Price

Realized gold price is a non-IFRS ratio that is calculated as gross gold revenue divided by ounces of gold sold during the period. Management believes measuring realized gold price enables investors to better understand performance based on the realized gold sales in each reporting period.

EBITDA and Adjusted EBITDA

EBITDA and adjusted EBITDA are non-IFRS performance measures used by management to evaluate its debt service capacity and performance of its operations. EBITDA represents earnings before finance expense, finance income, income taxes, depreciation and amortization. Adjusted EBITDA is EBITDA before the pre-tax effect of adjustments for non-cash and/or non-recurring items required in determination of EBITDA for covenant calculation purposes.

Adjusted net income attributable to owners of the Company and Adjusted net income per share attributable to owners of the Company

“Adjusted net income attributable to owners of the Company” is net income attributed to shareholders as reported, adjusted for certain types of transactions that, in management’s judgment, are not indicative of our normal operating activities or do not

necessarily occur on a recurring basis. "Adjusted net income per share attributable to owners of the Company" ("**Adjusted EPS**") is calculated as "adjusted net income attributable to owners of the Company" divided by weighted average number of outstanding common shares in the period.

The Company believes that, in addition to conventional measures prepared in accordance with IFRS, the Company and certain investor and analysts use these supplemental non-IFRS performance measures to evaluate the normalized performance of the Company. The presentation of Adjusted EPS is not meant to substitute the net income (loss) per share attributable to owners of the Company ("**EPS**") presented in accordance with IFRS, but rather it should be evaluated in conjunction with such IFRS measures.

Net (Cash) Debt

Net debt is a performance measure used by the Company to assess its financial position and ability to pay down its debt. Net debt is determined based on cash and cash equivalents, short-term investments, net of loans and borrowings as reported in the Company's consolidated financial statements.

Working Capital (Deficit) and Available Liquidity

Working capital is calculated as current assets less current liabilities as reported in the Company's consolidated financial statements. The Company uses working capital as a measure of the Company's short-term financial health and ability to meet its current obligations using its current assets. Available liquidity is calculated as the sum of cash and cash equivalents, short-term investments and the undrawn amount available on its revolving credit facilities. The Company uses this information to evaluate the liquid assets available.

For further details on Non-IFRS measures, please refer to the Company's annual audited consolidated financial statements for the year ended December 31, 2024 and Management's Discussion and Analysis relating thereto, a copy of which is available for review under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov.

LIST OF ABBREVIATIONS

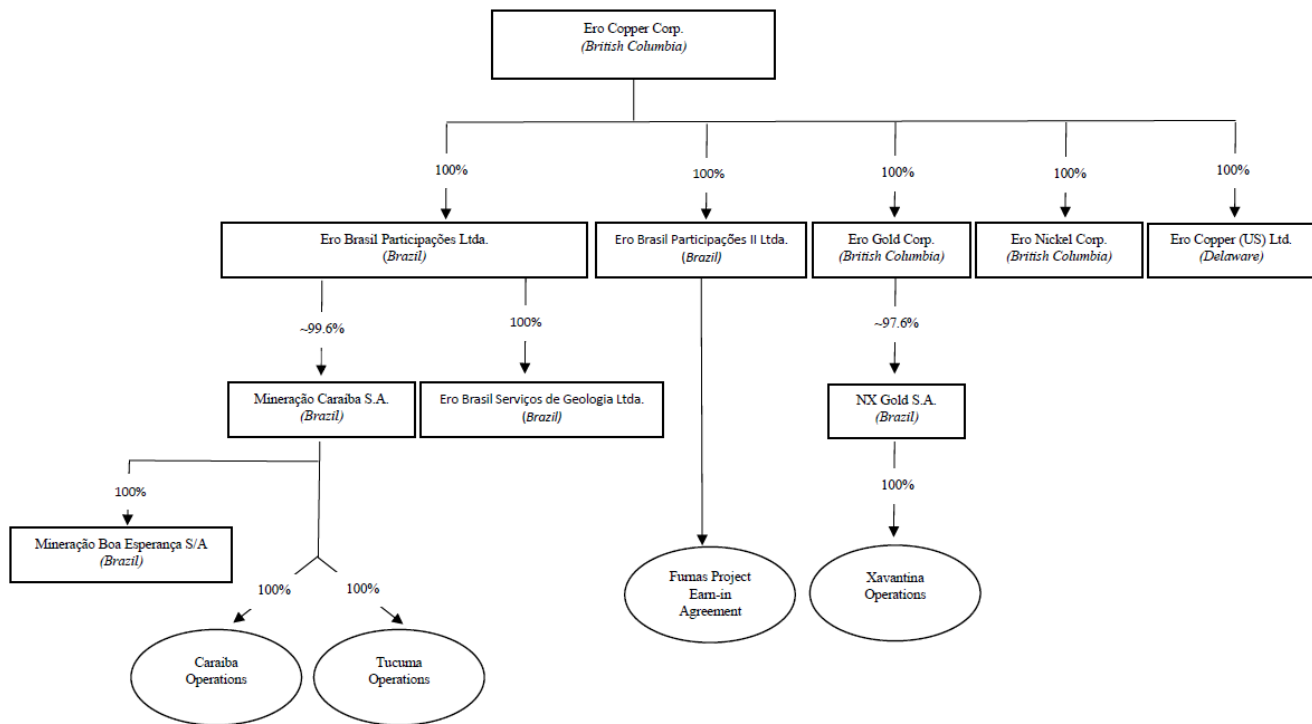

In this AIF, the following abbreviations have the meanings set forth below:

Cu	copper	Mt	megatonne
Ni	nickel	kt	kilotonne
Co	cobalt	t	metric tonne
Ag	silver	kg	kilogram
Au	gold	g	gram
Fe	iron	lb	pound
Mn	manganese	ml	millilitre
Zn	zinc	MW	megawatt
Cr	chromium	kW	kilowatt
Al	aluminium	MVA	megavolt amperes
Ca	calcium	kV	kilovolt
Mo	molybdenum	kWh	kilowatt hour
W	tungsten	Hz	hertz
Bi	bismuth	d	day
S	sulfur	h	hour
F	fluorine	s	second
Cl	chlorine	Ga	billion years
U	uranium	Ma	million years
As	arsenic	masl	metres above mean sea level
P	phosphorus	m ³	cubic metre
Pb	lead	Mm ³	cubic megametre
km	kilometre	mmWC	millimeter of water column
m	metre	Pa	pascal
cm	centimetre	mbar	atmospheric air pressure (bar)
mm	millimetre	°	degree
ft	foot	C	Celsius
ha	hectare	µm	micrometre
			Tonnes per hour
oz	troy ounce	tph	
			per hour
gpt or g/t	grams per tonne		

CORPORATE STRUCTURE

Ero Copper was incorporated under the *Business Corporations Act* (British Columbia) (“**BCABC**”) on May 16, 2016. Ero Copper’s head office is located at Suite 1050, 625 Howe Street, Vancouver, British Columbia, Canada, V6C 2T6 and its registered office is located at Suite 3500, 1133 Melville Street, Vancouver, British Columbia, Canada, V6E 4E5.

The following chart illustrates the Company’s principal subsidiaries, together with the governing law of each subsidiary and the percentage of voting securities beneficially owned or controlled or directed, directly or indirectly, by the Company, as well as the Company’s operating mines and exploration projects.

The remaining voting shares of Mineração Caraíba S.A. (“**MCSA**”) are held by a minority group of shareholders, including former employees of MCSA. The remaining voting shares of NX Gold S.A. (“**NX Gold**”) are held by a minority group of shareholders, including former employees of NX Gold.

GENERAL DEVELOPMENT AND BUSINESS OF THE COMPANY

General

Ero is a high-margin, high-growth copper producer with operations in Brazil and corporate headquarters in Vancouver, British Columbia, Canada. Ero is listed on the Toronto Stock Exchange (the “**TSX**”) and the New York Stock Exchange (“**NYSE**”), in each case under the symbol “**ERO**”.

Ero's principal asset is its approximately 99.6% ownership interest in MCSA, held indirectly through its wholly-owned subsidiary, Ero Brasil Participações Ltda. ("**EBP**"). MCSA's predominant activity is the production and sale of copper concentrate from the Caraíba Operations, with gold and silver produced and sold as by-products. The Caraíba Operations have been in operation for over 40 years and consist of a fully integrated hub-and-spoke operating model, with current mining activities conducted at the Pilar underground mine, the Vermelhos underground mine, and the Surubim open pit mine feeding the central Caraíba Mill, a conventional crushing, grinding and flotation mill located adjacent to the Pilar underground mine. For further details concerning the Caraíba Operations, see below under the headings "*Three Year History*" and "*Caraíba Operations*". In addition, MCSA holds a 100% interest in the Tucumã Operations, which is currently ramping up to commercial production, with the first saleable copper concentrate produced in July 2024. For further

details concerning the Tucumã Operations, see below under the headings “*Three Year History*” and “*Tucumã Operations*”.

Ero also owns an approximately 97.6% ownership interest in NX Gold, held indirectly through its wholly-owned subsidiary, Ero Gold Corp. (“**Ero Gold**”). NX Gold’s predominant activity is the production and sale of gold from the Xavantina Operations, with silver produced as a by-product. For further details concerning the Xavantina Operations, see below under the headings “*Three Year History*” and “*Xavantina Operations*”.

The Caraíba Operations, Xavantina Operations and the Tucumã Operations are the mineral projects material to Ero for the purposes of NI 43-101.

Ero also has the option to earn a 60% interest in the Furnas copper-gold project, located in the Carajás Mineral Province in Pará State, Brazil (the “**Furnas Project**”) approximately 50 kilometers southeast of Vale Base Metal’s (“**VBM**”) Salobo operations and approximately 190 kilometers northeast of Tucumã Operations. For further details concerning the Furnas Project, see below under the headings “*Three Year History*”.

Three Year History

Senior Unsecured Notes

- In February 2022, the Company completed an offering of US\$400 million aggregate principal amount of 6.50% senior notes due 2030 (the “**Notes**”). The Notes will mature on February 15, 2030. EBP and MCSA are currently the only guarantors of the Notes on a senior unsecured basis. The Notes are direct, senior obligations of the Company, EBP and MCSA, and are not secured by any mortgage, pledge or charge. The Company used a portion of the net proceeds of the offering to repay outstanding borrowings under the predecessor credit facility to the 2023 Senior Credit Facility of approximately US\$50 million and used the remaining balance for capital expenditures at the Tucumã Project and general corporate purposes. Additional information on the Notes is set out below under the heading “*Description of Capital Structure*”.

Senior Credit Facility

- On January 12, 2023, the Company replaced a US\$75 million senior secured revolving credit facility agreement with a second amended and restated credit agreement (the “**2023 Senior Credit Facility Agreement**”) among the Company, as borrower, Bank of Montreal, as administrative agent, joint lead arranger and sole bookrunner, The Bank of Nova Scotia (“**Scotiabank**”) as joint lead arranger, Canadian Imperial Bank of Commerce as documentation agent, and the lenders party thereto from time to time, as lenders, pursuant to which, amongst other things, (i) the revolving credit facility was increased to US\$150 million (the “**2023 Senior Credit Facility**”) payable in a lump sum at maturity in December 2026. The 2023 Senior Credit Facility Agreement was subsequently amended on November 2, 2023 to, among other things, permit the Company and its subsidiaries to enter into a copper prepayment facility and (ii) December 13, 2024 to, among other things, increase the limit from US\$150 million to US\$200 million and to extend the maturity from December 2026 to December 2028, with all conditions to drawing of funds being satisfied in January 2025. The interest rate and commitment fee on the 2023 Senior Credit Facility were reduced to sliding scales of SOFR plus 2.00% to 4.25%, and 0.45% to 0.96%, respectively. Additionally, the total leverage ratio was replaced with a net leverage ratio for the purposes of determining financial covenants and interest rates.

Non-Priced Copper Prepayment Facility

- In May 2024, the Company's subsidiary, MCSA, entered into a US\$50 million non-priced copper prepayment facility (the “**Non-Priced Copper Prepayment Facility**”), structured by the Bank of Montreal and with participation by CIBC Capital Markets, pursuant to the Copper Export Prepayment Facility Agreement dated May 6, 2024 between MCSA and the Bank of Montreal (the “**Non-Priced Copper Prepayment Facility Agreement**”) to support the commencement of production and associated working capital needs at the Tucumã Operations. This facility will be repaid over 27 equal monthly installments, beginning in October 2024, through the delivery of 272 tonnes of copper each month. Each monthly delivery's value will be determined based on prevailing market copper prices at the time of delivery. Should the value of any delivery exceed the amount of the monthly installment payment of US\$2.1 million, the excess value will be repaid to the Company. The copper to be delivered by the Company will be in the form of LME copper warrants. The Company has the option to increase the size of the non-priced copper prepayment facility from US\$50.0 million to US\$75.0 million until March 31, 2025.

Equity Financing

- On November 14, 2023, the Company completed an offering, on a bought deal basis, of 9,010,000 common shares, including, 500,000 common shares issued pursuant to the partial exercise of the underwriter's over-allotment option, at a price of US\$12.35 per common share for gross proceeds of approximately US\$111 million or net proceeds of US\$104 million after share issuance costs (the "**Offering**"). The Offering was conducted by a syndicate of underwriters led by BMO Capital Markets, as sole bookrunner and lead underwriter, and including Canaccord Genuity Corp., CIBC World Markets Inc., Scotia Capital Inc., TD Securities Inc., Cormark Securities Inc., National Bank Financial Inc., Paradigm Capital Inc., PI Financial Corp., Raymond James Ltd. and Stifel Canada. The net proceeds of

the Offering have been used to advance growth initiatives at the Tucumã Project and Caraíba Operations, advance regional exploration in Brazil, and for working capital and other general corporate purposes.

Caraíba Operations

- On January 11, 2022, the Company announced that within the Caraíba Operations, it plans to create a two-mine system at the Pilar Mine (known as Pilar 3.0) whereby the upper levels of the mine, currently in operation, will be serviced by the existing shaft, while the Deepening Extension Zone will utilize a new, larger external shaft, expected to result in significant growth in total ore production from the mine, ramping from current levels of approximately 1.3 million tonnes per annum to approximately 3.0 million tonnes. Construction of the new external shaft began in the third quarter of 2021.
- On September 29, 2022, the Company announced the discovery of a regional nickel sulphide system within the Curaçá Valley over an initial strike length of five kilometers, known as the “Umburana System”, located approximately 20 kilometers from the Company’s existing Caraíba processing facilities. The system remains open in all directions and is highlighted by multiple surface expressions of nickel mineralization. The system was discovered using new detailed field mapping and soil geochemistry collected during the Company’s 2021 and 2022 exploration programs in conjunction with the Company’s airborne electromagnetic survey.
- On November 7, 2022, the Company announced the addition of Project Honeypot into the Caraíba Operations’ 2022 Strategic Life of Mine (“**LOM**”) Plan, which, along with contributions from elsewhere within the operations, resulted in an increase of approximately 31% in the Caraíba Operations’ Proven and Probable Mineral Reserves. The inclusion of Project Honeypot into the Caraíba Operations’ 2022 Strategic LOM Plan provides operational flexibility and improvements over prior production guidance, demonstrating steady growth in copper production from approximately 45.3kt (2023) to approximately 59.4kt of contained copper by 2036 and a mine life of approximately 20 years.
- On June 8, 2023, the Company announced an update on its ongoing regional nickel sulphide exploration program within the Curaçá Valley, with drilling focused on delineating the Umburana System, which has a current strike length of approximately five kilometers. Mineralization, which outcrops at surface, remains open to depth, to the north and between the VB and Lazaro zones.
- The Caraíba mill expansion, which increased mill throughput capacity from 3.2 to 4.2 million tonnes per annum, was completed in December 2023 with design capacity achieved by year-end.
- In 2024, the Company made important progress on our growth strategy at the Caraíba Operations by advancing construction of the Pilar Mine’s new external shaft, with completion expected in 2027. Ero has also been focused on improving operational flexibility in the mine through increased underground development. While progress in 2024 was slower than expected on this front, the Company mobilized a second contractor in January 2025 and anticipates restoring meaningful flexibility within the mine by mid-year.

Xavantina Operations

- On January 11, 2022, the Company announced its plans to target higher sustained gold production levels of approximately 60,000 ounces per year at the Xavantina Operations, in an initiative known as “NX 60”. The initiative was supported by the January 6, 2022 announcement of a maiden Mineral Reserve for the Matinha Vein.

- On December 3, 2024, the Company announced an updated mineral resource and mineral reserve estimate for the Xavantina Operations, which includes a 19% increase in proven and probable mineral reserves as compared to the 2023 estimate, including a 24% increase at the Santo Antônio vein and a 26% increase in measured and indicated mineral resources, inclusive of mineral reserves, as compared to the 2023 estimate, including a 31% increase at the Santo Antônio vein.

Tucumã Operations

- On February 15, 2022, the Company announced that its Board of Directors (the “**Board**”) approved the construction of the Tucumã Project. The Company commenced construction in the second quarter of 2022.
- On June 12, 2024, the Company announced that the Tucumã Project was issued an Operational License by the Pará State environmental agency, Secretaria de Estado de Meio Ambiente e Sustentabilidade (“**SEMAS**”), being the last remaining permitting milestone for commercial production, and that physical construction of the project had reached approximately 99% completion.
- On July 23, 2024, the Company announced the production of its first saleable copper concentrate from the Tucumã Operations. Despite encountering challenges that extended Tucumã’s ramp-up timeline, the processing plant reached design recovery rates and concentrate grades during the fourth quarter. The Company is focused on steadily increasing plant throughput and achieving commercial production during the first half of 2025, with Tucumã expected to contribute significantly to Ero’s full year consolidated copper production guidance of 75,000 to 85,000 tonnes.

Furnas Project

- On October 30, 2023, Ero announced it entered into a binding term sheet with Salobo Metais S.A., a subsidiary of VBM, to earn a 60% interest in the Furnas Project.
- In July 2024, Ero’s wholly-owned subsidiary, Ero Brasil Participações II Ltda. (“**EBP II**”), entered into a definitive earn-in agreement with Salobo Metais S.A (the “**Furnas Project Earn-in Agreement**”), wherein the Company has the right to earn a 60% interest in the Furnas Project upon completion of several exploration, engineering and development milestones over a five-year period. In exchange for its 60% interest, Ero Copper will solely fund a phased work program during the earn-in period and grant VBM up to an 11.0% “free carry” on future Furnas Project construction capital expenditures.
- On October 2, 2024, the Company announced an initial mineral resource estimate for the Furnas Project, supported by over 90,000 meters of historical drilling and highlighting the project’s significant potential.

Corporate

- On August 1, 2022, the Company announced the appointment of Jill Angevine to the Board effective August 1, 2022.
- On January 11, 2023, the Company announced the first phase of its leadership succession plan with the retirement of Christopher Noel Dunn from his executive position of Executive Chairman of the Company. Mr. Dunn remained a director and the non-executive Chairman of the Board until his retirement on December 31, 2024, as more particularly discussed below.
- On November 1, 2023, the Company announced the appointment of Faheem Tejani to the Board effective November 1, 2023 and Matthew Wubs’ intention not to stand for re-election at the 2024 annual meeting of shareholders. Mr. Wubs retired from the Board immediately prior to the commencement of the annual meeting of shareholders on April 24, 2024.

- As part of the next phase of the Company's leadership succession plan:
 - Christopher Noel Dunn, who co-founded the Company, retired from the Board on December 31, 2024;
 - David Strang, who co-founded the Company and served as the Chief Executive Officer of the Company since 2016, assumed the role of Executive Chairman of the Board;

- Makko DeFilippo assumed the role of President and Chief Executive Officer of the Company and joined the Board. Prior thereto, Makko DeFilippo served as President and Chief Operating Officer of the Company since May 2023; and
- Gelson Batista, who joined the Company in September 2024, assumed the role of Chief Operating Officer of the Company.

2025 Production Guidance and Three-Year Production Outlook

The Company's 2025 production guidance and three-year production outlook demonstrates the continued execution of its organic growth strategy. Key drivers include the expected achievement of design mill throughput rates at the Tucumã Operations in 2025 and the ongoing construction of the new external shaft at the Caraíba Operations' Pilar Mine (being the Deepening Extension Project), which is expected to become operational in 2027. As a result, copper production in 2025 is expected to increase by approximately 85% to 110% year-on-year to a range of 75,000 to 85,000 tonnes and reach 85,000 to 95,000 tonnes in concentrate in each of 2026 and 2027.

At the Xavantina Operations, annual gold production is expected to remain steady at 50,000 to 60,000 ounces through 2027, with higher mine production and mill throughput levels offsetting a return to long-term block model gold grades.

Three-year Outlook	2025	2026	2027
Copper (tonnes)			
Caraíba Operations	37,500 – 42,500	40,000 – 45,000	45,000 – 50,000
Tucumã Operations	37,500 – 42,500	45,000 – 50,000	40,000 – 45,000
Total Copper	75,000 – 85,000	85,000 – 95,000	85,000 – 95,000
Gold (ounces)			
Xavantina Operations	50,000 – 60,000	50,000 – 60,000	50,000 – 60,000

Note: Guidance is based on estimates and assumptions including, but not limited to, Mineral Reserve estimates, grade and continuity of interpreted geological formations and metallurgical recovery performance. Please refer to the Risk Factors section of this AIF for a discussion of the various risk factors that could adversely impact the Company's business, production levels, financial condition, results of operations, cash flows and prospects.

2025 capital expenditures are expected to decrease meaningfully year-on-year to a range of \$230 to \$270 million, primarily due to significantly lower capital expenditures at the Tucumã Operations following the completion of construction in 2024. Capital expenditures at the Caraíba Operations are expected to remain elevated in 2025 with approximately \$80 to \$90 million earmarked for growth capital related to the advancement of the new external shaft and related infrastructure and development.

Figures presented below are in USD millions.

	2025 Guidance
Caraíba Operations	\$165 - \$180
Tucumã Operations ⁽¹⁾	\$30 - \$40
Xavantina Operations	\$25 - \$35
Furnas Copper-Gold Project and Other Exploration	\$10 - \$15
Total	\$230 - \$270

⁽¹⁾ Excludes capitalized ramp-up costs prior to the declaration of commercial production.

Business of the Company

Principal Products and Operations

The Company's principal product is copper produced and sold from the Caraíba Operations and the Tucumã Operations, with gold and silver produced and sold as by-products. Gold and, as a by-product, silver is also produced and sold from the Xavantina Operations. During the year ended December 31, 2024, the Caraíba Operations processed 3,431,294 tonnes of material, producing 35,444 tonnes of copper; the Tucumã Operations, where production continues to ramp-up, processed 333,791 tonnes of material, producing 5,156 tonnes of copper; and, the Xavantina Operations processed 146,161 tonnes of material, producing 57,210 ounces of gold. The following tables summarize the Company's production for the financial years ended December 31, 2024 and 2023 from the Caraíba Operations, the Tucumã Operations and the Xavantina Operations:

The Caraíba Operations

	2024	2023
Ore mined (tonnes)	3,274,410	3,341,121
Ore processed (tonnes)	3,431,294	3,231,667
Grade (% Cu)	1.14	1.49
Recovery (%)	90.6	91.4
Cu Production (tonnes)	35,444	43,857
Cu Production (lbs)	78,139,888	96,687,638
Concentrate grade (% Cu)	33.0	33.7
Concentrate sales (tonnes)	110,650	131,002
Cu Sold in concentrate (tonnes)	36,557	42,595
Cu Sold in concentrate (lbs)	80,593,665	93,905,643

The Tucumã Operation

	2024
Ore mined (tonnes)	1,932,423
Ore processed (tonnes)	333,791
Grade (% Cu)	1.78
Recovery (%)	86.6
Cu Production (tonnes)	5,156
Cu Production (lbs)	11,365,980
Concentrate grade (% Cu)	28.0
Concentrate sales (tonnes)	15,036
Cu Sold in concentrate (tonnes)	4,107
Cu Sold in concentrate (lbs)	9,055,352

The Xavantina Operations

	2024	2023
Ore mined (tonnes)	146,160	135,982
Ore processed (tonnes)	146,161	136,002
Head grade (grams per tonne Au)	13.37	15.13
Recovery (%)	92.0	89.5
Gold ounces produced (oz)	57,210	59,222
Silver ounces produced (oz)	33,927	37,674
Gold sold (oz)	60,195	57,949
Silver sold (oz)	34,503	35,655

During the year ended December 31, 2024, the Company generated net operating revenue of US\$470.3 million. The following table summarizes the net revenue of the Company for the financial years ended December 31, 2024 and 2023. Tabular amounts are in thousands of US dollars:

	Year Ended December 31, 2024 (US\$000s)	Year Ended December 31, 2023 (US\$000s)
Copper concentrate	342,956	320,603
Gold	127,303	106,877
Net Operating Revenues:	470,259	427,480

There are global copper and gold markets into which the Company can sell its copper concentrate and gold and, as a result, the Company is not dependent on a particular purchaser with regard to the sale of the copper concentrate and gold that it produces.

MCSA sells its final copper concentrate, containing gold and silver as by-product metals, to various international trading companies that ship the copper concentrate purchased from MCSA to smelters globally via the Barra dos Coqueiros port located in Barra dos Coqueiros, Sergipe State, Brazil. All copper concentrate is transported from site to the port by road using standard highway trucks, which are weighed and sampled for final assay prior to shipment.

NX Gold produces and sells doré bars containing gold and silver to COIMPA Industrial Ltda. (“**COIMPA**”). The doré bars are transported to COIMPA’s facility in Manaus, State of Amazonas, Brazil by airplane using a secure gravel airstrip located on the Xavantina Operations.

Competitive Conditions

The Company’s primary business is to produce and sell copper. The Company also produces and sells gold. Prices are determined by world markets over which the Company has no influence or control. Ero’s competitive position is primarily

determined by its costs compared to other producers throughout the world and its ability to maintain its financial integrity through metal price cycles. Costs are governed to a large extent by the grade, nature and location of the Company's Mineral Reserves and Mineral Resources as well as by input costs and the level of operating and management skill employed in the production process.

The mining industry is competitive, particularly in the acquisition of additional Mineral Reserves and Mineral Resources in all phases of operation, and the Company competes with many companies possessing similar or greater financial and technical resources. The Company also competes with other mining companies and other third parties over sourcing raw materials, equipment and supplies in connection with its production, development and exploration operations, as well as for skilled and experienced personnel and transportation capacity.

Specialized Skills and Knowledge

The nature of the Company's business requires specialized skills, knowledge and technical expertise in the areas of geology, engineering, mine planning, mine operations, metallurgical processing, and environmental compliance. In addition to the specialized skills listed above, the Company also relies on staff members, contractors and consultants with specialized knowledge of logistics and operations in Brazil and local community relations. In order to attract and retain personnel with the specialized skills and knowledge required for the Company's operations, the Company maintains competitive remuneration and compensation packages. To date, the Company has been able to meet its staffing requirements.

Business Cycles

The mining business is subject to global economic cycles which affect the marketability of products derived from mining.

Employees

As at December 31, 2024, Ero and its subsidiaries employed a total of 3,690 employees (consisting of 26 employees of Ero, four employees of Ero Copper (US) Ltd., 77 employees of EBP, 26 employees of EBP II, 15 employees of Ero Brasil Serviços Geologia Ltda., 2,681 employees of MCSA, 316 employees of Mineração Boa Esperança S/A and 545 employees of NX Gold) and 3,790 contractors (consisting of 15 contractors of Ero, three contractors of Ero Nickel Corp., 54 contractors of EBP II, one contractor of Ero Brasil Serviços Geologia Ltda., 2,418 contractors of MCSA, 965 contractors of Mineração Boa Esperança S/A, and 334 contractors of NX Gold).

Foreign Operations

Ero's material properties are the Caraíba Operations, the Xavantina Operations and the Tucumã Operations, each located in Brazil. Foreign operations accounted for 100% of the Company's revenue and represented approximately 96% of its assets as at December 31, 2024. Accordingly, the Company is entirely dependent on its foreign operations for the exploration and development of its properties and for the production of copper and gold. Any changes in regulations or shifts in political attitudes in any of these jurisdictions, or other jurisdictions in which Ero has projects from time to time, are beyond the control of the Company and may adversely affect its business. Future development and operations may be affected in varying degrees by such factors as government regulations (or changes thereto) with respect to the restrictions on production, export controls, income taxes, expropriation of property, repatriation of profits, environmental legislation, land use, water use, land claims of local people, mine safety, work force health and safety in the face of prevailing epidemics, pandemics or other health risks, and receipt of necessary permits. The effect of these factors cannot be accurately predicted. See below under the heading "*Risks Factors*".

The risks of the corporate structure of the Company and its subsidiaries are risks that are typical and inherent for companies that have material assets and property interests held indirectly through foreign subsidiaries and located in foreign jurisdictions. The Company's business and operations in Brazil are exposed to various levels of political, economic and other risks and uncertainties associated with operating in a foreign jurisdiction such as a difference in laws, business cultures and practices, banking systems and internal control over financial reporting. See below under the heading "*Risk Factors*".

The Company has implemented a system of corporate governance, internal controls over financial reporting and disclosure controls and procedures that apply at all levels of the Company and its subsidiaries. These systems are overseen by the Board and implemented by the Company's senior management. The relevant features of these systems are set out below.

Control over and Communication with Foreign Subsidiaries

The Company controls its foreign subsidiaries by virtue of corporate oversight and by its ownership interest in such entities (see above under the heading “*Corporate Structure*”). The Company’s management has the (i) power to appoint and dismiss, at any time, any and all of the foreign subsidiaries’ officers and directors, (ii) power to instruct the foreign subsidiaries’ officers to pursue business activities in accordance with the

Company's wishes, and (iii) legal right, as a shareholder, to require the officers of each such foreign subsidiary to comply with their fiduciary obligations. As a result, management of the Company can effectively align its business objectives with those of the foreign subsidiaries and implement such objectives at the subsidiary level.

The Company maintains open communication with each of its operations in Brazil through several senior officers who are proficient (or fluent) in Brazilian Portuguese. In addition, all management team members in Brazil are fluent in Brazilian Portuguese and fluent (or proficient) in English. The primary language used in management and Board meetings is English and material documents relating to the Company and its operations that are provided to the Board and its committees are in English. If necessary, management of the Company and the Board and its committees have access to independent translators to overcome any language differences. The Company does not currently have a formal communication plan or policy in place and has not, to date, experienced any communication-related issues.

Board and Management Expertise

Each of the Company's non-executive directors and senior officers have experience in Brazil, being the jurisdiction in which the Company operates. In addition, the Board, through its corporate governance practices, receives quarterly management and technical updates and progress reports in connection with the foreign subsidiaries, and at each quarterly Board meeting, the directors meet with management on topics including short, medium and long-term corporate objectives, strategic risk and mitigation strategies and strategic planning, and in so doing, maintains effective oversight of the Company's business and operations. Moreover, Board members and senior officers have access to corporate director education programs which offer courses on topics such as strategic direction and risks, financial essentials, audit committee effectiveness, risks and disclosure, human resource and compensation committee performance and enterprise risk oversight.

In 2024, most senior officers visited the Company's operations in Brazil quarterly, or more frequently if circumstances required, on a rotating basis, to ensure effective control and management of the Company's foreign operations. Each of the Company's non-executive directors, visited the Caraíba Operations and Tucumã Operations in 2024. Chantal Gosselin, Steve Busby and John Wright also visited the Xavantina Operations in 2024. During these visits and/or past visits, they have met with local employees and community members, with such interactions enhancing the visiting directors' and officers' knowledge of local culture and key stakeholders.

Further, to ensure effective control and management of the Company's foreign operations, all directors are provided with quarterly reports regarding the Company's business and operations, and virtual or in-person meetings are held amongst the Board and management quarterly, or more frequently if circumstances required, and virtual meetings are held amongst management and the operations team in Brazil weekly, or more frequently if circumstances required.

Internal Control Over Financial Reporting and Funds

The Company maintains internal control over financial reporting with respect to its operations in Brazil by taking various measures. Several of the Company's senior officers have the relevant language proficiency (Brazilian Portuguese) and each senior officer has local cultural understanding and relevant work experience in Brazil which facilitates better understanding and oversight of the Company's operations in the context of internal controls over financial reporting.

Pursuant to the requirements of National Instrument 52-109, *Certification of Disclosure in Issuers' Annual and Interim Filings*, the Company assesses the design and effectiveness of its internal controls over financial reporting on an annual basis.

Furthermore, key controls for the accounts in scope are tested across the Company on an annual basis and the working papers of these tests performed at all the locations are reviewed at the head office level.

Differences in banking systems and controls between Canada and Brazil are addressed by having internal controls over cash; especially over access to cash, cash disbursements, appropriate authorization levels, performing and reviewing bank reconciliations and the segregation of duties.

The Company ensures the flow of funds between Canada and Brazil functions as intended by:

- appointing common officers of the Company and Ero Brasil/MCSA/NX Gold;
- involving the Company's Chief Financial Officer, located in Vancouver, in hiring key finance personnel in Brazil; and
- monitoring the finance departments in Brazil by regular personal visits by the Chief Financial Officer, the Vice President, Finance and other key executives to Brazil.

Records

All of the minute books and corporate records and documents of the foreign subsidiaries are filed at the relevant entity's headquarters, and with the relevant governmental or regulatory body in Brazil. The custodians of such documents report directly to the Company's head office and senior management team to ensure continued oversight.

Environmental Protection

The Company's exploration, development and mining activities are subject to various levels of federal, state and local laws and regulations relating to the protection of the environment, including requirements for closure and reclamation of mining properties. Specific statutory and regulatory requirements and standards must be met throughout the exploration, development and mining stage of a property regarding air quality, water quality, fisheries, wildlife and forestry management and protection, tailing facility management, solid and hazardous waste management and disposal, noise, land use and reclamation. Details and qualification of the Company's mine closure and restoration obligations are set out in Note 13 of the Company's audited consolidated financial statements for the year ended December 31, 2024, a copy of which is available for review under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov.

The financial and operating effect of environmental protection requirements on the capital expenditures and earnings of each mineral property are not significantly different than those of similar sized mines and therefore do not and will not impact the Company's competitive position in the current or future financial years.

Social and Environmental Policies

The Company places great emphasis on providing a safe and secure working environment for all its employees, suppliers, contractors and consultants, and recognizes the importance of operating in a sustainable manner. The Board has adopted a Code of Business Conduct and Ethics of the Company, which sets out the standards which guide the conduct of the Company's business and the behavior of its directors, officers, employees and consultants. All new employees must read, and acknowledge that they will abide by, the code when hired. The code, among other things, sets out standards in areas relating to the Company's commitment to health and safety in its business operations and the identification, elimination or control of workplace hazards; promotion and provision of a work environment in which individuals are treated with respect, provided with equal opportunity and is free of all forms of discrimination and abusive and harassing conduct; and ethical business conduct and legal compliance. The Board has also adopted a Supplier Code of Conduct, which sets out the core values that each supplier of the Company is expected to respect and abide by at all times, including among other things: (i) adhering to all applicable laws and regulations of the countries and regions where they conduct business, including laws protective of human rights, worker health and safety, and the environment; (ii) conducting their business ethically and not engaging, directly or indirectly, in unethical or illegal practices; (iii) adhering to the Company's Anti-Corruption Policy (discussed below), and with all applicable anti-corruption laws, including the *Corruption of Foreign Public Officials Act* (Canada); (iv) adhering to the Company's Global Human Rights Policy and Corporate Social Responsibility Policy (discussed

below) in all of their dealings with workers, community members and others affected by their activities while providing services to the Company, including not engaging in any form of modern slavery such as the use of forced, compulsory or child labour; and, (v) adhering to the Company's Environmental Policy (discussed below), Health and Safety Policy (discussed below) and all other site-specific environmental, health and safety practices and procedures that apply to their activities.

In addition, the Board has adopted a Global Human Rights Policy, as the Company is committed to fostering a positive human rights culture within the organization and striving to prevent or mitigate any adverse impact of the Company's activities on its employees, communities and external stakeholders. The policy applies to each director, officer, employee, and third party, such as contractor, consultant, supplier, vendor, security provider and business partner of Ero Copper and its subsidiaries. The policy, among other things, outlines the following commitments of Ero Copper: (i) adhering to all applicable human rights laws and regulations of the countries and regions where the Company conducts its business; (ii) providing a safe and healthy workplace that is free from violence, harassment, intimidation, and discrimination on the basis of race, colour, creed, age, gender (including gender identity and expression), language, national or social origin, family or marital status, sexual orientation, disability, religious, political or other opinion, union affiliation or other basis prohibited by law; (iii) respecting workers' rights, including freedom of peaceful assembly and association, and engagement in collective bargaining consistent with the relevant conventions on that subject; (iv) seeking to avoid or minimize causing or contributing to adverse human rights impacts through its activities, addressing such impacts if they occur, and engaging in processes to mitigate those impacts; (v) maintaining operational-level grievance mechanisms to report and address any actual or potential adverse impacts or risks on human rights; (vi) engaging in meaningful dialogue, promoting participation and fostering inclusion with potentially affected groups and other stakeholders, including women, children and minority groups; (vii) obtaining land access rights and conducting land acquisitions in an appropriate and timely manner to ensure that physical and economic displacement impacts on affected people, if any, are avoided or minimized where possible, and appropriately mitigated when they occur in a manner that fosters trust and mutual respect; (viii) acting with transparency and avoiding knowingly being complicit in activities that cause, or are likely to cause, adverse impacts or risks to human rights; (ix) not engaging in any form of modern slavery such as the use of forced, compulsory or child labour; and (x) respecting and not interfering with anyone who acts to promote or protect human rights through peaceful and lawful means.

The Board has also adopted a Whistleblowing Policy for individuals to report complaints and concerns regarding, among other things, accounting, financial reporting, internal controls, fraud or auditing matters. As well, the Company has an Anti-Corruption Policy which requires that directors, officers, employees and consultants of the Company conduct business in a manner that does not contravene local and international anti-bribery and anti-corruption laws that apply to the Company, including the *Criminal Code* (Canada) and *Corruption of Foreign Public Officials Act* (Canada). The Lead Director and the Audit Committee of the Company, or a designated member thereof, are responsible for monitoring compliance with these policies and investigating any reported violations, although employees may approach the Company's external legal counsel if preferred for concerns under the Anti-Corruption Policy.

The Board has also established an Environmental, Health, Safety and Sustainability Committee to assist it in fulfilling its oversight responsibilities in respect of development, implementation and monitoring of the Company's health, safety, environment and sustainability policies. In particular, the Environmental, Health, Safety and Sustainability Committee is responsible for, among other things: (i) providing oversight with respect to management's periodic review, evaluation and development, where necessary, of policies, practices and standards of performance that meet or exceed legal and regulatory requirements and industry standards in the areas of health, safety, sustainability and environmental stewardship; (ii) periodically reviewing, with management, the risks and opportunities associated with health and safety; environmental matters including water, waste, biodiversity and air quality management as well as emissions and climate change; corporate social responsibility matters including engagement with host communities; and related matters, and review management's recommendations regarding the adoption of appropriate programs and procedures to address such risk and opportunities or, if required, make such recommendations; (iii) reviewing at least annually with management the Company's corporate health, safety, environmental and sustainability policies, tailings facility management, and emergency response plans and recovery programs; (iv) periodically reviewing and monitoring with management the Company's strategies and performance with

respect to health, safety, sustainability and the environment; (v) periodically reviewing and monitoring with management the Company's policies and, if necessary, procedures and practices relating to the reporting of health, safety and environmental incidents with respect to the Company's facilities, properties and operations, in compliance with regulatory laws; (vi) reviewing with management and legal counsel, the Company's current or pending legal actions by or against the Company, related to environmental, health, safety and sustainability issues; (vii) receiving and reviewing reports regarding significant health, safety and environmental incidents, emerging issues, summaries of inspections or audits, and corrective actions taken in response to deficiencies; (viii) monitoring as well as reviewing reports prepared by the Company with respect to health, safety, sustainability

and the environment, including emerging potential physical and market-related risks to the Company's business associated with climate change, and review the Company's public communications and disclosure documents with respect to such matters, including the Company's annual sustainability report; (ix) periodically reviewing steps taken by management to ensure that employees receive the training necessary to meet health, safety, sustainability and environmental standards set by law and policies set by the Company; (xi) facilitating information sharing with other committees of the Board, as required, to address matters of mutual interest or concern regarding health, safety, environmental and sustainability issues; (xii) reporting regularly to the Board on its activities; and (xiii) periodically reviewing its mandate and recommend to the Board for its approval any modifications to the mandate. The Environmental, Health, Safety and Sustainability Committee also assists the Board in its oversight of the Company's Corporate Social Responsibility Policy, Health and Safety Policy and Environmental Policy, which apply to each director, officer, employee and any third party, such as a contractor, consultant and supplier, representing or providing services for or on behalf of Ero Copper or any of its subsidiaries.

The Corporate Social Responsibility Policy outlines the Company's commitment to fostering sustainable development by operating all of its mines and developing new projects in a manner that is respectful of local communities. The policy, among other things, outlines the following commitments of Ero Copper: (i) identifying and engaging its communities of interest in timely, inclusive, ethical, transparent and culturally respectful dialogue prior to undertaking significant activities and throughout the life of an operation or project; (ii) continuing to maintain formal grievance mechanisms as part of its overall community engagement process; (iii) monitoring, continuously improving, and reporting on the performance and effectiveness of its activities related to corporate social responsibility; (iv) implementing meaningful and effective strategies for community engagement; (v) promoting a safe environment for local communities; (vi) respecting the social, economic and cultural rights of local people; (vii) assisting local and regional development in areas where its operations and projects are located through training and employment; and (viii) adhering to all applicable laws and regulations of the countries and regions where Ero Copper conducts its business.

The Health and Safety Policy outlines the Company's commitment to protecting the health and safety of its employees and third parties, such as contractors, consultants, and suppliers, at its mining operations and development projects. The policy, among other things, outlines the following commitments of Ero Copper: (i) promoting health and safety on and off the job; (ii) providing employees with the training and tools to work safely and expecting third parties, such as contractors, consultants and suppliers, to do the same; (iii) educating its employees to the potential hazards of their job and expecting third parties, such as contractors, consultants and suppliers, to do the same; (iv) requiring that employees perform their duties in the safest manner possible and expecting third parties, such as contractors, consultants and suppliers, to do the same; (v) adhering to all applicable health and safety laws and regulations of the countries and regions where Ero Copper conducts its business; (vi) striving for continuous improvement in all aspects of health and safety; (vii) providing a safe work environment by minimizing or, where possible, eliminating hazards, adhering to proven health and safety practices, implementing accident prevention programs, and ensuring that first aid and emergency response plans are in place at each operation; (viii) ensuring accident reporting is completed in a diligent manner and where necessary taking immediate steps to mitigate the potential for reoccurrence; (ix) developing and operating health and safety management programs at its operations that meet or exceed those in use by its peer companies; (x) promoting employee participation in the development of health and safety standards and management programs such that its employees take ownership of their health and safety responsibilities; (xi) conducting regular reviews of health and safety management programs and report findings to management and the Board; and (xii) conducting annual audits of all health and safety management programs and remediating all identified health and safety findings promptly.

The Environmental Policy outlines the Company's commitment to wise environmental stewardship, including operating its mines and developing new projects in an environmentally sustainable and responsible manner. The policy, among other

things, outlines the following commitments of Ero Copper: (i) adhering to all applicable environmental laws, regulations and other environmental obligations in the countries and regions in which it operates, and to follow additional environmental standards and practices that are voluntarily adopted by the Company; (ii) protecting the environment by applying proven management practices to minimize releases of greenhouse gas emissions and other pollutants to the air, land or water, facilitate the appropriate treatment and disposal of waste, and mitigate environmental impacts; (iii) mitigating impacts to biodiversity through research, partnerships and land management processes; (iv) promoting the efficient use of energy, water and other natural resources through recovery, recycling and reuse; (v) striving to ensure the safe and

responsible management and storage of tailings in accordance with applicable laws and regulations during the life of each operation and after the closure thereof; (vi) performing progressive reclamation activities during the life of each operation, and regularly updating closure plans to take into consideration the interests of host communities; (vii) communicating this commitment to excellence in environmental performance and climate protection with its subsidiaries, employees, suppliers, contractors, and other agents and the communities in which Ero Copper operates; (vii) allocating the necessary resources to meet its reclamation and environmental obligations; (viii) educating employees regarding environmental matters, including climate change, water conservation and energy efficiency and awareness, and promoting employee participation in minimizing environmental impacts; (ix) striving to ensure all environmental incidents are reported, investigated and remediated; (x) seeking opportunities to improve its environmental performance through adherence to these principles; (xi) regularly reviewing its environmental management system to ensure that it remains appropriate and that Ero Copper's environmental objectives and targets are being addressed; and (xii) communicating openly and transparently with internal and external interested parties to develop a mutual understanding of environmental issues, needs and expectations, including regularly reporting Ero Copper's water use, energy use and greenhouse gas emissions as well as climate-related risks and opportunities to its stakeholder.

A copy of the above-mentioned codes, policies and mandates as well as the Company's 2023 Modern Slavery Act Report can be found on the Company's website at www.ero-copper.com.

Climate Accountability / Sustainability

Ero Copper, in association with the Brazilian Mining Association ("**IBRAM**"), is implementing the Towards Sustainable Mining ("**TSM**") protocols and frameworks of the Mining Association of Canada ("**MAC**"), a world-class management standard designed to enhance our community engagement processes, drive industry-leading environmental practices and reinforce Ero Copper's commitment to the safety and health of its employees and surrounding communities.

In 2021, Ero Copper became a signatory of the United Nations Global Compact ("**UN Global Compact**"). Ero Copper is committed to integrating into its business practices the 10 Principles of the UN Global Compact, covering human rights, labor, the environment and anti-corruption. Ero Copper is also committed to driving global sustainable development and contributing to the United Nations Sustainable Development Goals. The Company reports annually on its sustainability performance in alignment with the Global Reporting Initiative ("**GRI**") Standards and the Sustainability Accounting Standards Board ("**SASB**") Metals and Mining Standards and has commenced aligning its disclosure with the Taskforce on Climate-related Financial Disclosures ("**TCFD**") reporting frameworks.

The Ero Copper team recognizes that climate change is a threat to the global environment, society, stakeholders and the Company's business. The Company's 2023 Sustainability Report, published on October 31, 2024, contains disclosures prepared in reference to the GRI Universal Standards and includes disclosures in alignment with the SASB Metals and Mining Standards. The 2023 Sustainability Report also includes the Company's Scope 1 and Scope 2 greenhouse gas emissions data and an update on the Company's progress toward TCFD alignment as well as an update on the Company's commitment toward the United Nations Global Compact and action toward 17 of the United Nations Sustainable Development Goals. A copy of the 2023 Sustainability Report is available for review on the Company's website at www.ero-copper.com and under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ and on EDGAR at www.sec.gov.

The Company's business and operations in Brazil are exposed to risks and uncertainties associated with climate change, including those risks referred to under the heading "*Risk Factors*".

Information Systems and Cyber Security

The Company's business operations depend upon the availability, capacity, reliability, and security of its information technology ("IT") systems. Ero has a dedicated IT department located at the Caraíba Operations, the Xavantina Operations and the Tucumã Operations in Brazil as well as in its head office located in Vancouver, British Columbia, Canada. The IT department reports to the Vice-President, Finance, who provides

quarterly reports to the Audit Committee and Board regarding information security matters, such as the implementation of new information security technology and training initiatives as well as risks.

Ero relies on various IT systems in all areas of its operations, including financial reporting, contract management, exploration and development data analysis, mining, processing and other operational activities, human resource management, regulatory compliance and communications with employees and third parties. These IT systems could be subject to network disruptions caused by a variety of sources. As such, Ero's IT department conducts regular maintenance, updates and replacement of networks, equipment, IT systems and software, as well as pre-emptive work and redundancies to mitigate the risks or magnitude of failures, if any. In addition, Ero's IT systems and software are protected by various tools including, but not limited to, anti-virus systems, firewalls, password requirements including the use of multi-factor authentication for system accesses, data encryption, e-mail filtering solutions, and cyber security systems to monitor, detect and respond to threats. In addition, Ero's IT department also performs periodic audits, vulnerability assessments and penetration tests.

The senior management team and those employees with access to sensitive information and data undertake regular information security training, which includes the use of an online platform that provides formal cyber security awareness training and deploys periodic simulated phishing email campaigns to evaluate and assess user knowledge of various prevailing security threats.

Since its incorporation in 2016, the Company has not experienced any known significant cyber-attacks or other information security breaches.

CARAÍBA OPERATIONS

The scientific and technical information in this section relating to the Caraíba Operations, other than the scientific and technical information under the heading "*Caraíba Operations – Updated Information with respect to the Caraíba Operations*", is a direct extract of the Executive Summary section contained in the Caraíba Operations Technical Report dated December 22, 2022 with an effective date of September 30, 2022, which has been conformed to be consistent with the formatting and other defined terms within this AIF. The entire Caraíba Operations Technical Report, a copy of which is available for review under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov, is incorporated by reference into this AIF and should be consulted for details beyond those incorporated herein.

The scientific and technical information set out in this AIF under the heading "*Caraíba Operations – Updated Information with respect to the Caraíba Operations*", has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a "qualified person" within the meanings of NI 43-101.

Executive Summary

Ero Copper is a Vancouver-based publicly listed copper mining company that trades on the Toronto and New York Stock Exchanges under the ticker "ERO" and exists under the British Columbia *Business Corporations Act*. Ero Copper's principal asset is a 99.6% interest in MCSA (or in this section of the AIF referred to as "Ero Brasil"), a Brazilian mining company operating in the Curaçá Valley, northeastern Bahia State, Brazil. The regional Ero Brasil operations in Bahia include fully integrated processing operations and, currently, three active producing mining locations within the Curaçá Valley. The active operations include the Caraíba Complex (comprised of the underground Pilar Mine ("Pilar UG Mine"), the underground Vermelhos Mine ("Vermelhos UG Mine"), the Surubim Mine and the integrated Caraíba Mill (which includes an inactive

solvent extraction electrowinning plant (“SX/EW Plant”). The past producing operations include the open pit mines of R22 (“R22 Mine”) as well as the historic mines of Angicos (“Angicos Mine”) and Suçuarana (“Suçuarana Mine”). Collectively the active and past-producing mines comprise the “Caraíba Operations”. Additionally, future operations are forecast to occur later in the production plan within the northern part of the Curaçá Valley including: the adjacent Vermelhos West (N8) and Vermelhos East (N9) open pits (collectively the “N8/N9 OP Mine”), the Siriema open pit mine (“Siriema OP Mine”), collectively with the active Vermelhos UG Mine comprise the mineral reserves within the “Vermelhos District”. In the central part of the Curaçá Valley, future operations include: the expansion of the adjacent Surubim and C-12 underground mine (the “C-12 UG Mine”) and the C-12 open pit (“C-12 OP Mine”), collectively the Surubim Mine, which re-started operations during

2022, comprise the stated mineral reserves of the “Surubim District”. In the southern part of the Curaçá Valley, the past producing Suçuarana open pit (“Suçuarana OP Mine”) and the R22W open pit (“R22W OP Mine”), collectively with the active Pilar UG Mine comprise the stated mineral reserves of the “Pilar District”. The Pilar District is located approximately 385km north-northwest of Salvador and 90km southeast of Petrolina, in the State of Bahia, Brazil. The center of the Surubim District is located approximately 33km north of the Pilar UG Mine and Caraíba Mill (jointly referred to as the “Caraíba Mine”) at the Surubim Mine, while the center of the Vermelhos District and the Vermelhos UG Mine is located another 31km north-northwest of the Surubim Mine. In aggregate, mining and development activities occur over approximately 100km in strike length across the Curaçá Valley.

The Caraíba Operations have an extensive operating history in the region. Open pit and processing operations started in 1979, while underground mining operations commenced in 1986. Ero Brasil owns a 100% interest in the Caraíba Operations including the above-mentioned mines, integrated processing facilities and all supporting infrastructure. The Pilar UG Mine currently produces a nominal 4,000 to 6,000 t/d, or approximately 1.0 to 1.5 Mtpa from underground operations that, combined with the nominal 3,000 to 5,000 t/d, or approximately 1.5 Mtpa currently mined from satellite mining operations within the Caraíba Operations, including the Vermelhos UG Mine and the Surubim Mine, serves as feed for the Caraíba Mill. The Caraíba Mill is currently producing high quality, low impurity copper concentrate grading approximately 33%-35% copper. The concentrate typically contains minor amounts of precious metals. Historical average grades of precious metals in concentrate are approximately 2 g/t gold and 43 g/t silver in concentrate.

The Company's 2022 life of mine (LOM) planning process considers recently completed and ongoing investments in mining and milling infrastructure under the Company's "Pilar 3.0" initiative, which includes the integration of newly defined mineral resources and reserves in the upper levels of the Pilar UG Mine (efforts were focused on an area known as “Project Honeypot”) the ongoing construction of a new external shaft to access mineralization below level -965 in the Pilar UG Mine (known as the “Deepening Project” or from a geological perspective, the “Deepening Extension Zone”), and the ongoing expansion of the Caraíba Mill to increase processing capacity to approximately 4.2 million tonnes per annum (“Mtpa”). As a result of the integration of Project Honeypot and the nature of the mineralization remaining in the upper levels of the Pilar Mine, and more broadly within the Company's underground operations, effective extraction of the mineral reserves necessitated the consideration of inferred mineral resources in the Company's long-term strategic planning efforts, particularly in the design of stopes that include measured, indicated and some inferred mineral resources - a process that has been utilized at the Pilar UG Mine since underground operations commenced in 1986. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Mineral resources which are not mineral reserves do not have demonstrated economic viability. The Company has commenced a program to continue infill drilling of the Inferred resource to further upgrade this material; however, until this work is completed, and the Inferred resources have been upgraded to reserves, there is no certainty this material will be converted into mineral reserves.

The purpose of the report (in this section of the AIF, the “Report” or “Technical Report”) is to set out and to provide background and supporting information on the mineral resources and mineral reserves for the Caraíba Operations. The Report was prepared by GE21, BNA and NCL on behalf of Ero Copper. The Report and estimates herein have been prepared following the guidelines of NI 43-101 and Form 43-101F1 – Technical Report (“Form 43-101F1”).

The effective date of the Report is September 30, 2022 (in this section of the AIF, the “**Effective Date**”). The issue date of the Report is December 22, 2022.

1.1 Property Description and Ownership

The Caraíba Operations are located in northeastern Bahia State, Brazil, about 385 km north-northwest of the capital city of Salvador. The center of the Caraíba Operations is located at 9° 52' South, 39° 52' West. As of the Effective Date, Ero Brasil holds, has applications in process, or has negotiated agreements with third-parties for a north-trending set of 138 mineral exploration rights, six mining concessions and seven additional mining concessions are under application. The property, including mining and permits under application covers a total area of 185,865.0 ha. The exploration rights held or with applications in process cover an area of 171,045.2 ha and consist of areas up for renewal as well as negotiated with third-parties under normal course

of business. Ero Brasil holds 100% legal and beneficial ownership of exploration rights for a period varying up to three years with three-year extensions provided annual reporting requirements are performed on the property. Within the exploration rights, Ero Brasil's interests include the right to access the property, to engage in exploration, development, processing, and construction activities in support of mineral exploration and development. Where applicable, compensation is provided to the holder of surface rights for occupation or loss caused by the work.

Mining and development activities are contained within seven mining concessions covering 3,299.6 ha. In addition, Ero Brasil has seven applications for mining covering 10,521.4 ha. Within the mining concessions, Ero Brasil holds 100% legal and beneficial ownership. There are no time constraints provisioned with the mining concessions; however, operating permits and licenses are extended and renewed in normal course of business according to the nature of each permit and requirements therein.

Infrastructure maps of the Caraíba Operation and the broader Curaçá Valley are shown in Appendix D to the Report.

1.2 Geology and Mineralization

The Curaçá Valley's mafic-ultramafic complex is located within the Curaçá high-grade metamorphic gneissic terrain - part of the Salvador-Curaçá orogen, a northern extension of the Atlantic Coast Granulite Belt in the São Francisco Craton. The mining and development projects located within the Caraíba Operations lie within a Trans-Amazonian age belt bordered on the west by volcano-sedimentary rocks of the Jacobina Group and on the east by the Itiúba intrusive syenite rocks.

Known copper deposits are hosted within the Rio Curaçá and Tanque Novo sequences, differentiated by metamorphic facies. The two sequences are located across the base of the Caraíba Operations and include the mafic-ultramafic rocks as well as granite, granodiorite and syenite. Pyroxenite has been described within the mafic-ultramafic lenses at the Caraíba Mine, R22W Mine, Angicos Mine, Suçuarana Mine, Surubim Mine and the Vermelhos UG Mine.

The Cu-rich deposits are hosted by irregular-shaped intrusive bodies of pyroxenite (hypersthene) and minor gabbro-norite that have been intruded into granulite facies gneiss and migmatite at the northern margin of the São Francisco Craton. The intrusions have been interpreted as either deformed sill-like bodies or irregular shaped intrusions into an anastomosing ductile shear zone. Mineralized textures include interstitial, net-textured, stringer and sulphide-rich matrix breccias. There is additional evidence throughout the Curaçá Valley of sulphide zonation, characterized as pyrrhotite +/- pentlandite zoning to pyrrhotite +/- pentlandite plus chalcopyrite and finally to chalcopyrite plus bornite. High-grade mineralization is often closely associated with phlogopite enrichment. Additional work is underway to evaluate recent observed occurrences of nickel, including the recently discovered Ni-rich Umburana System, as well as platinum group elements which have been documented throughout the Curaçá Valley.

In late 2022, subsequent to the Effective Date, Ero Copper announced the first documented nickel sulphide discovery in the Curaçá Valley as part of its ongoing regional exploration program. The nickel system, known as the "Umburana System", is located approximately 20 kilometers from the Caraíba Mill. The system was discovered using detailed field mapping and soil geochemistry collected during the Company's 2021 and 2022 exploration programs in conjunction with the Company's airborne electromagnetic survey. The ongoing program identified large intervals of disseminated and interstitial nickel sulphides as well as zones of high-grade semi-massive (containing approximately 30% to 60% sulphides) and massive sulphides (containing approximately 60% to 80% sulphides), with massive sulphide intercepts up to 1.5 meters in thickness grading up to 6.59% nickel. Nickel mineralization has been identified as outcropping at surface, as evident in trenches and

remains open down-plunge. As at the date of the Report, maximum depth of drilling within the Umburana System was approximately 300 meters below surface.

1.3 Exploration Status

Following the commencement of open pit mining operations in 1979, limited exploration work was performed regionally outside of the main Caraíba Mine area prior to Ero Copper's acquisition of MCSA in 2016. Where it did occur, such exploration work focused primarily on exploration permit renewal requirements. The Caraíba

Operations were privatized in 1994 and further exploration work was limited until the formation of the Codelco Joint Venture in 2004 (the “Codelco JV”) which existed until 2008. Under the Codelco JV, work was conducted on several prospects outside of the Caraíba Mine area including an airborne Versatile Time Domain Electromagnetic (“VTEM”) survey over the Vermelhos District. Ground Moving-loop Electromagnetic and Bore-hole Electromagnetic test surveys were also conducted.

Near-surface copper mineralization in the Curaçá Valley has historically been well-defined by geochemical sampling methods. Mineralized mafic-ultramafic intrusions show anomalous copper, nickel, cobalt, gold and silver. Several soil geochemical surveys have been conducted regionally throughout the Curaçá Valley. Geochemistry leveling efforts undertaken by Ero Copper in 2018 to normalize multiple surveys into a central database have been successful and the dataset, supplemented with ongoing soil geochemistry campaigns, continues to be used to define areas of exploration potential.

Historic regional exploration activities also included geophysical surveys performed locally on specific targets. These include ground magnetic, gravity and induced polarization (“IP”) surveys. Regional airborne geophysical surveys consist of a historic magnetic and radiometric survey flown by the Brazil National Department of Mineral Production (“DNPM” which was replaced in 2018 by the new federal mining agency of Brazil, the Agência Nacional de Mineração (“ANM”). Based on known deposits, mineralized mafic-ultramafic intrusions respond well to gravity, IP and electromagnetic (“EM”) surveys including the use of bore-hole EM (“BHEM”).

Since the acquisition of Mineração Caraíba in late 2016, Ero Copper has worked extensively with the broader exploration team of Ero Brasil to compile, organize, validate, analyze and interpret the various historical data sets. A list of prioritized exploration targets using district-wide dataset compilation and validation for Ero Brasil’s exploration permits throughout the Curaçá Valley continues to be worked systematically. Priority targets occur in three main areas or “Districts”: the southern Pilar District, the northern Vermelhos District and the central Surubim District.

In 2018, Ero Copper advanced its exploration efforts and completed approximately 158,000m of drilling with the objective of upgrading and increasing mineral resources and reserves as well as commenced testing new regional targets in the Curaçá Valley. Simultaneously, Ero Copper continued development and production from the Pilar UG Mine, Surubim Mine (which restarted operations in 2022) and commenced production from the Vermelhos UG Mine. In support of its regional exploration efforts, Ero Copper commissioned and completed a ~24,000 line-km airborne electromagnetic and gravity geophysical survey focused on high-grade discoveries throughout the Curaçá Valley. From 2019 through 2022 Ero Copper has continued to increase drilling activities, completing over 200,000m of drilling each year. Drilling remains focused on upgrading and increasing mineral resources and reserves as well as testing of new regional copper and nickel sulphide targets throughout the Curaçá Valley. In support of the current mineral resource and mineral reserve estimate, a total of 1,413,124 m of diamond core drilling was incorporated into the geological model.

1.4 Development and Operations

Mining operations within the Curaçá Valley are currently comprised of two core operations: the Pilar UG Mine and the Vermelhos UG Mine. Production from these two mines currently serves as primary feed for the Caraíba Mill with supplemental feed from the Surubim Mine. Ongoing development and exploration activities include: the continued advancement of the primary ramp and associated infrastructure of the Pilar and Vermelhos underground mines, the construction of the new external shaft to support the Deepening Project, as well as the completion of the Caraíba Mill expansion to 4.2Mtpa, expected to be completed by the end of 2023, in support of the LOM production plan.

1.5 Data Verification and QA/QC

GE21 has visited the Caraíba Operations on a regular basis since 2017 to assess Ero Brasil's exploration data, including overall procedures for drilling, logging, sample handling, control, storage, quality-assurance quality-control ("QA/QC"), database preparation and density measures.

Sample Preparation, Analyses and Security

The Caraíba Operation's sampling procedures are well-defined, in line with the industry best practices. Physical preparation and chemical analysis of core samples are performed by the Caraíba Operation's on-site laboratory, following well-defined procedures. GE21 evaluated the sample collection, analysis and security methods, as well as the procedures used by the Caraíba Operation's internal laboratory.

Quality Assurance and Quality Control

Standard QA/QC procedures implemented by the Caraíba Operations were found to be complete and aligned with industry best practices. A selection of historic information (collected before the current QA/QC procedures were implemented in 2007) as well as historic drilling associated with Project HoneyPot was verified by the authors of the Report via a post-mortem validation process. Data from historic drill holes that could not be validated were omitted from the mineral resource estimate.

The QA/QC process implemented includes the analysis of blanks, standards, pulverized duplicates, coarse tailings duplicates, field duplicates and a second third-party laboratory check-assay. Check-assay analysis of copper grades by a second third-party laboratory was implemented as part of the Caraíba Operations' QA/QC program in 2020. As part of the validation process, GE21 verified 377 holes totaling 96,417m of drilling. Density information has been obtained for over 40 years, and measurement processes are aligned with standard industry practice. Based upon the validation process, GE21 concluded that Caraíba's exploration data is adequate for the current mineral resource and mineral reserve estimate.

1.6 Mineral Resource and Mineral Reserve Estimates

Mineral resource and mineral reserve estimates for the Caraíba Operations were classified and prepared in accordance with the CIM Standards and the CIM Guidelines by Sr. Porfirio Cabaleiro Rodriguez, FAIG, with contributions from others at GE21. All are independent Qualified Persons as such term is defined under NI 43-101.

The authors of the Report validated the current mineral resource estimate that was prepared by Ero Brasil under the supervision of GE21, by preparing a separate 3D model using Leapfrog Geo software, to define and interpolate geological domains. The variograms prepared by Ero Brasil under the supervision of GE21 were reproduced and applied through an independent grade estimate, using Leapfrog Edge software. Resource classification was determined based upon the number of "passes" and results were used to compare the tonnage, grade and contained copper content within each geological domain. Differences of less than 5% of the contained copper content was considered acceptable within each domain. The validation performed did not indicate any material differences between the two estimates.

Mineral reserves were classified according to the CIM Standards and the CIM Guidelines by Dr. Beck Nader, FAIG, of BNA, and Alejandro Sepúlveda from NCL SpA. Both of whom are independent Qualified Persons as such term is defined under NI 43-101.

1.6.1 Mineral Resources

Cut-off grades of 0.51% copper as well as a marginal cut-off grade of 0.34% copper, were used for underground mineral resources and 0.16% copper for open pit mineral resources. Mineral resources were estimated using ordinary kriging within 5m by 5m by 5m block sizes. Mineral resources are shown inclusive of mineral reserves.

Following the application of reasonable prospect for eventual economic extraction ("RPEEE") criteria, Table 1-1 presents the 2022 updated mineral resources by expected mining method for the Caraíba Operations and, due to its importance to the

Company's strategy, Table 1-2 further details the mineral resources for the Project Honeypot areas and Pilar UG Mine as at the Effective Date.

Table 1-1: Caraíba Operations Mineral Resource by Mine Type

Mining Method	Classification	Tonnage (000 tonnes)	Grade (Cu %)	Cu Contained (000 tonnes)
Underground Operations	Measured	34,224	1.44	493.2
	Indicated	35,389	1.48	524.8
	Measured & Indicated	69,613	1.46	1,018.0
	Inferred	35,888	1.15	411.4
Open Pit Operations	Measured	20,803	0.62	128.7
	Indicated	27,486	0.56	154.1
	Measured & Indicated	48,289	0.59	282.8
	Inferred	11,513	0.62	71.4
Total Underground and Open Pit	Measured	55,027	1.13	621.9
	Indicated	62,875	1.08	678.9
	Measured & Indicated	117,901	1.10	1,300.8
	Inferred	47,400	1.02	482.8

Mineral Resource Notes:

1. Mineral resource effective date of September 30, 2022.
2. Presented mineral resources inclusive of mineral reserves. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
3. Underground mineral resources have been constrained within newly developed 3D lithology models applying a 0.45% and 0.20% copper grade envelope for high and marginal grade, respectively. Within these envelopes, mineral resources for underground deposits were constrained using varying stope dimensions of up to 20m by 10m by 35m applying a 0.51% copper cut-off grade, as well as a 0.34% copper marginal cut-off grade. Mineral resources have been estimated using ordinary kriging inside 5m by 5m by 5m block sizes.
4. The Qualified Person for the Mineral Resource estimate is Sr. Porfirio Cabaleiro Rodriguez.
5. Open pit mineral resource estimates have been constrained within newly developed 3D lithology models using a 0.16% copper cut-off grade for open pit deposits. Mineral resources have been estimated using ordinary kriging inside 5m by 5m by 5m block sizes.
6. Mineral resource estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate to the deposit.

Mineral resources which are not mineral reserves do not have demonstrated economic viability.

Table 1-2: Pilar UG Mineral Resources

Pilar UG Mine	Classification	Tonnage (000 tonnes)	Grade (Cu %)	Cu Contained (000 tonnes)
	Measured	3,229	1.86	60.0
	Indicated	6,459	1.88	121.3
	Measured & Indicated	9,687	1.87	181.3
Project Honeypot Areas	Inferred	896	1.07	9.6
	Measured	29,806	1.38	412.4
Total Pilar Mine, including Project Honeypot	Indicated	23,947	1.73	413.3
	Measured & Indicated	53,753	1.54	825.8
	Inferred	16,993	1.42	241.3

Pilar UG Mine Mineral Resource Notes:

1. Mineral resource effective date of September 30, 2022.
2. Presented mineral resources inclusive of mineral reserves. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
3. Underground mineral resources have been constrained within newly developed 3D lithology models applying a 0.45% and 0.20% copper grade envelope for high and marginal grade, respectively. Within these envelopes, mineral resources for underground deposits were constrained using varying stope dimensions of up to 20m by 10m by 35m applying a 0.51% copper

cut-off grade, as well as a 0.34% copper marginal cut-off grade. Mineral resources have been estimated using ordinary kriging inside 5m by 5m by 5m block sizes.

4. The Qualified Person for the Mineral Resource estimate is Sr. Porfirio Cabaleiro Rodriguez.
5. Mineral resource estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate to the deposit.

Mineral resources which are not mineral reserves do not have demonstrated economic viability.

1.6.2 Mineral Reserves

The Mineral Reserves for the Caraíba Operations are derived from the Measured and Indicated mineral resources as defined within the resource block models following the application of economic and other modifying factors further described below. Inferred mineral resources, where unavoidably included within a defined mining shape have been included in the mineral reserve estimate at zero grade.

Table 1-3: Caraíba Operations Mineral Reserve Estimate

	Classification	Tonnage (000 tonnes)	Grade (Cu %)	Cu Contained (000 tonnes)
Reserves, Underground				
Pilar UG, Deepening Extension Zone	Proven	774	1.16	9.0
(Pilar Mine below Level -965)	Probable	10,201	1.76	179.1
Pilar UG, Ex-Deepening & Ex-Honeypot (Pilar Mine above Level -965)	Proven	11,722	1.18	138.3
	Probable	4,118	1.06	43.6
Pilar UG, Honeypot	Proven	2,595	1.66	43.1
	Probable	5,551	1.56	86.6
Vermelhos UG	Proven	2,245	1.57	35.3
	Probable	2,255	1.05	23.7
Total Proven		17,336	1.30	225.6
Total Probable		22,125	1.51	333.1
Total Proven & Probable, Underground		39,461	1.42	558.7
Reserves, Open Pit				
	Proven	9,794	0.50	49.0
Vermelhos (N8, N9 & N5/Siriema)	Probable	22,048	0.53	116.6
	Proven	4,343	0.80	34.9
Surubim (Surubim & C12)	Probable	1,432	0.63	9.0
	Proven	5,011	0.43	21.6
Suçarana	Probable	678	0.42	2.9
Total Proven		19,148	0.55	105.5
Total Probable		24,158	0.53	128.4
Total Proven & Probable, Open Pit		43,306	0.54	233.9
Total Proven		36,484	0.91	331.1
Total Probable		46,283	1.00	461.5
Total Proven & Probable, Open Pit & Underground		82,767	0.96	792.6

Mineral Reserve Notes:

1. Mineral reserve effective date of September 30, 2022. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
2. Mineral reserve estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate for the deposit. Mineral reserves are based on a

long-term copper price of US\$3.30 per lb, and a USD:BRL foreign exchange rate of 5.29, except the underground portion of the Surubim Mine, which applied a copper price of US\$2.75 per lb and a USD:BRL foreign exchange rate of 5.23. Mineral reserves are the economic portion of the Measured and Indicated mineral resources. Mining dilution and recovery factors vary for specific mineral reserve sources and are influenced by factors such as deposit type, deposit shape, stope orientation and selected mining method. Inferred resource blocks, where unavoidably mined, were assigned zero grade. Dilution occurring from Measured & Indicated resource blocks was assigned grade based upon the mineral resource grade of the blocks included in the dilution envelope.

3. The Qualified Persons for the Mineral Reserve estimate are Dr. Beck Nader and Mr A. Sepúlveda.
4. Tonnages are rounded to the nearest 1,000 tonnes; copper grades are rounded to two decimal places. Tonnage and grade values are in metric units; contained copper is reported as thousands of tonnes. Rounding as required by reporting guidelines may result in summation differences.
5. The Surubim Mine mineral reserves are presented inclusive of open pit and underground estimates, as the underground portion comprises a single stope beneath the open pit.

A summary of the mineral reserve estimate parameters is provided below:

Table 1-4: Mineral Reserve Estimate Parameters

Mining Costs (US\$/tonne ore mined)	
Pilar UG Mine	\$29.68
Vermelhos UG Mine	\$27.89
Surubim & C12 OP Mine	\$2.09
Suçuarana OP Mine	\$2.09
N8/N9 & Siriema (N5) OP Mines	\$2.09
Transportation Costs (US\$/tonne to mill)	
Pilar UG Mine	(none)
Vermelhos UG Mine	\$10.05
Surubim & C12 OP Mine	\$3.19
Suçuarana OP Mine	\$1.95
N8/N9 & Siriema (N5) OP Mines	\$6.47
Processing Costs (US\$/tonne milled)	
Pilar & Vermelhos Mines	\$9.31
Surubim & C12 OP Mine	\$5.70
Suçuarana, N8/N9 & Siriema (N5) OP Mines	\$5.70
Metallurgical Recovery (average)	
Pilar UG Mine	90.4%
Vermelhos UG Mine	90.9%
Surubim OP / C12 OP	85.9%
N8/N9 & Siriema (N5) OP Mines	87.5%
Suçuarana OP Mine	84.8%
LME Copper Price (US\$/lb)	\$3.30
Net Smelter Return	97.66%
Transport & Sales Costs (US\$/tonne copper)	\$99.40
CFEM Royalty (after tax)	1.55%
Foreign Exchange Rate (USD:BRL)	5.29

Reserve Parameters Note

1. All road-maintenance costs associated with the Curaçá Valley haul road have been allocated to the Vermelhos UG Mine. Calculated differences between open pit mining and processing costs are a result of additional incurred costs related to contract mining vs. employee operated and the allocation of mining and processing administrative / fixed costs between mines.
2. Metallurgical recoveries vary by deposit. G&A costs of US\$5.45 per tonne were applied to the current operating underground mining operations of the Pilar and Vermelhos Mines.
3. USD:BRL foreign exchange rate of 5.29 applied to all mines, except the underground portion of the Surubim Mine, as the mine design did not change from 2021, and was based on a USD:BRL foreign exchange rate of 5.23. London metal exchange long-term copper price ("LME Copper Price") was based on US\$3.30 per lb. for all mines, except the underground portion of the Surubim Mine, as the mine design did not change from 2021, and was based on US\$2.75 per lb.
4. Compensação Financeira pela Exploração de Recursos Minerais ("CFEM") royalty rate was based on a blended net after-tax rate of 1.55% across all mines, except the Surubim Mine, as the mine design did not change from 2021, and is based on a rate of 2.00%.
5. Transport and sales costs of US\$99.40 per tonne copper has been embedded within the Net Smelter Return value.

Other modifying factors considered in the determination of the mineral reserve estimate include:

- A Selective Mining Unit ("SMU") methodology for estimating dilution has been applied to N8 (7% dilution), N9 (13%), N5 OP (17%), Surubim Mine (17%), C12 OP (12%) and Suçuarana OP Mine (4%). The conventional definition of the SMU is the smallest volume of material on which ore/waste classification is determined and relates to the smallest unit that can be mined selectively. The Vermelhos UG Mine considers 10% dilution, based on mining method and stope geometry. Within the Pilar UG Mine, a 1.0m operational dilution method was applied to the hanging wall and footwall, except for the Deepening Project, which applied 0.5m of operational dilution, resulting in a planned plus operational dilution of 27%, on average. Project HoneyPot and the Upper Levels of the Pilar UG Mine consider 32% dilution, on average.
- Maximum bench height of 15m for open pit mines. Maximum underground stope dimensions based on geotechnical assessments from previous studies and past operating experience within each mining area, combined with evaluation of induced stresses and the calculated rock mass rating ("RMR").
- Vertical retreat mining ("VRM") method with cemented paste fill was selected for the Pilar UG Mine, where the method is currently in use. For the Vermelhos UG Mine, Sublevel stoping with cemented rock fill ("CRF") is currently in use. These mining methods are based on consideration of dip, plunge and thickness of the orebodies, as well as the rock quality designation ("RQD") and overall competence of the host rock.
- Mining recovery of 98% (average) has been applied for open pit mines. The Pilar UG Mine and Vermelhos UG Mine assume 96% and 95% mine recovery, respectively.
- Within designed stopes, all contained material was assumed to be mined with no selectivity. Inferred mineral resources, where unavoidably included within a defined mining shape have been included in the mineral reserve estimate at zero grade. Mining dilution resulting from Measured and Indicated blocks was assigned the grade of those blocks captured in the dilution envelope using the estimated grade within the blocks of the dilution and development model.

Additionally, GE21 and BNA Mining Solutions presents the following accompanying comments to the mineral resource and mineral reserve estimate:

- Ero Brasil holds the surface rights required to support the mine operations considered in the Mineral Reserve estimate. Future development beyond the stated mineral reserves of these areas may require additional acquisition of surface rights.
- As of the date of the Report, Ero Brasil possesses the requisite permits to allow for current mining and processing operations from its core assets of the Pilar UG Mine, the Vermelhos UG Mine and the Surubim Mine is in the process of obtaining mining permits for future production areas commensurate with the envisioned production timelines of those areas as outlined in the LOM plan. Based upon the long operating history of Ero Brasil, the well-established timelines and procedures to obtain such permits, it is the opinion of the QPs that permitting of future production areas within the envisioned timelines does not pose a material risk for the development of the stated mineral reserves.
- Overall, GE21 considers that the components of the mineral reserve estimate (including but not limited to geology, mining, processing, infrastructure, logistics, market, environmental and social considerations) have been conducted at a feasibility level of study and in accordance with NI 43-101.

It is the opinion of the QPs that there are no known mining, metallurgical, infrastructure, permitting, legal, political, environmental, title, taxation, socio-economic, marketing or other relevant factors that could materially affect the potential development of the stated mineral reserves.

1.7 Recovery Methods

The Caraíba Mill has been producing copper concentrate since commissioning in 1979 and has benefited from improvement projects over the years, including most recently those undertaken by Ero Copper. The mill has been designed to process ore from both the Pilar UG Mine, via a production shaft supported by two primary underground jaw crushers as well as ore from throughout the Curaçá Valley (including within the Vermelhos and Surubim Districts) via a primary gyratory crusher located on surface. The concentrator is operated 24 hours per day, 7 days per week with monthly scheduled downtime for routine maintenance. In its current configuration, the plant is capable of processing a nominal 3.2 million tonnes of copper ore per annum assuming 91% availability. Pursuant to the current LOM plan, the milling capacity of the Caraíba Mill will be increased to 4.2 Mtpa through integration of the Company's high intensity grinding mill ("HIG Mill") that was successfully installed during the third quarter of 2020, upgrades to the secondary crusher system due to obsolescence, the installation of a third ball mill, the installation of a Jameson cell and an increase to concentrate filtration capacity. The Caraiba Mill expansion is currently under construction and is expected to be completed by the end of 2023. In support of the LOM production plan, the Company will integrate ore sorting technology into the future open pit operations of the Vermelhos District beginning in 2033.

Through the end of 2021, the Caraíba Mill has produced over 3.0 million tonnes of concentrate containing over 1.0 million tonnes of copper. The Caraiba Mill operating results from 2011 to 2021, and from January to September 30th of 2022 are provided below in Table 1-5 and Table 1-6, respectively.

Table 1-5: Caraíba Mill Processing Results, 2011 to 2021

Year	Caraíba Mill Feed		Copper Production	
	Tonnes	Grade (% Cu)	Tonnes	Recovery (%)
2011	2,749,812	1.09	25,096	83.7
2012	2,717,980	1.07	24,827	85.4
2013	2,940,566	0.91	22,494	84.3
2014	3,014,269	1.01	25,717	84.7
2015	2,836,528	1.11	27,046	86.0
2016	826,759	0.71	4,895	83.5
2017	1,771,209	1.31	20,133	86.8
2018	2,257,917	1.56	30,426	86.3
2019	2,424,592	1.93	42,318	90.5
2020	2,271,625	2.08	42,814	90.5
2021	2,370,571	2.08	45,511	92.4

Table 1-6: Caraíba Mill Processing Results, January to September 2022

Year	Caraiba Mill Feed		Copper Production	
	Tonnes	Grade (%Cu)	Tonnes	Recovery (%)
2022 (Jan-Sep)	2,118,380	1.73	33,707	91.8

The table below shows the production plan for the Caraiba Mill as outlined for the current mineral reserve estimate and LOM production plan. Production has been adjusted from mined totals, where appropriate, for forecast stockpiles and in-process inventories, as well as the integration of ore-sorting. Metallurgical recoveries, including the impacts of ore sorting on the open pit mines of the Vermelhos District are discussed in greater detail in Chapter 13 – Mineral Processing and Metallurgical Testing and Chapter 17 – Recovery Methods.

Table 1-7: 2022 Reserve LOM Plan, Mining Operations, Mineral Reserves

	Unit	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

The 2022 Strategic LOM Plan applies the same mining and recovery methods as the 2022 Reserve LOM Plan. Accordingly, the same mining, recovery and dilution modifying factors have been applied to inferred resources included in the 2022 Strategic LOM Plan. Please refer to Chapter 16 of the Report for additional information. Modified inferred mineral resources are not mineral reserves. Mineral resources that are not mineral reserves do not have a demonstrated economic viability.

The Company's 2022 Strategic LOM Plan is preliminary in nature and includes inferred mineral resources which are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. As such, there is no certainty that the 2022 Strategic LOM Plan will be realized. The Company has an active drill program in place to continuously infill and upgrade inferred mineral resources once underground drill stations have been developed. However, until this work is completed, and the inferred resources have been upgraded to mineral reserves, there is no certainty this material will be converted into mineral reserves. Modified inferred mineral resources are not mineral reserves. Mineral resources that are not mineral reserves do not have a demonstrated economic viability. Please refer to Chapter 16 of the Report for additional information.

1.8 Infrastructure

The Caraíba Operations infrastructure includes fully integrated mining and processing operations located within the Curaçá Valley. All supporting infrastructure required for mining operations are currently in place. The current mining operations include the Pilar UG Mine, the Vermelhos UG Mine and the Surubim Mine. Primary components of installed infrastructure comprising the Caraíba Operations outside of the individual mining operations, include:

- Caraíba Mill processing plant with installed capacity of approximately 3.2Mtpa currently undergoing an expansion to increase installed capacity to 4.2Mtpa by the end of 2023;
- access to water via an Ero Brasil owned, operated and maintained 86km permanent steel pipeline, 80cm in diameter, from the São Francisco River;
- water treatment plant;
- metallurgical laboratory;
- main substation and transformers, each configured with 60 MVA / 230 kV / 13.8 kV;
- power lines supplied by Companhia Hidroelétrica do São Francisco (“CHESF”), a Brazilian State-owned power company;
- ancillary surface buildings including maintenance, security and administration; and
- an inactive Solvent Extraction and Electrowinning (“SX/EW”) operations.

1.9 Environment

As at the date of the Report, the permitting status for the active operations of the Caraíba Operations can be summarized in the following table:

Table 1-10: Summary of Primary Operational Permits

Mine/Project	License Scope	Project Phase	Permit Period		Status
			Start	Expiry	
Pilar UG Mine	Mining Operations	Operational	August 23, 2022	August 23, 2025	Valid
Pilar UG Mine	Alteration	Operational	September 9, 2022	August 23, 2025	Valid
Pilar UG Mine	Chemical Products	Operational	April 4, 2022	October 22, 2023	Valid
Pilar UG Mine	Fuel Station	Operational	May 6, 2020	May 6, 2023	Valid
Surubim Mine	Mining Operations	Operational	April 1, 2022	April 1, 2025	Valid
Surubim Mine	Alteration	Operational	May 27, 2022	May 27, 2024	Valid
Surubim Mine	Fuel Station	Operational	May 18, 2021	May 18, 2024	Valid
Surubim Mine	Deforestation and Fauna Management	Operational	May 27, 2022	May 27, 2024	Valid
Surubim Mine	Creek Deviation	Operational	May 27, 2022	May 27, 2027	Valid
Vermelhos UG Mine	Mining Operations	Operational	October 26, 2022	October 26, 2025	Valid
Vermelhos UG Mine	Fuel Station	Operational	November 11, 2021	October 28, 2024	Valid
Vermelhos UG Mine	Fauna Management	Operational	November 6, 2021	November 6, 2023	Valid
Vermelhos UG Mine	Creek Deviation	Operational	March 15, 2022	March 15, 2027	Valid

Ero Brasil maintains an excellent relationship with the communities throughout the Curaçá Valley, having held regular meetings and consultation sessions with local stakeholders routinely for over 40 years. In support of this relationship, Ero Brasil undertakes several key initiatives annually focused on sustainable community development – it is a core pillar of the Company's operating philosophy.

1.10 Capital & Operating Costs

The total Mineral Reserve LOM Production Plan capital costs estimate is approximately US\$1,083M and have been based on supporting the requirements for the mining and processing operations of the current mineral reserves over the 20-year estimated operating life of the Caraíba Operations. Total capital investments include capitalized mine development as well as ongoing capital requirements primarily in the form of equipment replacement at the end of each unit's useful life. Capital cost projections are based upon vendor quotes and management estimates incorporating historical operating data and previously supplied quotes from the current operations. Capital expenditure estimates reflect the total cost for developing and extracting the current mineral reserves included in the Mineral Reserve LOM Production Plan. Total estimates by category are presented in USD in Table 1-11.

Table 1-11: Total LOM Capital Expenditure Estimate

Category	LOM Total (USD 000s)*
UG Mine Development	346,019
OP Mine Pre-Stripping	151,551
Infrastructure	209,083
UG Equipment	79,273
OP Equipment	43,079
Mineral Processing	99,051
Tailings	44,075
Safety & Environment	73,306
IT & Services	3,799
Other Capital Costs	33,890
Total Capital Cost	1,083,126

(*) BRL amounts converted to USD at a USD:BRL foreign exchange rate of 5.29.

An operating cost model was generated using historic operating performance at the Caraíba Operations, incorporating specific consumption coefficients based on operational data, after application of adjustments for differences between ore sources in the Mineral Reserves LOM Production Plan. Cost estimates were built using first principles incorporating both fixed and variable components to account for production rate variations. Costs were adjusted annually based on the changes to ore sources including rock support, transport, and infrastructure requirements. Underground mining costs consist of the operational costs related to ore extraction at the Pilar UG Mine, Vermelhos UG Mine, and Surubim UG Mine. Direct mining costs include drilling, blasting, and mucking. Indirect costs include ore and waste transport, mine services, and mine supplies. A summary of the average LOM operating costs is presented in BRL per tonne in Table 1-12.

Table 1-12: Average LOM Operating Costs

Cost Parameter, Average LOM	Underground Operations			Open Pit Operations		
	Pilar UG Mine	Vermelhos UG Mine	Surubim Mine, underground	Surubim Mine, open pit	N8/N9 & N5 (Siriema) OP Mines	Suçuarana OP Mine
Mining Cost (BRL per tonne mined)	157.07	147.54	153.36	11.06	11.06	11.06
Transport to Caraíba Mill (BRL per tonne moved)	n/a	53.16	16.88	16.88	34.23	10.32
Processing Costs* (BRL per tonne processed)	49.25	49.25	30.15	30.15	30.15	30.15
Concentrate Transport (BRL per wet metric tonne of concentrate)	404.69	404.69	404.69	404.69	404.69	404.69

(*) Fixed processing costs are allocated to the Pilar UG and Vermelhos UG Mines which comprise the majority of Caraíba Mill feed.

1.11 Conclusions

1.11.1 Mineral Exploration and Geology

The geological descriptions, sampling procedures and density tests that were evaluated were found to be of acceptable quality and in accordance with industry best practices. Data was stored in a standardized database, which was found to be secure and auditable. The complexity of the mineralization controls and the quantity and phases of data in the Curaçá Valley merits the use of visualization and data integration tools that are more advanced than those which had at its disposal at the time of this Technical Report.

While GE21 believes that the current QA/QC program can guarantee the quality of the exploration data used in the resource estimates, GE21 suggests that a chain of custody program be implemented for good measure. GE21 supervised the process through which density was determined and concluded that it aligns with industry best practices.

1.11.2 QA/QC

GE21 performed the evaluation of the data generated after the last validation and concluded that the QA/QC procedures are being followed using the same standards. GE21 considered the standard QA/QC procedures to be in accordance with mining industry best practice and appropriate for use in the current mineral resource estimation.

It was observed throughout the 2021 review period by GE21, that the Caraíba Operations laboratory continues to display a tendency to underestimate the copper assay values when using certified reference material ("CRM") ITAK 825; however, the results of the laboratory when using CRM ITAK 851, which features a similar copper grade range, demonstrate better reproducibility.

1.11.3 Geological Model

The procedure that was adopted to produce the 3D geological model (wireframes), consisting of generating triangulations between interpreted geological cross sections, was executed properly and in accordance with the opinions of GE21. Due to the plunge of the mineralized zone at the Pilar UG Mine towards the north and the east-west geological cross sections, a pattern of sub-vertical discontinuous lenses was created locally within the regions of lower drill hole density.

GE21 noted that, with respect to the integration and interpretation of geological data, limited lithostructural mapping (mine, surface and subsurface) had been undertaken. GE21 also notes that the field interpretation and 3D interpretation were historically focused on interpreting only copper grade, therefore, few vertical and horizontal lithostructural geological sections have been developed which may provide greater understanding and control of aspects relating to the geology and other potential metals of significance in the Curaçá Valley. In 2020, the Caraíba Operations started to adopt 3D implicit modelling techniques based upon grouped lithologies and copper grade shells using Leapfrog software. This methodology was used by GE21 to create 3D validation models and GE21 encourages the expansion of this program at the Caraíba Operations.

1.11.4 Grade Estimation

The variograms that were used in the estimation method are satisfactory and consistent with respect to the grade estimation that was calculated via ordinary kriging, making use of search anisotropy determined in the variographic analysis.

GE21 considers the resource classification model and the analysis of criteria for the classification of those mineral resources, to be satisfactory although some processes could be improved. Such recommended improvements did not impose limitations on the classification of Measured and Indicated mineral resources.

1.11.5 Mineral Resource Estimate

The authors of the Report are not aware of any environmental, permitting, legal, title, taxation, socio-economic, marketing, political or other relevant factors which could materially affect the current mineral resource estimate. It is the opinion of GE21 that the current drilling information is sufficiently reliable to interpret with confidence the boundaries of higher-grade mineralized domains and that the assay data is sufficiently reliable to support estimation of mineral resources. The authors of the Report that validated the mineral resource estimate did not identify overall or local grade biases, as demonstrated by Swath Plot analysis. The authors found that the quality of the data is appropriate for the classification of the mineral resource, in accordance with the CIM Standards and CIM Guidelines.

1.11.6 Mineral Reserve Estimate

GE21 and BNA carried out a detailed review of the current mineral reserves for Curaçá Valley, aimed at demonstrating its technical and profitable extraction for the production and sale of copper concentrate. The results for this review, demonstrated a good adherence using detailed verification procedures performed by the authors of the Report. In general, resulting in differences of less than 1% in the total copper metal contained, which BNA considered acceptable.

Several observations related with the current mineral reserve are worth noting:

- The metallurgical recovery benefits from the commissioned and operational HIG Mill were applied to the underground mining operations of Ero Brasil;
- Within the Vermelhos District ore sorting will be integrated within the open pit operations to reduce transport and processing costs. However, these potential savings have not been considered in current reserve estimation as the global Ero Brasil geology team continues to conduct additional project assessments as at the Effective Date of the Report;
- The core operating mines of the Company (Pilar UG Mine and Vermelhos UG Mine) currently employ a joint reconciliation process in which it is difficult to accurately differentiate mine-to-mill reconciliation from one mine to another; and,

- As at the date of the Report, the ventilation and cooling infrastructure for the Pilar UG Mine, is being upgraded according to the plans developed by Ero Brasil.

The mineral reserve estimation has been performed according to industry best practice and conform to the CIM Standards and CIM Guidelines.

BNA has not identified any mining, metallurgical, infrastructure, permitting, legal, political, environmental, technical, or other relevant factors that could materially affect the potential development of the current mineral reserves.

1.11.7 Recommendations

Regarding the mineral resource estimate, the authors recommend a work program to include the following, most of which can be completed at little or no cost. Estimated costs of the work program are shown in the table below.

- i. Formalize the use of implicit modelling internally throughout the Company, emphasizing structural geology and variation in lithology for domain definition and exploration target integration.
- ii. Implement additional empirical criteria for resource classification, based on the '15% Rule', as commonly attributed to Dr. Harry Parker and since expanded upon in multiple sources of geostatistical literature.
- iii. Expand ongoing geometallurgical studies to encompass all deposits and blends therein to study mill feed interaction. Suggest including standardized laboratory tests as normal operating procedure. Additionally, it is recommended that the Company advance geometallurgical studies for inclusion in mineral reserve definition, in order to classify metallurgical recovery according to the different characteristics associated with each lithological domain rather than by deposit.
- iv. Validate of the certified grade for CRM ITAK 825 due to the observed inconsistencies in assay values, in contrast with the consistent results obtained when utilizing CRM ITAK 851, which has a similar Cu grade range.
- v. Recommend standardizing QA/QC mass controls during assay sample crushing and grinding in order to evaluate the quality of the comminution procedures and ensure no sample loss during sample preparation.
- vi. Install a sample tower to improve the mine to mill reconciliation process for the current operating mines. Such an installation will allow differentiation of ore source reconciliation within the processing plant.
- vii. Improve systems for mineral reserve attribute database management to standardize fleet sizing, economic and consumable parameters, swell factors, dilution and mine call factors as well as store historic block model and design attributes including mathematical pit designs and supporting assumptions within a centralized validated database to improve the application of mineral reserve modifying factors in future studies.

Table 1-13: Proposed Budget for Recommended Work, Mineral Resources

Program	Budget (US\$)
Advance geometallurgical studies	\$200,000
Continued multi-element assays for the Vermelhos District (incl. check assays)	\$50,000
Installation of sampling tower to enhance Mine-to-Mill reconciliation for multiple mining operations	\$500,000
Improvement of reconciliation systems	\$60,000
Advance geotechnical monitoring campaigns and geotechnical-lithology model development	\$100,000
Deepening Inferred Project drill program	\$7,000,000
Total	\$7,910,000

With respect to mineral reserves, additional engineering work should continue alongside the exploration program to promote the confidence of the mine design and costing parameters of the Strategic LOM Plan, including stress modelling and monitoring system for Pilar UG Mine, continued pilot test stopes within the Project Honeycomb areas to calibrate modifying factors, expansion of survey investigation on the historic mining and Baraúna crown pillar stability analysis. The Qualified Person, Dr. Beck Nader of BNA notes the following recommendations related to mineral reserve estimation:

- Continue with the ongoing geometallurgical studies to encompass all deposits and blends therein to study mill feed interaction. Suggest including standardized laboratory tests as normal operating procedure. Additionally, it is recommended that the Company advance geometallurgical studies for inclusion in mineral reserve definition, in order to classify metallurgical recovery according to the different characteristics associated with each lithological domain rather than by deposit.
- Continuing with the studies to improve the mine to mill reconciliation process for the current operating mines.
- Continue with the systems improvement for the mineral reserve attribute database management to standardize fleet sizing, economic and consumable parameters, swell factors, dilution, and mine call factors as well as store historic block model and design attributes including mathematical pit designs and supporting assumptions within a centralized validated database to improve the application of mineral reserve modifying factors in future studies.
- The authors recommend that a drill program for the inferred portion of the Deepening Project (as described in Chapter 24 of the Report) be executed to promote the resource classification from Inferred to Measured or Indicated. Additional engineering work should continue alongside the exploration program to promote the confidence of the mine design and costing parameters of the Deepening Inferred Project. The authors note at the time of the Report, such programs were underway.
- The SMU (Selective Mining Unit) methodology was applied to estimate the dilution for the Open Pit projects and for the Underground projects modeled stope dilution was estimated using the equivalent linear over-break slough (“ELOS”) method including additional 1.0 m in the Hanging wall (HW) and 1.0 m in the Footwall (FW). Future studies will be done to improve the application of mineral reserve modifying factors.

Alejandro Sepúlveda, Qualified Person of NCL SpA recommends the following actions for Project Honeycomb and additional mining areas within the upper levels of the Pilar Mine, including P1P2, R22, MSBW and Baraúna (collectively known as the “Upper Areas”):

- Develop a stress measurement campaign and a comprehensive lithological geotechnical and structural model.
- Utilize the seismic and stress monitoring data for design and scheduling.
- The integration with current operations must produce minimum interferences.
- Prepare a detailed analysis, including boreholes to ensure the backfill type and the strength of the cemented paste fill on those stopes already mined. This is highly recommended for Sector 1 and Sector 2 of the Pilar UG Mine.
- Develop engineering for a comprehensive stope test on the areas limited by historic excavations. The following information should be validated from these tests:
 - o Mining recovery assumptions
 - o Waste/backfill dilution assumptions
 - o Productivity assumptions

Table 1-14: Proposed Budget for Recommended Work for Mineral Reserves

Program	Budget (US\$)
Stress modelling & monitoring for Pilar UG	\$200,000
Pilot test for Honeypot area to calibrate modifying factors	\$1,200,000
Baraúna crown pillar stability analysis	\$20,000
Advance survey on Honeypot historic mining	\$700,000
Total	\$2,120,000

Updated Information with respect to the Caraíba Operations

Set out below are the updated Mineral Resource and Mineral Reserve estimates as at December 31, 2024, which account for drilling activities and mining depletion at the Caraíba Operations since the September 30, 2022 effective date of the Mineral Resource and Mineral Reserve estimates contained in the Caraíba Operations Technical Report. This update has been prepared under the supervision of and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

Mineral Resources are shown inclusive of Mineral Reserves. Mineral Resources, which are not Mineral Reserves, do not have demonstrated economic viability.

Table 1-15: Mineral Reserves and Mineral Resources, December 31, 2024

	Tonnes (000 tonnes)	Grade (Cu %)	Contained Cu (000 tonnes)
Underground			
Proven Reserves	14,164	1.15	163
Probable Reserves	16,710	1.57	263
Proven & Probable Reserves¹	30,874	1.38	426
Measured Resources	53,976	1.08	581
Indicated Resources	47,558	1.17	558
Measured & Indicated Resources	101,534	1.12	1,138
Inferred Resources	71,690	0.82	584
Open Pit			
Proven Reserves	18,101	0.54	99
Probable Reserves	24,083	0.54	130
Proven & Probable Reserves	42,184	0.54	228
Measured Resources	24,086	0.56	134
Indicated Resources	35,464	0.54	193
Measured & Indicated Resources	59,550	0.55	327

	Tonnes (000 tonnes)	Grade (Cu %)	Contained Cu (000 tonnes)
Inferred Resources	29,746	0.49	145
Total Caraíba Operations			
Proven Reserves	32,265	0.81	262
Probable Reserves	40,793	0.96	392
Proven & Probable Reserves	73,058	0.90	654
Measured Resources	78,062	0.92	715
Indicated Resources	83,021	0.90	751
Measured & Indicated Resources	161,083	0.91	1,465
Inferred Resources	101,436	0.72	729

Notes:

1. In the mine design of the Pilar and Vermelhos underground mines, certain stopes include Measured and Indicated as well as Inferred Mineral Resource blocks. In these instances, Inferred Mineral Resource blocks within the defined mining shape were assigned zero grade. Development occurring within marginal ore, above the operational cut-off grade, has also been included in the Mineral Reserve estimate. See below for additional technical and scientific information on the Mineral Reserve and Mineral Resource estimates.
2. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.

Mineral Resources have been constrained within developed 3D grade-shells and lithology models applying a 0.45% and 0.20% copper grade envelope for high and marginal grade, respectively. Within these envelopes, Mineral Resources for underground deposits were constrained to those volumes ensuring Reasonable Prospects for Eventual Economic Extraction after application of 0.51% copper cut-off grade as well as a marginal cut-off grade of 0.33% copper, used for Pilar Mine underground Mineral Resources and 0.52% copper and of 0.34% copper for Vermelhos Mine underground Mineral Resources. For open pit projects 0.13% copper cut-off grade were used for Mineral Resources reporting. Mineral Resources were estimated using ordinary kriging within 5m by 5m by 5m block sizes. Mineral Resources are shown inclusive of Mineral Reserves

The low-grade envelope, using a cut-off grade of 0.20% copper for underground deposits, was used to develop a dilution envelope and development block model to better define the grade of blocks within the dilution envelope in the planning and design of underground stopes and planned development within the mineral reserve estimates and LOM production plan.

Mineral Reserve estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate for the deposit. Mineral reserves

are based on a long-term copper price of US\$3.60 per pound ("lb"), and a USD:BRL foreign exchange rate of 5.10. Mineral Reserves are the economic portion of the Measured and Indicated Mineral Resources. Mining dilution and recovery factors vary for specific Mineral Reserve sources and are influenced by factors such as deposit type, deposit shape, stope orientation, and selected mining methods. In the mine design of the Pilar and Vermelhos underground mines, certain stopes include Measured and Indicated as well as Inferred Resource blocks. In these instances, Inferred Resource blocks within the defined mining shape were assigned zero grade. In 2024, Inferred blocks assigned zero grade totaled approximately 6 tonnes for the Deepening Extension Zone, 2,412 tonnes for the Pilar Underground Mine, and approximately 13,700 tonnes for the Vermelhos Underground Mine. Development occurring within marginal ore, above the operational cut-off grade, has also been included in the Mineral Reserve estimate. Dilution occurring from Measured and Indicated Resource blocks was assigned a grade based on the Mineral Resource grade of the blocks included in the dilution envelope.

As at the date of this AIF, the permitting status for the active operations of the Caraíba Operations is summarized in the following table:

Table 1-16: Summary of Primary Operational Permits

Mine/Project	License Scope	Project Phase	Permit Period		Status
			Start	Expiry	
Pilar UG Mine	Mining Operations	Operational	August 23, 2022	August 23, 2025	Valid
Pilar UG Mine	Alteration	Operational	September 9, 2022	August 23, 2025	Valid
Pilar UG Mine	Chemical Products	Operational	September 4, 2023	October 22, 2025	Valid
Pilar UG Mine	Fuel Station	Operational	April 17, 2023	April 17, 2025	Valid
Pilar UG Mine	Deforestation and Fauna Management	Operational	March 1, 2024	March 1, 2026	Valid
Surubim Mine	Mining Operations	Operational	April 1, 2022	April 1, 2025	Valid
Surubim Mine	Alteration	Operational	May 27, 2022	March 31, 2025	Valid
Surubim Mine	Fuel Station	Operational	April 19, 2024	April 19, 2027	Valid
Surubim Mine	Deforestation and Fauna Management	Operational	May 27, 2022	May 27, 2024	Valid
Surubim Mine	Creek Deviation	Operational	May 27, 2022	May 27, 2057	Valid
Vermelhos UG Mine	Mining Operations	Operational	October 26, 2022	October 26, 2025	Valid
Vermelhos UG Mine	Fuel Station	Operational	August 9, 2023	August 9, 2026	Valid
Vermelhos UG Mine	Fauna Management	Operational	January 3, 2025	January 3, 2029	Valid
Vermelhos UG Mine	Creek Deviation	Operational	March 15, 2022	March 15, 2057	Valid

Notes:

⁽¹⁾ Permit remains valid until such time as renewal application is processed and new permit is issued by regulatory agency.

XAVANTINA OPERATIONS

The scientific and technical information in this section relating to the Xavantina Operations, other than the scientific and technical information under the heading “*Xavantina Operations – Updated Information with respect to the Xavantina Operations*”, is a direct extract of the Executive Summary section contained in the Xavantina Operations Technical Report dated May 12, 2023 with an effective date of October 31, 2022, which has been conformed to be consistent with the formatting and other defined terms within this AIF. The entire Xavantina Operations Technical Report, a copy of which is available for review under the Company’s profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov, is incorporated by reference into this AIF and should be consulted for details beyond those incorporated herein.

The scientific and technical information set out in this AIF under the heading “*Xavantina Operations – Updated Information with respect to the Xavantina Operations*”, has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

Executive Summary

1.1 Introduction

The purpose of the Xavantina Operations Technical Report is to set out and provide background and supporting information on the current Mineral Resources and Mineral Reserves for the Xavantina Operations, a producing underground gold mining operation located in the State of Mato Grosso Brazil and wholly-owned by NX Gold, a company formed under the laws of Brazil. The effective date of the Xavantina Operations Technical Report is October 31, 2022 (in this section of the AIF, the “**Effective Date**”) and the issue date of the Xavantina Operations Technical Report is May 12, 2023. The Xavantina Operations Technical Report has been prepared by GE21 on behalf of Ero Copper of Vancouver, Canada and existing under the BCABC.

Ero Copper is a Vancouver-based publicly listed company that trades on the Toronto and New York Stock Exchanges under the ticker “ERO” and exists under the BCABC. Ero Copper’s principal asset is its 99.6% ownership interest in MCSA. MCSA’s predominant activity is the production and sale of copper concentrate from the Caraíba Operations, which is located within the Curaçá Valley, northeastern Bahia State, Brazil, with gold and silver produced and sold as by-products. Ero Copper’s wholly owned subsidiary, Ero Gold (existing under the BCABC) currently owns a 97.6% ownership interest in NX Gold.

The Xavantina Operation was constructed and commenced commercial production in 2012, with the first full year of production occurring in 2013. As of the end of October 2022, approximately 325,000 troy ounces (herein referred to as “oz” or “ounces”) of gold had been produced from the Xavantina Operations. As of the date of the Xavantina Operations Technical Report, there are 3 drill rigs operating on the property. Exploration activities are underway on the Santo Antônio and Matinha veins focused on infill drilling and extending the known extent of mineralization to depth and along strike.

Doré bars containing gold and silver, as well as lesser amounts of lead, are shipped from the mine weekly by airplane via a gravel airstrip located on the property. Xavantina’s current Mineral Resources and Mineral Reserves are primarily derived from the Santo Antônio and Matinha veins, which are east-west striking, shear-zone hosted, quartz veins. Currently, all production is from the Santo Antônio vein, accessed from a single mine portal and decline and from the Buracão vein. The updated life-of-mine production plan published in Chapter 16 of the Xavantina Operations Technical Report envisions future production from the Matinha vein commencing in the second half of 2023, in addition to continued production from the Santo Antônio vein.

The Xavantina Operations Technical Report and estimates herein have been prepared following the guidelines of the NI 43-101.

The Xavantina Operations Technical Report provides a summary of the work completed by Xavantina and its independent consultants as of the Effective Date. All dollar amounts presented in the Xavantina Operations Technical Report are stated in US dollars unless otherwise specified.

1.2 Property Description and Location

NX Gold owns a 100% interest in the Xavantina Operations, located in the eastern portion of the State of Mato Grosso, Brazil. The mine is located 18km west of the town of Nova Xavantina, with a population of approximately 21,000 people, and approximately 660 km east of Cuiabá, the capital city of Mato Grosso. The total Xavantina Operations property, including exploration licences, measures approximately 133,770 hectares ("ha"). The property is comprised of one mining concession, where all current mining and processing activities occur (registration number 866269/1990), that totals 614 ha and 21 exploration licenses covering an area of approximately 133,156 ha. Within the mining concession, NX Gold holds 100% legal and beneficial ownership, including surface rights. There are no time constraints provisioned with the mining concession; however, operating permits and licenses are extended and renewed under normal course of business according to the nature of each permit and requirements therein. All relevant licenses and operational permits in support of the mine's operation are in good standing.

Within the exploration licences, NX Gold's interests include the right to access the property and to engage in exploration, development, processing, and construction activities in support of mineral exploration and development. Where applicable, compensation is provided to the holder of surface rights for occupation or loss caused by the work. All exploration licenses are currently valid and, for those concessions where expiration dates are approaching, applications have been, or are expected to be submitted for renewal at the time of expiry.

1.3 Geology and Mineralization

Gold and silver mineralization at the Xavantina Operations can be characterized as a shear-zone hosted, sulphide-rich, laminated quartz vein. Economic mineralization on the property, to date, has been hosted within the northeast trending Araés shear zone that cross-cuts the deformed and metamorphosed volcano-sedimentary sequence of the Proterozoic Cuiabá Group and is generally associated with felsic dikes.

Economic gold and silver mineralization at the Xavantina Operations is structurally controlled within the Araés shear zone. Gold and silver are currently mined from a major sulphide-rich, laminated quartz vein dipping approximately 40 degrees to the north-northwest and striking to the west-southwest – the Santo Antonio vein. Prior to the second half of 2019, mining activities occurred in the Brás and Buracão veins, located to the east and west of Santo Antonio, respectively. Vein dimensions are variable throughout the deposit, with an average thickness of 4 meters. Local occurrences of up to 10 meters in vein thickness are common, particularly within the Brás and lower levels of the Santo Antônio veins. The Matinha vein plunges in the same direction as the Santo Antônio vein. Mineralization encountered to date at Matinha is similar to that of the Santo Antônio vein and the economic quartz veins that have been previously mined on the property. Additional work is ongoing to further evaluate continuity of grade and thickness of Matinha and further extend mineralization through exploration drilling. Where gold and silver grades are found in economic concentrations, quartz veins typically contain approximately 2 to 15 percent total sulphide represented mostly by pyrite and galena, as well as minor chalcopyrite, bornite, pyrrhotite, and sphalerite. Higher gold and silver grades are generally associated with galena, chalcopyrite, bornite, and sphalerite.

The known extent of gold mineralization at the Xavantina Operations, both historic and current, is structurally controlled and hosted in four major sulphide-rich quartz veins/bodies, from west to east: Buracão, Santo Antônio, Brás and Matinha. The veins are hosted in strongly deformed metamorphosed sedimentary rock units and diorite that trend generally to the

northeast. The veins exhibit a typical laminated pattern parallel with the vein contacts. The laminations are characterized by alternating quartz bands and foliated host rocks indicative of multiple pulses of mineralized fluids during formation.

The Buracão vein is located on the western portion of the mining concession and includes a primary laminated vein measuring 100 meters in length and dipping 45 degrees to the northwest in the upper portion of the mine and 70 meters in length dipping 40 degrees to the northwest in the lower portion of the mine. The Brás vein is located to the east of the Buracão vein and includes a primary laminated vein measuring 220 meters in strike length in the upper part of the mine and 50 meters in strike length in the lower levels of the mine. The Santo Antônio vein is located between the Brás and Buracão veins and currently extends over 300 meters in strike length. The Matinha vein is located east of the Brás, Santo Antônio and Buracão veins and currently extends over 130 meters in strike length. Continued drill-testing of extensions of the Santo Antônio and Matinha veins is planned for 2023 focused on identifying extensions along strike and to depth. To date, the mineralogical characterization of all of the veins containing economic values of gold and silver at the Xavantina Operations are the same.

1.4 Exploration

The occurrence of gold in the Araés shear zone has been known for over 80 years. Although limited information exists, extensive artisanal (“garimpeiro”) mining activity occurred in open pit and in underground operations prior to the formalization of the mine concessions in 1990. Between 1985 and 2004 two companies, Mineração Araés and Mineração Nova Xavantina, conducted geological and metallurgical studies, geological mapping and a total of 2,306 meters of drilling in 8 diamond drill holes. In 2004, MCSA acquired the mineral and surface rights for the property. Between 2006 and 2012, MCSA drilled a total of 43,536 meters in 213 surface diamond drill holes. In 2013, the property was transferred to NX Gold, a subsidiary of MSCA. Between 2013 and 2015, NX Gold drilled a total of 27,802 meters in 104 surface diamond drill holes and a total of 9,426 meters in 107 underground diamond drill holes. In December of 2016, MCSA (and its interest in NX Gold) was acquired by Ero Copper.

Other exploration activities undertaken from 2013 to 2015 included regional geological mapping, soil sampling and a 1,969 line-kilometer airborne magnetic survey completed in 2013.

Following the acquisition of NX Gold in 2016 by Ero Copper, commencing in 2018, NX Gold initiated the largest series of drill programs undertaken on the property to date, completing a total of 128,875 meters of drilling in 246 surface diamond drill holes and 8,573 meters in 45 underground drill holes, resulting in the discovery and continued delineation of the Santo Antônio and Matinha veins. In total, the 2018-2022 drill programs conducted by the Company represent more than 60% of the total drill meterage drilled on the property. The drill programs followed standard industry procedures including measuring core recovery, rock quality design (“RQD”), taking photos of the core boxes, geological logging of the core, sampling, and assaying. NX Gold inserts a series of certified reference material, blanks, and laboratory duplicates in the stream of samples to verify the assay results as part of its quality assurance, quality control (“QA/QC”) procedures.

1.5 Drilling, Sample Preparation, Analysis and Security

Several drill programs have been conducted at the Xavantina Operations. Prior to the 2018-2022 drill programs, the bulk of prior drilling occurred during the period from 2006 to 2012 when the property was held by MCSA. The global drill hole database at the Xavantina Operations includes 746 drill holes, including 183 underground drill holes, totaling 220,011 meters of drilling, of which, 19,798 meters is from underground drilling.

Drilling and assaying undertaken in support of the current Mineral Resource and Mineral Reserve estimate has been carried out using sampling, security and QA/QC procedures that are in line with industry best practices.

Beginning in 2015, a full QA/QC program meeting generally recognized industry best practices has been in use. Standardized procedures are used in all aspects of the exploration data acquisition and management including surveying, drilling, sampling, sample security, assaying, and database management.

QA/QC measures, as part of the routine core sampling procedures, use blank, standard and duplicate samples to allow verification of the fire assay results produced by the Xavantina laboratory. For the 2014 to 2022 drilling

programs, control samples were inserted at the frequency of 1 gold certified reference, 1 blank sample and 1 duplicate pulp sample every 30 samples.

The authors of the Xavantina Operations Technical Report performed an evaluation of the data used in the determination of Xavantina's Mineral Resource estimate and found the results to be in accordance with industry best practice and appropriate for use in the current Mineral Resource estimate.

1.6 Mineral Resource and Mineral Reserve Estimate

Mineral Resources

The Mineral Resource estimate was prepared in accordance with the CIM Standards and the CIM Guidelines. Grade-shell models using 1.20 grams per tonne ("gpt" or "g/t") were used to generate a 3D model of the Xavantina Operations, and within this, a gold cut-off grade of 1.20 gpt was considered of Mineral Resources based upon a gold price of US\$1,900 per ounce ("oz") of gold and total underground mining and processing costs of US\$72 per tonne of ore mined and processed. Mineral Resources have been estimated using ordinary kriging inside block sizes of 10.0 meters (x), by 10.0 meters (y), by 2.0 meters in height (z), a minimum sub-block size of 1.0 meter (x), by 1.0 meter (y), by 0.5 meters in height (z), and a minimum mining stope dimension of 2.00 meters (x), by 2.00 meters (y), by 1.50 meters in height (z).

The Xavantina Operations Mineral Resource estimate was sub-divided in four mineralized veins: Santo Antônio, Matinha, Brás and Buracão.

Mineral Resource effective date of October 31, 2022.

Table 1 - Mineral Resource Estimate

Classification	Tonnage (000 tonnes)	Grade (gpt Au)	Au Contained (000 ounces)
Measured Mineral Resource (inclusive of Reserves)			
Santo Antônio	246.4	13.35	105.8
Total Measured Resources	246.4	13.35	105.8
Indicated Mineral Resource (inclusive of Reserves)			
Santo Antônio	826.1	10.41	276.5
Matinha	185.8	8.92	53.3
Brás	6.9	3.36	0.7
Total Indicated Resource	1,018.9	10.09	330.6
Measured and Indicated Mineral Resource (inclusive of Reserves)			
Santo Antônio	1,072.6	11.09	382.3
Matinha	185.8	8.92	53.3
Brás	6.9	3.36	0.7
Total Measured and Indicated Resource	1,265.3	10.73	436.4
<i>Inferred Mineral Resource</i>			
Santo Antônio	77.1	9.29	23.0
Matinha	207.1	11.03	73.5

Classification	Tonnage (000 tonnes)	Grade (gpt Au)	Au Contained (000 ounces)
Brás	149.3	4.81	23.1
Buracão	7.7	2.77	0.7
Total Inferred Resource	441.1	8.48	120.2

1. Mineral Resource effective date of October 31, 2022
2. Presented Mineral Resources inclusive of Mineral Reserves. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
3. Grade-shell 3D models using 1.20 gpt gold were used to generate a 3D mineralization model of the Xavantina Operations. Mineral Resources were estimated using ordinary kriging within 10.0 meter by 10.0 meter by 2.0 meter block size, with a minimum sub-block size of 1.0 meter by 1.0 meter by 0.5 meter. Mineral Resources were constrained using a minimum stope dimension of 2.0 meters by 2.0 meters by 1.50 meters and a cut-off of 1.20 gpt based on gold price of US\$1,900 per ounce of gold and total underground mining and processing costs of US\$72.0 per tonne of ore mined and processed. The Mineral Resource estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate to the deposit.

Mineral Reserves

Mineral Reserve estimate was prepared in accordance with the CIM Standards and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate for the deposit. Mineral Reserves are based on a long-term gold price of US\$1,650 per ounce ("oz"), and a USD:BRL foreign exchange rate of 5.29. Mineral Reserves are the economic portion of the Measured and Indicated Mineral Resources. The Mineral Reserve estimate includes operational dilution of 17.4% plus planned dilution of approximately 8.5% within each stope for room-and-pillar mining areas and operational dilution of 3.2% plus planned dilution of 21.2% for cut-and-fill mining areas. It also assumes mining recovery of 92.5% and 94.7% for room-and-pillar and cut-and-fill areas, respectively. Practical mining shapes (wireframes) were designed using geological wireframes / Mineral Resource block models as a guide. The Mineral Reserve estimate for the Xavantina Operations was prepared in accordance with the CIM Guidelines and the CIM Standards by Xavantina Operations engineering personnel under the direct supervision of Guilherme Gomides Ferreira of GE21, an independent qualified person as such term is defined under NI 43-101.

It is the opinion of GE21 that the current Mineral Reserves for the underground operation have been estimated in a manner consistent with industry best practices, CIM Guidelines, and CIM Standards.

Table 2 - Mineral Reserve Estimate

Classification	Tonnage (000 tonnes)	Grade (gpt Au)	Au Contained (000 ounces)
Proven Mineral Reserve			
Santo Antônio	301	10.89	105.4
Matinha	-	-	-
Total Proven Reserve	301	10.89	105.4
Probable Mineral Reserve			
Santo Antônio	799	8.32	213.6
Matinha	213	6.24	42.6
Total Probable Reserve	1,012	7.88	256.2
Total Proven and Probable Reserve	1,313	8.57	361.6

1. Mineral Reserve effective date of October 31, 2022.
2. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.

3. Mineral Reserve estimates were prepared in accordance with the CIM Standards and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate for the deposit. Mineral Reserves are based on a long-term gold price of US\$1,650 per oz, and a USD:BRL foreign exchange rate of 5.29. Mineral Reserves are the economic portion of the Indicated Mineral Resources. Mineral Reserve estimates include operational dilution of 17.4% plus planned dilution of approximately 8.5% within each stope for room-and-pillar mining areas and operational dilution of 3.2% plus planned dilution of 21.2% for cut-and-fill mining areas. Assumes mining recovery of 92.5% and 94.7% for room-and-pillar and cut-and-fill areas, respectively. Practical mining shapes (wireframes) were designed using geological wireframes / Mineral Resource block models as a guide.

The Mineral Reserves for the Xavantina Operations are derived from the Measured and Indicated Mineral Resource as defined within the resource block model following the application of economic and other modifying factors further described below. Inferred Mineral Resources, where unavoidably mined within a defined mining shape have been assigned zero grade. Dilution occurring from Measured and Indicated resource blocks were assigned grade based upon the current Mineral Resource grade of the blocks included in the dilution envelope. Mineral Reserves were classified according to the CIM Standards and the CIM Guidelines by Guilherme Gomides Ferreira of GE21, an independent qualified person as such term is defined under NI 43-101.

Mineral Reserve cut-off grades and parameters applied to the Mineral Reserve estimate are summarized below:

- 4.17 gpt applied to mining stopes, in both room and pillar and cut and fill mining areas, incorporating mining and development, processing, general and administrative and indirect costs;
- 0.80 gpt applied to gallery development incorporating development and processing costs; and,
- 3.23 gpt applied to mining marginal material adjacent to planned mining stopes incorporating mining, development and processing costs.

Mineral Reserve cost assumptions are based on actual operating cost data during the eighteen-month period from May 1, 2021 to October 31, 2022, expressed in USD per tonne run-of-mine ("ROM"), converted at a USD:BRL foreign exchange rate of 5.29 corresponding to the average foreign exchange rate during this same period.

A summary of the Mineral Reserve estimate parameters is provided below:

Table 3 - Mineral Reserve Cut-off Parameters

Mining Costs (US\$/tonne ROM)	\$119.62
Processing Costs (US\$/tonne ROM)	\$36.54
G&A Costs (US\$/tonne ROM)	\$20.37
Indirect Costs (US\$/tonne ROM)	\$24.66
Metallurgical Recovery (average)	91.0%
Gold Price (US\$/oz)	\$1,650
Foreign Exchange Rate (USD:BRL)	5.29

Other modifying factors considered in the determination of the Mineral Reserve estimate include:

- A cut-off grade of 4.17 gpt was applied to mining stopes within the room and pillar the cut and fill mining areas, in the determination of planned mining stopes within the Mineral Resource blocks based on actual operating cost data and past operating performance of the mine.
- The mining method employed for the Santo Antônio vein is inclined room and pillar and cut and fill for the thicker lower-panel of the vein and cut and fill for the thinner upper panel of the vein incorporating paste-fill.

- Maximum stope spans in the room and pillar mining area are based on a design stope of 6 m by 4 m between pillars. For cut and fill mining areas the size of stopes are based on a designed stope measuring 20 m along strike with a frontal slice of 3 vertical meters.
- Within designed stopes, all contained material was assumed to be mined with no selectivity. Inferred Mineral Resources, where unavoidably included within a defined mining shape have been included in the Mineral Reserves estimate at zero grade. Mining dilution resulting from Measured and Indicated blocks was assigned the grade of those blocks captured in the dilution envelope using the current Mineral Resource estimate.

Mineral Reserve effective date of October 31, 2022.

1.7 Mining Methods

The mining methods currently used at the Santo Antônio, and envisioned for the Matinha vein beginning in the second half of 2023, are a combination of inclined room and pillar and cut and fill using paste fill as backfill. Prior to commencing operations within the Santo Antônio vein, the mine employed a combination of inclined room and pillar and cut and fill, with backfill requirements generated from waste development. Mining method selection has been based upon desired selectivity, geometry of the orebodies (both planned and previously mined), geotechnical characteristics of the quartz vein as well as the footwall and hanging wall.

For the purposes of the current Mineral Reserve and life-of-mine production plan, the Santo Antônio vein has been divided into two main panels on -65 (upper) and -170 (lower) based upon the relative geomechanical strength characteristics of these zones. In the upper panel, cut and fill utilizing paste backfill will be employed, while inclined room in pillar, the current mining method, will be employed in the lower panel down to level -350. The deeper portion of Santo Antônio and Matinha veins will be mined using ascending cut and fill. Cemented paste will be employed in the lower panel to enhance pillar recovery following primary panel extraction. In support of mining method selection, the Company undertook extensive geomechanical analysis and 3D modeling and applied accumulated operational knowledge gained through prior mining activities within the Brás and Buracão veins. The mine is currently operating within the Santo Antônio vein using the selected mining methods.

The cut and fill method relies upon removing the ore in horizontal slices, advancing from top to bottom, utilizing cemented paste (approximately 7% cement by weight) to provide support to the next series of advances. Each advance will be 3.0 to 5.0 meters. The inclined room and pillar method, currently in use, is based upon excavating parallel rooms, connected with a cross-section of galleries. Each 6-meter room is supported by pillars measuring approximately 4 meters. During the primary extraction stage, room and pillar mine recovery averages approximately 75%, increasing to approximately 92.5% following secondary extraction of pillars from bottom to top, supported with paste fill.

Based on operating experience, mining rates from inclined room and pillar operations average approximately 4,500 tonnes per month per level in operation. The main operational constraint is the number of jackleg operators per shift and number of developed rooms from which to conduct mining operations.

Total production from Santo Antônio mine, incorporating upper and lower panel averages approximately 15,000 tonnes per month over the life of mine in Santo Antônio. For the Matinha vein, cut and fill mining rate has been planned for approximately 1,200 tonnes per month per level. The total tonnage for the combined production sequence in both veins is approximately 17,300 tonnes per month over the life of mine, in-line with current mining rates. Actual operating performance from current mine operations was used to calculate modifying factors applied to the life of mine. Operational dilution of 17.4% plus planned dilution of 8.5% was applied to lower panel stopes utilizing room and pillar mining method. Operational dilution of 3.2%

plus planned dilution of 21.2% was assumed for stopes within the upper panel and Matinha vein utilizing cut and fill mining method.

1.8 Recovery Methods

The metallurgical process currently in place has been engineered and subsequently optimized over the years to extract gold from ore containing a high content of preg-robbing units capable of adsorbing gold from cyanide solutions. The primary preg-robbing unit is carbonaceous phyllite that exists throughout the Xavantina Operations orebodies, including at Santo Antônio and Matinha.

Metallurgical recoveries at the Xavantina Operations have been sequentially optimized since commissioning to recover gold and silver from the quartz vein orebodies containing this carbonaceous material. Optimization work has resulted in recoveries increasing from approximately 40% in 2012 when the plant was commissioned, to current metallurgical recoveries in excess of 90% (93.3% average was achieved during third quarter of 2022). 2022 production from the Xavantina Operations to the Effective Date is shown below in Table 4.

Table 4 - Xavantina Operations Plant Performance to Effective Date

Jan 1 st – Oct 31 st , 2022	
Mill Feed (tonnes)	167,672
Gold Grade (gpt Au)	6.97
Metallurgical Recovery (%)	92.3
Au Production (oz)	34,684

Processing takes place at the Xavantina plant. Unit operations include a conventional 3-stage crush, milling and a combination of gravity concentration with intensive leaching and flotation followed by carbon in leach (“CIL”) and a desorption circuit. In 2019, a gravity concentrate re-grind mill was added to the circuit to improve gold recoveries and reduce required residence time within the intensive leaching circuit. Gold and silver are produced from solution via electrolysis followed by smelting of doré bars containing both gold and silver. The installed crushing and grinding capacities are approximately 80 tonnes per hour (“tph”) and 45 tph, respectively, resulting in an installed annual plant capacity in excess of 300,000 tonnes per annum. The plant is currently forecast to operate at approximately 72% of its installed capacity, on average, over the current life of mine.

In 2018 and 2019, Xavantina conducted gravity concentration tests to assess recovery of the Santo Antônio orebody in advance of mining operations. A composite sample was taken from 9 drill holes and processed in the Falcon concentrator at Xavantina’s laboratory. Results from this test work demonstrated that the Santo Antônio orebody features similar metallurgical characteristics as the now historic operations of the Buracão and Brás veins. Upon achieving full production rates from the Santo Antônio vein in 2020, several processing initiatives were implemented to improve metallurgical recoveries. These efforts contributed to achieving 93.3% metallurgical recovery during the third quarter of 2022, in-line with current forecast recoveries over the life of mine.

Based on the current Mineral Reserve estimate, the production plan for the Xavantina Plant is set forth below:

Table 5 – Xavantina Operations Production Plan

	Q4 2022*	2023	2024	2025	2026	2027	2028	LOM
Ore Mined & Processed (kt)	22.1	169.5	221.8	227.3	224.7	215.8	231.4	1,312.5
Au Grade (gpt)	12.43	10.56	9.12	9.09	8.71	7.16	6.88	8.57
Recovery (%)	90.5%	93.0%	93.0%	93.0%	93.0%	93.0%	93.0%	92.9%
Gold Production (oz)	7,986	53,507	60,506	61,792	58,492	46,179	47,604	336,066

(*) Q4 2022 production outlines the Mineral Reserve schedule for the two months from the Effective Date of October 31, 2022 to December 31, 2022.

Throughout the life of the Xavantina Operations, the processing plant has successfully processed material with different grades and varying carbon content and has obtained information essential to improving recoveries, under varying operational conditions. The metallurgical recoveries of the Xavantina Operations have increased from 40% in 2012 to up to 93.3% in the third quarter of 2022 (with a 2022 average of approximately 92% prior to the Effective Date), as summarized in the following table.

Table 6 - Historic Production of the Xavantina Operations

Year	Tonnes (t)	Au (oz)	Recovery
2012	137,980	6,654	40%
2013	261,726	26,216	67%
2014	208,259	23,730	83%
2015	226,608	35,115	87%
2016	213,776	29,098	84%
2017	135,013	25,173	88%
2018	117,857	39,808	91%
2019	158,275	29,755	86%
2020	162,642	36,830	91%
2021	171,581	37,798	94%
Jan to Oct 31 st 2022	167,672	34,684	92%
Total	1,961,389	324,861	82%

1.9 Project Infrastructure

The facilities at the Xavantina Operations include the mine portal, the processing plant, tailings storage facility, mechanical workshop, administrative offices, metallurgical laboratory, security gate and guard facilities, medical clinic, a cafeteria and a gravel airstrip used to fly out doré bars after production.

National electrical service is available on site from the town of Nova Xavantina, located approximately 18 km from the Xavantina Operations. The mine is supplied through a 34.5 kV power transmission line (600 kVA), owned by the state public utility, ENERGISA S/A. Water in sufficient quantities to support mining and processing operations is sourced primarily from mine dewatering activities with availability, as needed, from surface run-off and a fully permitted water supply system comprised of a water intake from the neighboring Mortes River, with capacity of 150 cubic meters per hour, and a water main connecting the sumps of the underground mine.

Processed tailings are disposed into two ponds in a closed loop with water loss only occurring through evaporation and in the residual moisture content of the tailings. The first pond receives inert-tailings from flotation, and the second pond receives non-inert tailings from the CIL circuit. The latter tailings pond is lined with a double layer of HDPE, including leach detection devices, and allows for natural degradation of residual cyanide through exposure to sunlight, complemented by a cyanide detoxification circuit.

1.10 Permitting, Environmental and Social Considerations

The Xavantina Operations is a fully permitted gold mine currently in operation. An environmental action program was developed for the Company prior to the mine reaching commercial production. Xavantina follows the guidelines set forth in the program to reduce its impact and recover impacted areas within the vicinity of the mine. Xavantina adheres to a program of frequent environmental monitoring including water quality control, as well as re-vegetation of historic artisanal mining areas that pre-date the commissioning of the mine by NX Gold. As part of its preventative environmental management methods, Xavantina manages all of its waste with an emphasis on proper segregation, storage, transport, and disposal at the end of the life cycle. All waste is delivered to a licensed facility.

The mine's closure plan, adapted to the current social and environmental context within the area of the Xavantina Operations, has been designed to maximize the physical, chemical, biological, and socio-economic stability of the area after mining activities have concluded. The current estimated reclamation liabilities are approximately \$38.7 million Brazilian Real ("BRL" or "R\$").

Xavantina actively maintains excellent relationships with stakeholders of the Nova Xavantina municipality, including community members, social organizations, local government, and landowners near the operation. The Company actively takes part in initiatives supported by regional stakeholders for waste collection, river preservation, educational events, social inclusion, and equity. Xavantina has provided technical and financial support towards the environmental rehabilitation of areas previously impacted by historic artisanal mining activities and has remained an important economic contributor to the region through both direct and indirect jobs, royalties and tax revenue. The Xavantina Operations has all required environmental licenses to conduct its operations. The authors of this Report are not aware of any material environmental or permitting risks to the current operations nor to the envisioned production plan associated with this Mineral Reserves estimate.

1.11 Capital and Operating Costs

Capital and operating costs are shown for 2022 through 2028 reflecting the period of operation from the day immediately following the Effective Date (commencing November 1, 2022). For the purposes of the Technical Report, mine reclamation and closure are assumed to commence on the conclusion of mining of the Mineral Reserves; however, Xavantina is actively undertaking exploration activities to increase the mine's life. It is anticipated that a combination of Mineral Resource conversion, extension of the Santo Antônio and Matinha ore bodies, and delineation of target areas will serve to augment the production profile and increase mine life subject to satisfactory exploration results, as well as technical, economic, legal and environmental conditions.

Total capital costs over the life of mine are estimated at US\$53.1 million. Details of these capital expenditures are shown below in Table 7.

Table 7 - Total LOM Capital Expenditure Estimate

Category	LOM Total (USD 000s)*
UG Mine Development	22,516
Infrastructure	17,528
Safety & Environment	5,337
UG Equipment	2,464
Other Capital Costs	5,222
Total Capital Cost	53,067

*BRL amounts converted to USD at a USD:BRL foreign exchange rate of 5.29.

An operating cost model was generated based on actual operating performance at the Xavantina Operations, utilizing specific consumption coefficients incorporating historic operational data. Cost estimates have been estimated using first principles incorporating both fixed and variable components to account for year-to-year production rate variations. Costs were adjusted annually based on the changes to ore sources including rock support, transport, and infrastructure requirements. Underground mining costs consist of the operational costs related to ore extraction at the Xavantina Mine. Direct mining costs include drilling, blasting, and mucking. Indirect costs include ore and waste transport and mine services. Processing costs include salaries, operating consumables and power. A summary of the average LOM operating costs is presented in BRL per tonne in Table 8.

Table 8 – Average LOM Operating Costs

Cost Parameter, Average LOM	Cost
Mining Cost (<i>BRL per tonne mined</i>)	448.32
Processing Cost (<i>BRL per tonne processed</i>)	246.87
Operational Support Costs (<i>BRL per tonne processed</i>)	111.73
G&A Cost (<i>BRL per tonne processed</i>)	125.55

1.12 Conclusions and Recommendations

The authors of this Report have carried out a review and assessment of the material technical issues that could influence the future performance of the Xavantina Operations and classified the Mineral Resource and Mineral Reserve estimates. The authors found that the procedures and processes adopted by Xavantina personnel to produce geological models were executed according to industry standards. Sampling, QA/QC, security and data control were similarly in line with industry best practices and support the current Mineral Resource and Mineral Reserve estimate. The authors note the following:

- NX Gold holds the surface rights and permits required to conduct the mining operation as outlined in the Mineral Reserve estimate. Future development beyond the stated Mineral Reserves may require the acquisition of additional surface rights.

- b. The authors have carried out the appropriate review to satisfy that the Mineral Reserve can be technically and profitably extracted. Consideration has been given to all technical areas of the operations, the associated capital and operating costs, and relevant factors including marketing, permitting, environmental, land use and social factors. The authors are satisfied that technical and economic feasibility has been demonstrated.

- c. The authors have not identified any known mining, metallurgical, infrastructure, permitting, legal, political, environmental or other relevant factors that could materially affect the development or extraction of the stated Mineral Reserves.

Regarding the Mineral Resource and Mineral Reserve estimation process, the authors recommend a work program that includes the following:

- Despite the high variability of gold grades in duplicate samples, results are inside acceptable limits. It is recommended that a study be performed to determine if the variability for field duplicates is an expected characteristic of the deposit or if reference values should be revised.
- The Santo Antônio target remains open at depth. It is recommended that Xavantina conduct a new drilling campaign to test the extension and continuity of mineralization at depth.
- The Xavantina Operations should continue to undertake additional infill drilling campaigns to upgrade the classification of Mineral Resources of the Matinha vein.
- Undertake new drill programs to evaluate the potential of regional exploration targets.
- Geomechanical characterization work should continue to be carried out on an ongoing basis to support mining operations, mine design and update geotechnical support requirements. It is recommended that numerical modeling and stress displacement analysis be performed to assess stress redistribution and strength factors for both hanging wall and pillars.
- It is recommended that Xavantina conduct additional studies focused on the recovery of pillars included in the Mineral Reserve estimate.
- Xavantina uses a higher cut-off grade for cut and fill mining areas. It is recommended that Xavantina perform a study to better define costs in cut and fill areas to support the cut-off grade.

The hanging wall of the deposit, in the opinion of the authors of this Report, has been demonstrated competent enough the selected mining methods with support implemented as designed. GE21 recommends the Company undertake a third-party geotechnical study to further evaluate the potential of reducing sill pillar thickness with the aim of increasing mine recovery during the primary mining phase of the operations.

A summary of the proposed work program is detailed below. At the time of this Report, 3 drill rigs were active on the property and were undertaking various exploration programs aimed at increasing the current Mineral Resource and Mineral Reserves of the property.

Table 9 - GE21 Recommended Work Program

Program	Budget
Duplicate samples study	\$20,000
Down-plunge exploration drill program in Santo Antônio vein	\$5,000,000
Infill Exploration drill program in the Matinha vein	\$3,000,000
Potential evaluation on other exploration targets including drill program	\$2,000,000
Additional studies regarding the recovery of the pillars	\$20,000
Study to refine the cut-off-grade values for cut and fill areas	\$20,000
Geomechanical numerical modeling and stress-displacement analysis with finite elements	\$100,000
Total	\$10,160,000

Updated Information with respect to the Xavantina Operations

The following update has been prepared under the supervision of and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

On December 3, 2024, the Company announced updated Mineral Resource and Mineral Reserve estimates for the Xavantina Operations, with an effective date of June 30, 2024, which were also prepared under the supervision of and approved by Mr. Monteiro. A copy of the December 3, 2024 press release is available for review on the Company’s website and under the Company’s profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov.

Set out below are the updated Mineral Resource and Mineral Reserve estimates as at June 30, 2024, which account for drilling activity and mining depletion at the Xavantina Operations since the effective date of the Mineral Resource and Mineral Reserve estimates contained in the Xavantina Operations Technical Report. Mineral Resources are shown inclusive of Mineral Reserves. Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability.

Table 10: Mineral Reserves and Mineral Resources, June 30, 2024

	Tonnes (000 tonnes)	Grade (Au gpt)	Contained Au (koz)
San Antonio Vein			
Proven Reserves	223	9.68	69.4
Probable Reserves	1,155	9.76	362.3

Indicated Resources	1,359	11.34	495.4
Measured & Indicated Resources	1,691	10.99	597.8
Inferred Resources	632	10.64	216.2

Notes:

1. All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
2. See below for additional technical and scientific information on the Mineral Reserve and Mineral Resource estimates.

The Mineral Reserve and Resource estimates are effective as at June 30, 2024. Reference herein of \$ or USD is to United States dollars and BRL is to Brazilian reais. Mineral Reserves for the Xavantina Operations have been estimated using a gold price of \$1,900/oz, and the exchange rate used for mineral reserve and resource estimates was USD/BRL 5.10.

Grade shells using a value of 1.20 gpt gold were used to generate a 3D mineralization model of the Xavantina Operations. Within the grade shells, mineral resources were estimated using ordinary kriging within 10 meter by 10 meter by 2 meter block size, with a minimum subblock size of 1.0 meter by 1.0 meter by 0.5 meter, and the mineral resource estimate was constrained using a minimum stope dimension of 2.0 meters by 2.0 meters by 1.5 meters, a cut-off of 1.20 gpt based on underground mining and processing costs of US\$72 per tonne and a gold price of US\$1,900 per ounce.

The Mineral Reserve estimates were prepared in accordance with the CIM Standards and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate for the deposit as more

particularly set out in the Xavantina Operations Technical Report. Mineral Reserves are the economic portion of the Measured and Indicated Mineral Resources. Mineral Reserve estimates include operational dilution of 17.4% plus planned dilution of approximately 8.5% within each stope for room-and-pillar mining areas and operational dilution of 3.2% plus planned dilution of 21.2% for cut-and-fill mining areas. Mining recovery of 92.5% and 94.7% assumed for room-and-pillar and cut-and-fill areas, respectively. Practical mining shapes (wireframes) were designed using geological wireframes / mineral resource block models as a guide.

TUCUMÃ PROJECT

The scientific and technical information in this section relating to the Tucumã Project, other than the scientific and technical information under the heading “*Tucumã Operations – Updated Information with respect to the Tucumã Operations*”, is a direct extract of the Executive Summary section contained in the Tucumã Project Technical Report dated November 12, 2021 with an effective date of August 31, 2021, which has been conformed to be consistent with the formatting and other defined terms within this AIF. The entire Tucumã Project Technical Report, a copy of which is available for review under the Company’s profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov, is incorporated by reference into this AIF and should be consulted for details beyond those incorporated herein.

The scientific and technical information set out in this AIF under the heading “*Tucumã Operations – Updated Information with respect to the Tucumã Operations*”, has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

Executive Summary

1.1 Introduction

Ero commissioned Ausenco Engineering Canada Inc. (in this section of the AIF, “**Ausenco**”) to compile a Technical Report (in this section of the AIF, the “**Report**”) for a Feasibility Study Update (in this section of the AIF, the “**FSU**” or the “**2021 FSU**”) on the Boa Esperança deposit, part of the Tucumã Project (in this section of the AIF, the “**Project**” or the “**Boa Esperança Project**”) in the Southern Pará State of Brazil.

1.1.1 Key Outcomes

The Project demonstrates the financial outcomes (US dollars) summarized below based on Cu prices of US\$3.80/lb in 2024, US\$3.95/lb in 2025 and US\$3.40/lb in 2026+:

- Pre-tax
 - o NPV of US\$464.6 million at an 8% discount rate
 - o internal rate of return (“**IRR**”) of 48.6%
 - o Payback period of 1.3 years
- Post-tax
 - o NPV of US\$379.6 million at an 8% discount rate
 - o IRR of 41.8%
 - o Payback period of 1.4 years
- Total capital costs of US\$507 million, comprised of:
 - o Initial capital cost of US\$294 million
 - o Sustaining capital cost of US\$196 million
 - o Closure cost of US\$24 million

- o Salvage value of US\$7 million
- Total operating costs of US\$801 million

1.2 Terms of Reference

The Report supports disclosure by Ero Copper in the news release dated September 28, 2021, entitled, “Ero Copper Announces Results of Optimized Feasibility Study for Boa Esperança Project – Longer Mine Life and Higher Annual Copper Production.”

The firms, companies and consultants who are providing Qualified Persons (“QPs”) responsible for the content of the Report, which is based on the FSU completed in 2021 and supporting documents prepared for the 2021 FSU, are, in alphabetical order: Ausenco; Ero, and NCL Ingeniería y Construcción SpA. (in this section of the AIF, “NCL”).

The Report presents Mineral Resource and Mineral Reserve estimates for the Project, and an economic assessment based on open pit mining operations and a conventional processing circuit that would produce copper concentrate.

All units of measurement in the Report are metric, unless otherwise stated. The monetary units are in US dollars, unless otherwise stated.

1.3 Property Description and Location

The Boa Esperança copper deposit is in the municipality of Tucumã, Pará State, Brazil. The site is located approximately 40 km to the southwest of the town. Tucumã can be accessed by state highway PA-279, which connects the town of Xinguara to the town of São Felix do Xingu, along a stretch of road that runs for approximately 160 km. The junction of PA-279 with federal highway BR-155 is in Xinguara, which is the main highway leading to the city of Marabá, situated approximately 220 km north of Xinguara.

1.4 Ownership

MCSA acquired the Boa Esperança copper deposit concession from Corporación Nacional del Cobre (in this section of the AIF, “Codelco”) in 2007 and became the legal owner of the mineral rights to the Boa Esperança copper deposit. In December 2016, Ero acquired approximately 85.0% interest in MCSA. In June 2017, Ero acquired an additional 14.5% by subscribing for shares from treasury for a total interest in MCSA of approximately 99.5%. In December 2017, the Company acquired additional shares of MCSA, increasing its ownership interest in MCSA to approximately 99.6%.

The legal status of MCSA's mining rights is as follows:

- The Final Exploration Report was presented to the ANM on April 10, 2008 and was approved by the ANM on July 30, 2009;
- MCSA applied for a Mining Concession by filing an Economic Exploitation Plan (*Plano de Aproveitamento Econômico* or PAE) with the ANM on May 5, 2010;
- The preliminary environmental license was filed with the ANM on March 22, 2012;
- The PAE technical analysis was completed and considered suitable for granting on July 30, 2013;
- Ero received the Installation License (“LI”) on August 30, 2021, which will allow for the commencement of surface and civil construction activities
- A formal request with the Para State environmental agency, *Secretaria de Estado de Meio Ambiente e Sustentabilidade* (“SEMAS”) will be made to incorporate changes in the Project's scope as outlined in the FSU.

- SEMAS is the agency responsible for approval of the Operating License (“**LO**”) for the Project, which is planned to be issued at the time of commercial production; and

- The estimated Mineral Resources and Mineral Reserves disclosed in the Report are completely contained within the Boa Esperança mineral rights held by MCSA. MCSA is the holder of required surface rights for the envisioned operations. It is expected that full title to the land will be transferred to MCSA after conclusion of an administrative procedure with the National Institute of Colonization and Land Reform (“**INCRA**”) to clear such surface rights from its prior classification as a resettlement area.

The site is free and clear of any environmental liabilities, and all required permits for construction activities are encompassed by the LI issued on August 30, 2021.

1.5 Geology and Mineralization

The Carajás Mineral Province, where the Boa Esperança copper deposit is located, is on the east side of the Amazon Craton and is considered one of the most important mineral provinces in Brazil. It is a region of high economic importance, as it hosts the world’s largest known high-grade Fe deposits, as well as world-class Cu-Au deposits, such as Salobo, Sossego, 118, Cristalino and Igarapé Bahia-Alemão. Deposits of Mn, Ni, Cr, Al and Zn have also been identified in the province. The existence of high-grade significant deposits elsewhere in the region provides no assurance regarding the size, extent, grade, or value of any deposits or prospective deposits within the area of the Boa Esperança Project.

The Carajás Mineral Province encompasses two distinct tectonic domains, both Archean in age. The South Block, which is the older of the two (3.0 to 2.86 Ga) and where the Boa Esperança deposit is located, is called the Rio Maria Block, and contains a typical granite-greenstone belt terrain. The North Block, which is the younger domain (2.8 to 2.5 Ga), is called Carajás and is composed of volcano-sedimentary rocks and granitoids, which host the large Fe, Cu-Au, Mn, Ni and Zn deposits in the province. These two blocks are products of the juxtaposition of volcanic island arcs and plutonic-like Andes environments, associated with an intra-continental mantle plume.

The Boa Esperança copper deposit occurs within an isolated hill, which is elongated in an NNE direction and located 38km SW following a straight line from the town of Tucumã. The topographic high is mainly comprised of breccias composed of quartz and magnetite, which cut the Neoarchean biotite-granite (2.78 Ga), the host of the copper mineralization. The Neoarchean biotite granite intrudes into the Mesoarchean Rio Maria granodiorite (2.85 Ga).

Mineralization consists of a series of brecciated zones, which are aligned N60°-70°E and incline in a SE direction (60°-70°SE).

1.6 Exploration

Over the years, Project exploration has consisted of multiple campaigns of ground geological mapping and sampling, soil geochemistry, ground geophysical surveys and exploration drilling conducted by both Codelco, MCSA, and more recently Ero. Available exploration datasets used in the FSU include detailed topography surveys, soil geochemistry surveys, geological mapping, magnetic surveys, induced polarization (IP) surveys, as well as a drill core database totalling approximately 58,000 meters of drilling, petrographic studies, and radiometric dating drilling and sampling.

Between 2003 and 2013 a total of 165 core drill holes totaling approximately 57,972 m were completed. Drilling was executed by Codelco over four drillhole campaigns in 2003–2004, 2005 and 2006, consisting of 62 core drillholes, totaling 21,956.12 m on a 200 x 200 m drilling grid that was infill drilled to 100 x 100 m. MCSA completed 103 core holes between 2008–2013, totaling 36,016.13 m. Infill drilling was completed to approximately 50 and 25 m centers for the core of the deposit in support

of the Project. In 2021, Ero commenced an exploration program to further extend the known limits of the deposit. There were no results available from the 2021 exploration program to incorporate into the FSU.

All exploration drilling was conducted using I core methods. Holes were drilled at an HQ size (63.5 mm core diameter) through soil, saprolite and weathered rock and were reduced to NQ size (47.6 mm) upon reaching fresh rock. Average drill core recoveries were reported as exceeding 98%.

Sampling intervals were identified and marked in the core boxes according to the sampling plan, thus providing a physical register of sample identification and location. The core was split in half using a diamond saw and then quartered, with one quarter sent for analysis and the remaining three quarters stored for future reference. At the end of the sampling process the identifying description on each sample bag was verified by comparing the description in the core boxes to the corresponding location. If correct, the sample was sealed in the bag for dispatch.

Codelco used the SGS Geosol laboratory in Parauapebas, Pará, Brazil to prepare all samples from the 2003–2006 drilling campaigns. MCSA used the same laboratory to prepare all samples from the 2008–2009, 2012 and 2013 drilling campaigns. Sample analyses were carried out by SGS Geosol in Vespasiano, Minas Gerais, Brazil for these campaigns. SGS Geosol is an internationally recognized mineral testing laboratory and is independent of the Company.

MCSA used the Intertek laboratory in Parauapebas, Pará, Brazil (“**Intertek**”) to prepare all samples from the 2010 drilling campaign. Intertek is an internationally recognized mineral testing laboratory and is independent of the Company.

1.7 Data Verification

MCSA provided Ausenco with external analytical control data containing the assay results of the quality control samples from the Boa Esperança Project. All data was provided in Microsoft Excel spreadsheets. Control samples (blank and standard reference materials) were summarized in time-series plots to highlight their performance. Paired data (pulp duplicates) were analysed using bias charts, quantile-quantile plots, and relative precision plots. The external quality control data produced for this project represent approximately 5% of the total number of samples assayed.

MCSA used one standard reference material (High-Grade) during the 2008/2009 campaign. In more recent years, three standard reference materials (Low-Grade, Medium-Grade and High-Grade) were used.

SGS Geosol and Intertek delivered consistent Cu results, mostly within two standard deviations. The results for the High-Grade (“**HG**”) standard reference material shows consistently lower values than expected in all drilling campaigns. This shows that there is a negative bias for the HG standard reference material.

Paired assay data examined by Ausenco show that assay results can be reproduced by the SGS Geosol and Intertek laboratories from duplicate pulp with high confidence. In general, Ausenco considers the analytical quality control data delivered by the laboratories used by MCSA and reviewed by Ausenco to be sufficiently reliable for the purpose of resource estimation.

MCSA is currently including the use of certified blank samples and certified standard reference materials in its quality control programs.

1.8 Metallurgical Testing

Boa Esperança copper deposit is considered as a variant of an Iron Oxide Copper Gold (IOCG) deposit type, with the presence of higher sulphur minerals and a high quartz content, the absence of pervasive hydrothermal alterations of the host rock, and the absence of gold. Granite (“**GRA**”) and breccia (“**BXX**”) are two main rock types recognized from the deposit.

A series of metallurgical test programs were performed between 2007 and 2015 to assess the metallurgical responses of the mineral samples from the deposit. In the tests reviewed, master composite samples were

constructed as a blend of 50% GRA and 50% BXX, while variability composite samples were prepared to represent the individual GRA and BXX rock types.

The initial test programs by Centro de Investigación's Minero Metalúrgicas (“**CIMM**”) were conducted with one master sample which confirmed the selection of a sequential flotation flowsheet. In 2012, SGS Geosol verified the flowsheet by using variability samples. Later in 2015, SGS Geosol investigated the amenability of a jigging pre-concentration step, and conducted subsequent flotation tests on the pre-concentrated samples, as well as the treatment of the flotation tailings. The main observations from the tests are shown as follows:

- Copper concentrate grade assaying at 28% Cu or higher were achieved from master samples. The 2015 SGS Geosol test program with a pre-concentration stage produced the highest concentrate grade of 28.9% Cu.
- Copper recovery to the head feed of 95.5% and 91.5% were achieved in the CIMM and 2012 SGS Geosol test work programs, respectively. The 2015 SGS Geosol tests produced a lower recovery of 85.1% to the head feed because of the pre-concentration stage, even though a similar copper stage recovery of 91.7% was achieved.
- Copper recovery and copper concentrate grade achieved from tests on variability samples in the 2012 SGS Geosol test program varied significantly. Copper grade ranged between 21.2 and 29.3% Cu while copper recovery varied between 77.5 and 95.4%.
- Copper concentrate samples present only trace-level deleterious elements.

Additional test programs were performed by equipment suppliers to determine the crushability and grindability of the ore samples, as well as the dewatering characteristics of the flotation concentrate and tailings samples. A fast-settling rate was observed for both copper concentrate and final tailings. The copper concentrate filtration can achieve a moisture level between 8 – 10%; no filtration tests were performed on tailings samples.

As part of this study, Ausenco completed a circuit review to determine the viability of including jigging pre-concentration. The evaluation indicates that the mass rejection in the jigging circuit does not result in significant reduction of the downstream plant and the associated capital cost requirements. The copper contained in the pre-concentration tailings can add significant value to the project when recovered to the final copper concentrate. As a result, a sequential flotation process with no pre-concentration stage is selected for the project. This flowsheet as well as the relevant locked cycle flotation test results comprise the basis for the copper recovery projection.

1.9 Mineral Resource Estimation

Mineral Resources are detailed in Table 1-1 and have an effective date of 31 August 2021 (in this section of the AIF, the “**Effective Date**”); they are presented inclusive of Mineral Reserves. Mineral Resources that are not Mineral Reserves have no demonstrated economic viability.

The mineral resource estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical and/or classical methods, plus economic and mining parameters appropriate to the deposit.

Block model tonnage and grade estimates for the Boa Esperança Project were classified according to the CIM Standards and the CIM Guidelines by Mr. Emerson Ricardo Re, RM CMC (0138) and MAusIMM (CP) (305892), Ero Resource Manager and QP as defined under NI 43-101.

A 3D geologic model was developed for the Boa Esperança Project. Geologically constrained grade shells were developed using various copper cut-off grades to generate a 3D mineralization model of the Boa Esperança Project. Within the grade shells, mineral resources were estimated using ordinary kriging within a 2.0 m by 2.0 m by 4.0 m block size. Within the optimized resource open pit limits, a cut-off grade of 0.20% copper was applied based upon a copper price of US\$6,400 per tonne, net smelter return ("**NSR**") of 94.53%, average metallurgical

recoveries of 90.7%, mining recovery of 91.0%, dilution of 5.0%, mining costs of US\$3.10 per tonne mined run of mine ("ROM"), processing and costs of US\$5.65 per tonne ROM, and G&A costs of US\$5.65 per tonne ROM. Unconstrained Inferred Mineral Resources have been stated at a cut-off grade of 0.51% copper with a marginal cut-off grade of 0.32% copper based upon a copper price of US\$6,400 per tonne, NSR of 94.53%, mining recovery of 100%, average metallurgical recoveries of 90.7%, mining costs of US\$14.71 per tonne ROM, processing and costs of US\$5.70 per tonne ROM, and G&A costs of US\$2.60 per tonne ROM. Stated Mineral Resources estimates are inclusive of Mineral Reserves.

Table 1-1: Mineral Resource Statement as of 31 August 2021

Boa Esperança Copper Project	Measured Resources			Indicated Resources			Measured and Indicated Resources			Inferred Resources		
	Tonnes	Grade	Contained	Tonnes	Grade	Contained	Tonnes	Grade	Contained	Tonnes	Grade	Contained
	(000's)	(%)	(000's)	(000's)	(%)	(000's)	(000's)	(%)	(000's)	(000's)	(%)	(000's)
Open Pit High-Grade	7,117	2.16	153.65	1,661	2.27	37.63	8,778	2.18	191.3	40.5	2.69	1.09
Open Pit Low-Grade	25,476	0.60	152.00	13,433	0.51	68.43	38,909	0.57	220.4	514.4	0.49	2.51
Subtotal Mineral Resources	32,593	0.94	305.65	15,095	0.70	106.06	47,687	0.86	411.7	554.8	0.65	3.60
Underground High-Grade										1,354	2.24	30.38
Underground Low-Grade										9,681	0.60	58.24
Subtotal Mineral Resources										11,035	0.80	88.62
Total Copper Mineral Resources	32,593	0.94	305.65	15,095	0.70	106.06	47,687	0.86	411.71	11,590	0.80	92.22

Notes to Accompany Mineral Resource Estimate:

- Mineral Resources have an effective date of 31 August 2021 (being the Effective Date) and were prepared by Emerson Ricardo Re, MSc, MBA, MAusIMM (CP) (No. 305892), Registered Member (No. 0138) (Chilean Mining Commission), Resource Manager of Ero and a QP as such term is defined under NI 43-101.
- Tonnes and grade are rounded to reflect approximation.
- Open Pit Mineral Resources are stated at a cut-off grade of 0.20% Cu and are fully contained within an optimized pit shell.
- Underground Mineral Resources are stated within an optimized stopes below the pit shell. A cut-off grade of 0.51% Cu and a marginal cut-off grade of 0.32% Cu were applied in the stope optimization.
- Stated Mineral Resources are inclusive of Mineral Reserves.
- Mineral Resources that are not Mineral Reserves and have not demonstrated economic viability. Mineral Resource estimates do not account for mineability, selectivity, mining loss and dilution. These Mineral Resource estimates include Inferred Mineral Resources that are normally considered too geologically speculative to allow for the application of economic considerations that would see them categorized as Mineral Reserves. There is also no certainty that these Inferred Mineral Resources will be converted to Measured and Indicated categories through further drilling or into Mineral Reserves once economic considerations have been applied.

1.10 Mineral Reserve Estimation

Mineral Reserves are detailed in Table 1-2 and have an effective date of 31 August 2021 (being the Effective Date). These are based on the 2021 FSU production schedule, which was constrained by a designed pit. Measured and Indicated Mineral Resources were used to support the statement of Proven and Probable Mineral Reserves. Measured Resources were converted to Proven Mineral Reserves, and Indicated Mineral Resources were converted into Probable Mineral Reserves. These are reported as delivered to the mill and are therefore fully diluted.

Table 1-2: Mineral Reserves Statement as of 31 August 2021

Reserves Category	Tonnage t '000	Copper %Cu	Contained Copper t '000
Proven Reserves	30,674	0.89	273.2
Probable Reserves	12,378	0.67	83.4
Total Mineral Reserves	43,052	0.83	356.6

Notes to Accompany Mineral Reserves Estimate:

1. Mineral Reserves have an effective date of 31 August 2021 (being the Effective Date) and were prepared by Mr. Carlos Guzman, RM CMC (0119) and FAusIMM (229036), an employee of NCL and a QP as such term is defined under NI 43-101.
2. Mineral Reserves are reported as constrained within Measured and Indicated pit designs and are supported by a mine plan featuring a constant throughput rate and cut-off optimization. The pit designs and mine plan were optimized using the following economic and technical parameters: copper price of US\$3.00/lb; average recovery to concentrate is 91.3%; copper concentrate logistics costs of US\$108.2/wmt; transport losses of 0.2%; copper concentrate treatment charges of US\$59.5/dmt, US\$0.0595/lb of copper refining charges; copper payability of 96.3%; average mining cost of US\$2.47/t-mined; process cost of US\$7.74/t-processed and G&A costs of US\$3.83/t-processed; average pit slope angles that range from 30° to 50° and 2% royalty.
3. Mineral Reserves estimate considered an SMU of 2m x 2m x 8m, an overall dilution of 3.3% and a metal loss of 0.3%.
4. Rounding as required by reporting guidelines may result in apparent summation differences between tonnes, grades, and metal content.
5. Tonnage measurements are in metric units. Copper grades are reported as percentages and payable copper as tonnes.

Mineral Reserves were derived by incorporating modifying factors into the Mineral Resource model. Design and production scheduling were then undertaken within mine planning software. This process incorporated appropriate modifying factors and the application of cut-off policies and economic analysis. These results were then incorporated into the 2021 FSU, which supports the statement of Mineral Reserves at the Project.

Previously stated Mineral Reserves as of June 1, 2017, were 19.5 Mt at 0.95 %Cu. (refer to Chapter 6.0 for further detail). The increase of the current estimate to almost double the contained copper is mainly because of the increased throughput, higher metallurgical recoveries as a result of removing the jigging unit operation, and the Mineral Resource modelling technique, which applied a more selective approach and with less added in-situ dilution than used in 2017.

1.11 Open Pit Geotechnical

Geotechnical investigations for previous feasibility studies for the Boa Esperança Project were completed in 2012 and 2017. The overall objective of the evaluation was to determine the pit slope geometries. Design recommendations for the pit slope angles were provided.

A field data collection program was designed and carried out for the Project with the primary objective of rock mass characterization and discontinuity orientation to serve as the basis of geotechnical model development. Geotechnical logging, point load testing, and orientation of discontinuities intersected by core recovered from four boreholes were conducted by MCSA geologists to support this investigation. Rock quality designation (RQD) data for a total of 109 previous resource and condemnation drillholes was also analysed and used in the development of the geotechnical model and subsequent analyses.

Geomechanical testing was conducted on rock core samples obtained from the two geotechnical drillholes to determine strength characteristics for the in-situ materials. The overall laboratory program consisted of direct shear, uniaxial and triaxial compressive strength, direct tensile strength tests, and measurements of unit weight and elastic properties. A total of 56 laboratory tests were conducted on samples selected to represent the range of the rock conditions observed in the two geotechnical holes.

In addition to the rock core testing program, two relatively undisturbed block samples of saprolite were obtained from within the open pit area and tested by Pattrol Laboratory, located in Belo Horizonte, Brazil. The saprolite testing program included triaxial shear strength and classification testing.

At the Boa Esperança Project, three distinct domains of rock quality exist, i.e., the upper, saprolite and weathered rock (“**Saprock**”) and the fresh granitic rock below (“**Fresh Rock**”). The depth of the saprolite and weathered rock zone varies across the site from approximately 15 m around the outer edges of the deposit, up to 125 m in the Boa Esperança hill in the central portion of the deposit. The saprolite materials logged generally classify as completely weathered rock to residual soils.

Below the Saprolite and Saprock Zones, the bedrock is generally fresh, showing few signs of oxidation and minimal fracturing resulting in a very competent rock mass. Rock mass ratings (RMR) for the fresh rock ranged between 49 and 80 with an average value of 69 according to the Bieniawski (1989) criteria. Hydrothermal breccia structures and rhyodacite dikes within the rock mass are generally well healed and expected to be of similar competency as the granitic host rock and consequentially have been included within the Fresh Rock domain.

In addition to the granitic rock, a schist unit exists at the surface to the north and east, potentially outcropping in the upper final north pit wall. Currently, the schist unit is poorly understood with very few actual drill core intercepts. The few drillhole intercepts with this unit at depth suggest a rock mass similarly competent to the granite host rocks, without strong cleavage or well-developed foliation.

Based on the oriented core data, the primary discontinuity sets at the Boa Esperança Project are sub-vertical, northeast, and northwest striking and sub-horizontal. A secondary, moderately northwest dipping set also appears but relatively infrequent compared to the other sets.

To optimize the slope design at the Boa Esperança Project, both global and bench scale stability for the proposed open pit were performed. Overall slopes were analysed with limit equilibrium methods using the Hoek-Brown (2002) rock mass shear strength criteria for the Fresh Rock and Mohr-Coulomb criteria for the highly weathered Saprolite Zone. Saprolite slopes were considered to be drained and conservatively high groundwater surfaces were used in the Fresh Rock.

Overall and high inter-ramp slopes were analyzed using commercially available geotechnical modelling software packages Slide 6.0 and Phase2. The limit equilibrium analysis results for the current final feasibility pit design showed a very low probability of failure and relatively high factors of safety (average of 2.1) for even the conservatively high phreatic surface assumed (10 to 25 m behind pit face). A safety factor of 1.7 was also demonstrated with Phase2 using the mean rock mass parameter values. This confirms that stable slopes at the Boa Esperança Project, within the Fresh Rock, will be controlled primarily by geologic structure below the oxide boundary and not by rock mass strength. Stable slopes within the saprolite zone are anticipated to be controlled primarily by groundwater pressures which will be relieved with horizontal drain holes.

Slope kinematics were evaluated with a qualitative risk assessment for each pit sector. The purpose of the assessment was to judge the risk or likelihood of plane shear and wedge type failures occurring in a given pit sector. Based on the wall orientations of the current pit design and the steep dip angle of the primary structures at the Boa Esperança Project, all sectors were identified as having very low to low risk of structural instabilities.

Table 1-3 shows the pit slope geometry proposed by Ausenco for each material type.

Table 1-3: Pit Slope Geometry

	Saprolite	Saprock	Fresh Rock
Bench Height (m)	8	8	16
Minimum Bench Width (m)	6	6	8
Bench Face Angle (°)	50	65	81
Maximum Inter-ramp Angle (°)	35	45	56
Maximum Overall Slope Angle (°)	-	40	50
Maximum Slope Height (m)	50	100	200

1.12 Mining Methods

A mine plan was developed by NCL. The plan is focused on a single mine area, mined through consecutive mining phases or pushbacks. The mill throughput assumption is based on an economic assessment study, resulting in an average throughput of 4.0 Mt per year of sulphide ore and a ramp-up period of 12 months that assumes a production rate of 3.2 Mt in the first year of production. Plan production (ramp-up) starts after commissioning during the second quarter of Year 1 to avoid the rainy season.

The required pre-stripping amounts to 13.2 Mt, and activities have been scheduled over 24 months. The mining schedule requires a maximum mine extraction of 20 Mt per year. The mine movement decreases from Year 10 until the mining operations are completed in Year 12. The production parameters for the Boa Esperança Project are summarised in Table 1-4.

Table 1-4: Key Production Parameters

Parameter	Quantity
Proven and Probable Mineral Reserves	43.1 Mt at 0.83 %Cu
LOM production	Copper: 717.9 M lb (Year 1 - Year 12)
Pre-stripping	13.2 Mt (24 months)
Maximum material movement	20 Mt/annum (without rehandling)
Mine life	12 years

The adopted mining operation strategy for this study corresponds to contract mining from pre-stripping through Year 5 of operation and transition to owner mining in Year 6 to the life of mine. The preferred timing of the transition to owner mining will be analyzed in future studies.

The mine is scheduled to work on a 7-days-a-week, three 8-hour shift basis, 365 days a year and 12 lost days per year due to weather conditions. The operation will include normal drilling, blasting, loading with 5.2 m³ / 3.9 m³ (waste/ore) backhoe configured excavator and 38 t conventional trucks over an 8-m bench height (double bench of 16 m in fresh rock in interim and final slopes). Mining will be performed on a sub-bench or flitch basis. All mining processes in the ore areas will apply processes commensurate with selective mining to mitigate ore dilution and losses. Mining will include supporting functions such as ancillary activities, dewatering, grade control, and equipment maintenance. Table 1-5 and Table 1-6 summarise the mine and plant feed production schedules.

Table 1-5: Mine Production Schedule (yearly)

Year	Total Mined Ore			Mineralised material to stockpile	Total to Waste Dump					Total Mined
	Mine to Mill	Mine to Stockpile	Total Ore		Fresh Waste	Topsoil	Saprolite	Weathered	Total Waste

1.13 Recovery Methods

The process plant is designed to treat a nominal 4 Mt/a ROM ore from an open pit mine operation to produce a copper concentrate. A sequential flotation process was selected for the project, which is based on the review of the previous processing and metallurgical tests and the circuit evaluation by Ausenco as described in Section 13.0 of the Report. The selected unit processes involve a conventional three-stage crushing and a ball milling comminution process, followed by sequential flotation stages of copper flotation and pyrite floatation circuits, as well as the dewatering circuits for both the final copper concentrate and pyrite tailings for dry stacking. The pyrite concentrate separated from the pyrite flotation will be impounded separately.

The process plant will operate on the basis of three 8-hour shifts per day, 365 days a year. The operational availability is set at 70% for crushing, 92% for grinding and flotation, as well as 84% in average for concentrate and tailings filtration.

A simplified process flowsheet is shown in Figure 1-1. The ROM ore will be hauled from the open pit mine to a surface crushing plant, where it will be crushed to a P80 of 12 mm via a three-stage crushing circuit. The crushed ore will be transferred to a stockpile prior to being ground in a ball mill which is in a closed circuit with classifying cyclones. The cyclone overflow with a desired P80 of 110 µm will gravitate to a copper flotation circuit.

The copper flotation circuit will consist of a conventional rougher flotation stage, a regrind circuit to further reduce the particle size of the combined rougher concentrate and cleaner scavenger concentrate to a P80 of 38 µm, and the subsequent cleaner flotation circuit. The cleaner flotation circuit will involve a cleaner scalper stage followed by two stages of cleaner flotation. The copper concentrate from the cleaner scalper and second cleaner stages will be the final product, which will be thickened in a high-rate thickener and then filtered in conventional vertical plate pressure filters for dewatering.

Tailings from the copper rougher flotation circuit will combine with tailings from the copper cleaner-scavenger flotation circuit as the feed for the pyrite flotation circuit. The pyrite concentrate will be stored in a dedicated pyrite impoundment. The final tailings from the pyrite flotation will be thickened and filtered to be stored at a dry stacking facility.

Figure 1-1: Overall Process Flowsheet

Note: Figure prepared by Ausenco, 2021.

1.14 Project Infrastructure

The proposed Boa Esperança mine is a greenfield site but is located in a region of reasonable infrastructure. On-site and off-site infrastructure that will be required for mining and processing operations will include:

- On-site
 - o Open pit mine
 - o Stockpiles and waste rock facilities
 - o Process plant with three-stage crushing
 - o Dry stacked tailings facility (“**DSTF**”)
 - o Wet or pyrite tailings storage facility (“**TSF**”)
 - o Water treatment plant (“**WTP**”)
 - o Water collection and containment structures
 - o Administration building and offices
 - o Laboratory
 - o Warehouse and yard storage
 - o Process operations workshop
 - o Truck shop
 - o Mine dry
 - o Truck wash
 - o Explosive storage magazine
 - o Gate house and weigh scale
 - o Core shed
 - o First aid clinic and fire protection building
 - o Canteen
 - o Sewage treatment
 - o Refuse storage
- Off-site
 - o Access road upgrade and public road bypass
 - o Power transmission line

1.14.1 Accessibility

1.14.1.1 Road

Access to the Project by road is from Ourilândia do Norte, which features commercial flights, and Tucumã. From Tucumã state highway PA-150 can be followed for approximately 25 km until reaching the intersection with P-3. From the intersection with P-3, a secondary road can be followed for approximately 20 km in a southwest direction to reach Morro Boa Esperança, where the Project is located.

Vila do Conde, Barcarena, PA, near the city of Belem is the only port complex from which seaborne loads can be transported to and from the site location. Loads can be transported via road. Copper concentrate loading and

transportation from the mine site to the Port of Vila do Conde will be performed via truck by a selected contractor.

1.14.1.2 Rail

The closest rail infrastructure to the Project is the Carajas railroad, which connects Sao Luis, Maranhao to Carajas, Pará. The railway covers approximately 892 km and is operated and 100% owned by Vale.

1.14.1.3 Air

The nearest commercial airstrip is in Ourilândia do Norte (CKS), located 12 km from the town of Tucuma, and approximately 45km by road to the Project.

1.14.2 Power

The public electricity supplier, Equatorial Energia Pará, supplies the region with electrical power. Equatorial Energia confirmed the feasibility of supplying power based on a peak demand load of 25 MW by means of a 138 kV power line between the main substation at the mine site and the existing nearby Tucumã substation. The power line will be approximately 45 km long and take 21 months to complete.

Equatorial Energia will oversee the power line route, design, construction and commissioning, landowners' approach, and land acquisition. Their battery limit will be the termination at the main mine site substation.

Power will be distributed from the main substation to area substations and e-houses as listed:

- Crushing area
- Grinding, Thickening, Flotation, Reagents and Water Distribution
- Tailings Filtering
- General Area Substation (Offices, Workshop, Canteen, First Aid Clinic, Laboratory, etc.)
- Wastewater Capture Substation
- Raw Water Intake

1.14.3 Accommodation

There will be no on-site camp provided. Instead, contractors and engineering, procurement and construction management (EPCM) staff will secure board and lodging in the nearby town of Tucumã and commute daily to the work site. Ourilândia do Norte, a municipality located approximately 10 km to the east of Tucumã, hosts much of the workforce for Vale's Onça Puma Nickel operations. Together, these two cities form a mining community with a population of more than 70,000 people offering skilled labor and sufficient board and lodging. During operations it is expected that personnel will be hired from local communities.

1.14.4 Waste Rock Facility

Waste rock from mining activities including pre-stripping, will be trucked to a designated waste rock dump. The dump will be built in 20-m lifts. Each lift will be constructed at an approximate angle of repose of 37°. A 10-m set-back between each lift will maintain the overall slope at 1.8:1 to facilitate reclamation and long-term stability. A constant 30% swell factor (after

natural compaction) was assumed in the design. The facility was designed to support 160 Mt, 8% additional capacity than the 148 Mt of waste of the mine plan. Once the deposit has been exhausted it is estimated the dump will cover an area of 185 ha.

A separate facility was designed to the south of the main waste rock facility (WRF) for the topsoil, to be used for later reclamation. The total estimated topsoil is 1.2 Mt for the life of mine.

1.14.5 Low-Grade Stockpile

Low-grade stockpiles will be created close to the process plant and to the east of the pit. The stockpiles are designed with 10-m lifts and 10-m setbacks to facilitate later re-handling.

1.14.6 Tailings Storage Facilities

The tailings produced from mineral extraction will be segregated in the pyrite flotation cells to form two tailings streams; pyrite tailings and non-pyrite tailings. The tailings streams are segregated to assist with managing the smaller amount of potentially acid-generating (“**PAG**”) material using a Best Management Practice approach.

The PAG slurry tailings will be discharged in a geomembrane-lined TSF located to the north of the primary crusher. Approximately 4.3 Mt of slurry tailings will be discharged sub-aqueously over the life of the project within the TSF. The TSF impoundment requires ring embankment that will be constructed in phases to contain the tailings.

The non-acid generating (NAG) tailings will be filtered to reclaim water at the plant for reuse and create a filter cake that can be placed in a DSTF. After filtering, the dewatered tailings will be transported to the DSTF in haul trucks and compacted in relatively thin lifts. Approximately 38.7 Mt of filtered tailings will be placed in the DSTF over the life of the project.

All non-contact water near these facilities will be diverted around and discharged into natural drainages. All contact water from these facilities will be collected and conveyed to contact water/seepage ponds.

1.14.7 Water Management

The water management plan is based largely on the water balance calculated in August – September 2021 and includes discussion of contact water as well as opportunities that may be actioned to improve the confidence in the estimates of contact water quantities as well as water quality. The water management plan requires the geochemical assessment of waste and tailings prior to finalization, and this work is underway.

A surface water management system will be constructed to segregate contact and non-contact water. Non-contact water will be diverted around mine infrastructure to natural drainage structures. Contact water will be diverted to ponds followed by treatment prior to release. The estimated contact water from mine infrastructure is presented in Table 1-7.

Table 1-7: Contact Water Estimate

All values in m³/h	Average Wet Season				Average Dry Season			
	Start-up	Y5	Ultimate	Closure	Start-up	Y5	Ultimate	Closure
Waste Rock Dump (runoff & seepage)	260	420	602	222	86	139	199	73
LG Stockpile and admin area	72	72	72	0	24	24	24	0
Pit (sump)	96	283	349	0	41	223	248	0
TSF (runoff)	51	58	73	73	17	19	24	24
Tailings (runoff)	154	306	306	107	51	101	101	35
Total contact water (m³/h)	634	1140	1402	402	218	505	595	133

The capital cost estimate for the Project includes use of a high-density sludge ("HDS") WTP to treat contact water. HDS is based on lime neutralization to induce precipitation of metals and salts via pH change. Seepage from the waste rock dump and other contact water is treated by adding lime, followed by coagulation/co-precipitation with ferric iron, flocculation, clarification, and pH adjustment (if required). Sludge from the WTP will be disposed in the TSF. Completion of the proposed geochemistry program may inform modifications in the treatment plant selection and sizing as currently envisioned.

1.14.8 Water Supply

Raw water at a maximum flowrate of 170 m³/h will be pumped from a reservoir created by installing a water dam at Jatobá creek.

1.14.9 Environmental and Social Considerations

As outlined in this FSU, the Project has been designed using Best Management Practice to protect the environment, surface waters, and groundwater in the area.

The raw water for the Project will be sourced from a reservoir dam constructed in the Jatobá river to stabilize water availability throughout the seasons. The water reservoir will have the purpose of storing clean water to meet the demand of the plant, estimated at a flow of 154 m³/h, working for a year without interruption. The water pond will restrict the flow of Jatobá river and will be constructed within the property owned by Ero Copper.

1.14.10 Closure and Reclamation Considerations

The primary objective of the closure and reclamation initiatives will be to eventually return the DSTF and TSF to self-sustaining facilities that satisfy the end land-use objectives. The DSTF and TSF are designed to maintain long-term physical and chemical stability, protect the downstream environment, and manage surface water. In addition, the closure plan needs to be compatible with a premature closure event. At the end of the mine life, the water cover over the tailings of the TSF will be drained and a capped will be constructed using non-acid generating material, topsoil and topsoil to limit ingress of oxygen and water to the PAG tailings.

The DSTF will utilize progressive closure measure to facilitate closure along with reducing erosion in area where exterior slopes are completed during the life of mine. Both the TSF and DSTF meet both operational and post-closure physical and geochemical and protect the downstream environment along with surface water management.

Closure and reclamation costs have been estimated by Ero at approximately US\$24 M, which is partially offset by an estimate salvage value of US\$7 M. Closure costs have been based upon detailed costing performed in 2017 for the Project's Plano de Recuperação de Áreas Degradadas (PRAD) and have been adjusted for scope and inflation using Ero's current reclamation activities and operations in Bahia, Brazil as a reference check for key input costs. Closure activities for the Project include:

- Retrenchment;
- Demolition of surface sites;
- De-mobilization of equipment;
- Open pit reclamation;
- DTSF recontouring and reclamation;
- Waste dump recontouring and reclamation; and,

- PAG reclamation.

1.14.11 Social Considerations

Ero and its subsidiaries have an extensive operating background in Brazil and a strong history of community engagement. Social programs will be developed for the Project that align with the Company's policies and vision to create value for all stakeholders. Programs that will be developed are expected to be similar to existing programs in place at Ero's operations in Bahia State and Mato Grosso State which focus on socio-economic development, effective communication, and job training to foster local employment, among others.

1.15 Markets and Contracts

The Boa Esperança Project copper concentrate is generally expected to be of high quality with low levels of deleterious elements. As such, combined with Ero's experience selling copper concentrate from its Curaçá Valley operations, Ero expects that the copper concentrate from the Boa Esperança Project will be in high demand from traders and smelters.

The metal price assumptions selected for the 2021 FSU are based on the analyst consensus copper price outlook:

- US\$3.80/lb in 2024, US\$3.95/lb in 2025, US\$3.40 in 2026+

Ero has assumed that the Boa Esperança Project concentrate will incur similar TC/RCs to that of its Curaçá Valley operations with forecast TCs of US\$21/t of concentrate and RCs of US\$0.021 (2.10 cents) per pound of copper (2021 benchmark). Presented prices are nominal.

Copper concentrate loading and transportation from the mine site to the Port of Vila do Conde will be performed by a selected contractor. Total transport costs for the concentrate are estimated at US\$146.9/wet metric tonne ("wmt").

1.16 Capital Cost Estimates

The capital cost estimate for the Project has an estimated accuracy of $\pm 15\%$ and uses third-quarter, 2021 US dollars as the base currency. The total estimated initial capital cost for the design, construction, installation, and commissioning of the Boa Esperança Project is estimated to be US\$294.2 million. A summary of the estimated capital cost is shown in Table 1-8.

Table 1-8: Capital Cost Estimate

Cost Type	Description	Pre-Production Capital (USD M) with Taxes
Direct	Open pit mine (including Truck Shop)	55.0
	Ore handling	22.8
	Processing plant	62.6
	Tailings (DSTF and TSF)/reclaim	14.6
	On-site infrastructure	42.4
	Off-site infrastructure	28.7
	Direct total	226.1
Indirect	Owner's costs	13.8
	Indirect costs	32.4
	Contingency	21.9
	Indirect total	68.1
	Total Pre-Production Capital	294.2

The total sustaining capital cost estimate is US\$196 million for the 12-year LOM which includes equipment, tailings and other items. Closure costs were estimated to be US\$24 million.

1.17 Operating Cost Estimates

The operating cost estimates use US dollars as the base currency and has an estimated accuracy of $\pm 15\%$. The average annual operating cost was estimated for the Boa Esperança Project based on the proposed mining schedule. These costs included mining, processing, maintenance, G&A and cost of operating the dry stacked tailings facility.

The average annual operating cost for the Boa Esperança Project is estimated to be US\$18.6/ t processed. The breakdown of costs in Table 1-9 is estimated based on a mill feed rate of 4 Mt/a.

Table 1-9: Forecast Average Annual Operating Cost Estimate Summary

Operating Cost	Annual Cost (US\$ M)	Annual Cost (US\$/t processed)
Mining	37.80	9.45
Processing	22.93	5.73
Plant Maintenance	5.68	1.42
G&A	6.08	1.52
Dry stack tailings (excludes workforce)	1.91	0.48
Total	74.2	18.6

All pre-production costs have been included in capital costs.

1.18 Economic Analysis

The results of the economic analyses discussed in this section represent forward-looking statements. The results depend on inputs that are subject to a number of known and unknown risks, uncertainties and other factors that may cause actual results to differ materially from those presented here. Statements that are forward-looking includes:

- Mineral Resource and Mineral Reserve estimates;
- Assumed commodity prices and exchange rates;
- The proposed mine production plan;
- Projected mining and process recovery rates;
- Sustaining costs and proposed operating costs;
- Assumptions as to closure costs and closure requirements; and
- Assumptions as to environmental, permitting and social risks.

Additional risks to the forward-looking statements include:

- Changes to costs of production from what are estimated;
- Unrecognized environmental risks;
- Unanticipated reclamation expenses;

- Unexpected variations in quantity of mineralized material, grade or recovery rates;
- Geotechnical or hydrogeological considerations during mining being different from what was assumed;
- Failure of mining methods to operate as anticipated;
- Failure of plant, equipment, or processes to operate as anticipated;
- Changes to assumptions as to the availability of electrical power, and the power rates used in the operating cost estimates and financial analysis;
- Ability to maintain the social licence to operate;
- Accidents, labour disputes and other risks of the mining industry;
- Changes to interest rates;
- Changes to tax rates.

The Project assumes that permits have to be obtained in support of operations, and approval for development to be provided by Ero Copper's Board.

An engineering economic model was developed to estimate annual pre-tax and post-tax cash flows and sensitivities of the Project based on an 8% discount rate. It must be noted, however, that tax estimates involve many complex variables that can only be accurately calculated during operations and, as such, the after-tax results are only approximations. Sensitivity analysis was performed to assess impact of variations in metal prices, head grades, operating costs and capital costs. The capital and operating cost estimates were developed specifically for this Project and are summarised in Section 21 of the Report (presented in 2021 US dollars). The economic analysis has been run with no inflation (constant dollar basis).

The economic analysis was performed using the following assumptions:

- Construction period of 2 years;
- Mine life of 12 years;
- Consensus copper price forecast based on the average analyst copper price estimate from 26 financial institutions as of the Effective Date, resulting in US\$3.80 per pound in 2024, US\$3.95 per pound in 2025, and US\$3.40 per pound in 2026 and thereafter. The forecasts used are meant to reflect the average metal price expectation over the life of the Project. No price inflation or escalation factors were taken into account. Commodity prices can be volatile, and there is the potential for deviation from the forecast;
- Brazilian real to United States Dollar exchange rate assumption of 5.00 (R\$/US\$)
- Cost estimates in constant Q3 2021 US\$ with no inflation or escalation factors considered;
- Results are based on 100% ownership with 2% *Compensação Financeira pela Exploração de Recursos Minerais* (CFEM) net smelter return (NSR);
- Capital costs funded with 100% equity (i.e. no financing costs assumed);
- All cash flows discounted to start of construction;
- All metal products are assumed sold in the same year they are produced;
- Project revenue is derived from the sale of copper concentrate into the international marketplace;

- No contractual arrangements for smelting or refining currently exist.

The economic analysis was performed using an 8% discount rate. The 8% pre-tax NPV is US\$464.6M, the IRR is 48.6%, and payback is 1.3 years. On an after-tax basis, the NPV 8% is US\$379.6M, the IRR is 41.8% and the payback is 1.4 years.

A summary of the Project economics is included in Table 1-10 and shown graphically in Figure 1-2. The cashflow on an annualized basis is provided in Table 22-2 in the Report.

Table 1-10: Summary, Projected LOM Cashflow Assumptions and Results

Units		Values
General Assumptions		
Copper Price	(US\$/lb)	US\$3.80/lb in 2024, US\$3.95/lb in 2025, US\$3.40 in 2026+

Figure 1-3: Projected LOM Post-Tax Cashflow

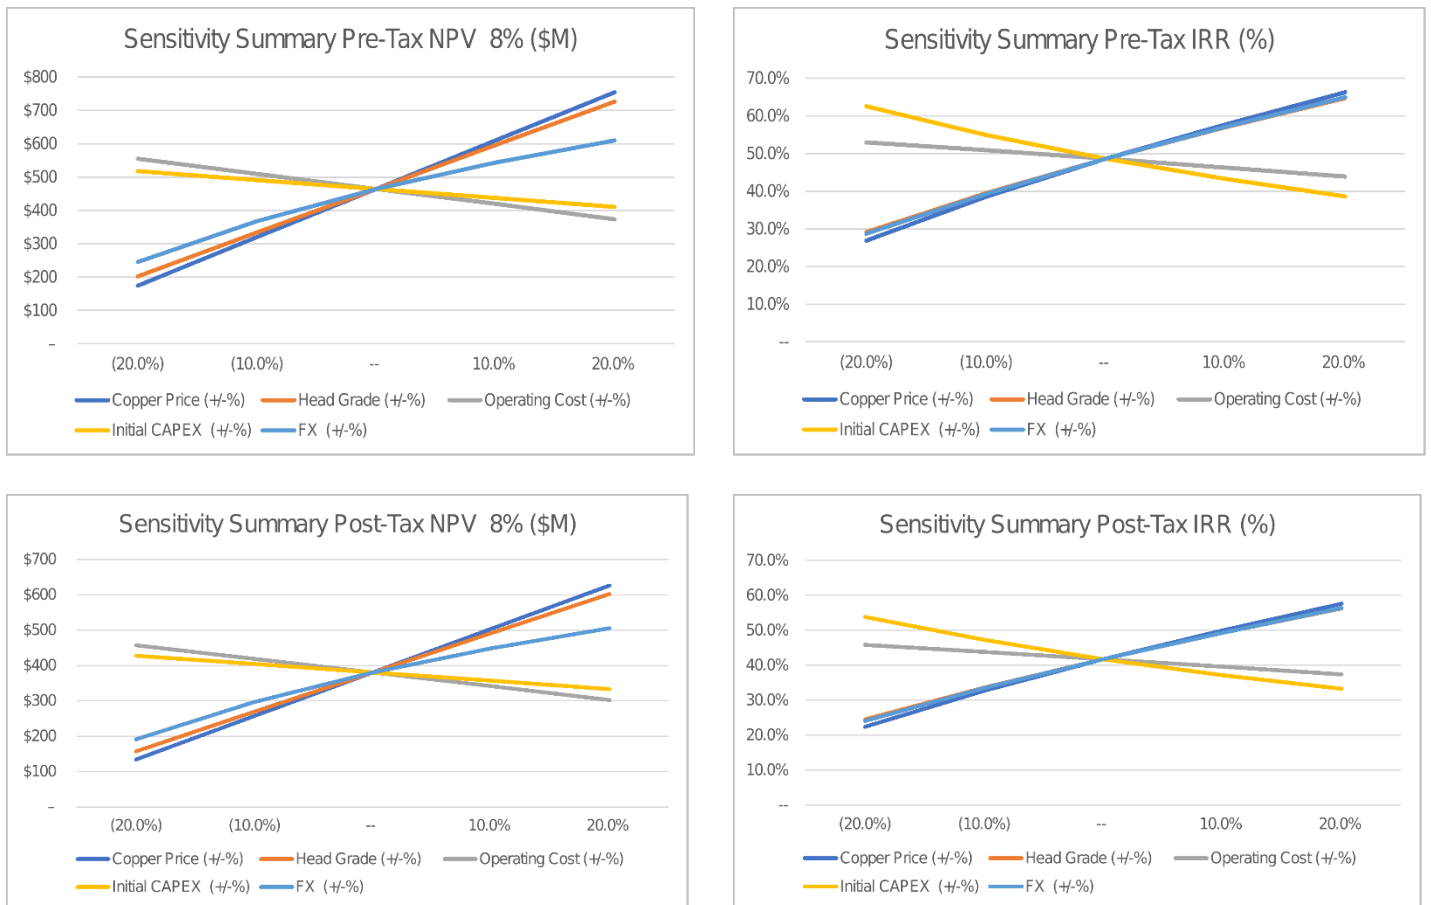

Note: Figure prepared by Ausenco, 2021

1.19 Sensitivity Analysis

A sensitivity analysis was conducted on the base case pre-tax and after-tax NPV and IRR of the Project, using the following variables: metal price, discount rate, exchange rate, capital costs, and operating costs. Figure 1-4 shows the pre-tax and post sensitivity analysis findings. Analysis revealed that the Project is most sensitive to changes in metal prices and head grade, than, to a lesser extent, the exchange rate, operating costs and capital costs.

Figure 1-4: NPV & IRR Sensitivity Results

1.20 Interpretation and Conclusions

The Boa Esperança deposit will be mined over 12 years with 2 years of pre-strip. The total LOM tonnage, including pre-strip, is 203 million tonnes, with an overall stripping ratio of 3.7:1. Ore will be processed by conventional methods to annually produce (LOM) over 27,000 tonnes of copper, with the first five years of production averaging approximately 35,000 tonnes per annum. Waste and tailings materials will be stored and placed in surface facilities, which will be closed and reclaimed at the end of the mine; contact water will be treated and discharged to the environment throughout the life of mine. Copper concentrates are expected to have trace-level deleterious elements.

No contractual arrangements for smelting or refining currently exist.

Under the assumptions presented in the Report, the Project shows positive economics.

The site is free and clear of any environmental liabilities and all required permits for construction activities are encompassed by the LI issued on August 30, 2021.

In terms of project execution, the mine requires nominally two years of pre-strip operations, two years of construction of processing and infrastructure facilities including TSF starter dam development, access road upgrade and water supply development before actual production mining operations can commence.

For pre-strip work to start, site tree and bush clearing will be required and achieved by accessing the site using the existing access road.

1.21 Recommendations

To support the next phase of the project, early works and future project execution, a program of work is recommended, which will include:

- Geotechnical investigations and refinement of pit, earthworks and foundation designs.
- Geochemistry investigations and studies in support of water management, water treatment, waste rock, TSF and DSTF designs.
- Update hydrogeological models and groundwater management plans in support of operational phases.
- Additional metallurgical test work to support detailed engineering and design parameters related to the process flow sheet.

The budget for this work is estimated to be US\$2 million.

Updated Information with respect to the Tucumã Operations

Subsequent to the issuance of the Tucumã Project Technical Report, the Company commenced construction of the Tucumã Project during the second quarter of 2022, with the project delivered on-time and without injury or environmental incident in 2024. In June 2024, the Company received the Operating License for the Tucumã Operations from SEMAS (*Secretaria de Estado de Meio Ambiente e Sustentabilidade*), the Pará State environmental agency, being the last remaining permitting milestone for commercial operations. Thereafter, the Tucumã Operations achieved first production of saleable copper concentrate in July 2024 and continues to ramp-up towards commercial production.

Set out below are updates to the Tucumã Project Technical Report, which have been prepared under the supervision of and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148), Resource Manager of the Company, who is a “qualified person” within the meanings of NI 43-101.

Ownership

As at the date of this AIF, the permitting status for the active operations of the Tucumã Operations is summarized in the following table:

Table 1-11: Summary of Primary Operational Permits

Mine/Project	License Scope	Project Phase	Permit Period		Status
			Start	Expiry	
LO 14850/51	Mine and Plant operation	Operation	May/02/2024	May/02/2027	Valid
LO 15263	Cu concentrate transport	Operation	Aug/11/2024	Aug/11/2029	Valid
LO 15173	Gas/Diesel Storage	Operation	Nov/03/2024	Nov/03/2029	Valid
OTG7198	Local Water Use	Operation	Oct/04/2024	Oct/04/2034	Valid
PL294	Mineral R&R Right	Operation	Feb/02/2022	LOM	Valid

Notes:

- ⁽²⁾ Permit remains valid until such time as renewal application is processed and new permit is issued by regulatory agency.

Power

The Tucumã Operations' power line was constructed and connected on January 26, 2024. Power to the Tucumã Operations is supplied by Equatorial Energy Group Company.

Water Management

The water management plan is based on the quantities of water currently handled on site after the construction of the main drainage structures. Contact water from the geotechnical structures (tailings, sulfide waste dump and LG Stockpile) is directed to the wetlands for treatment and elimination of geochemical risk. All the other areas that generate non-contact water are sent to sumps.

The estimated contact water from mine infrastructure is presented in Table 1-12.

Table 1-12: Contact Water Estimate

All values in m ³ /h	Average Wet Season				Average Dry Season			
	Start-up	Y5	Ultimate	Closure	Start-up	Y5	Ultimate	Closure
Waste Rock								
Dump (runoff & seepage)	20	220	250	92	62	202	208	76
LG Stockpile and admin area	38	38	38	0	13	13	13	0
Pit (sump)	0	283	349	0	41	223	248	0
TSF (runoff)	51	58	73	73	17	19	24	24
Tailings (runoff)	118	235	235	81	39	77	77	26
Total contact water (m³/h)	227	833	944	246	116	534	570	126

Wetlands are a complementary process to septic tank effluent (necessary for the breakdown of complex molecules into simpler molecules that are easily absorbed by plant roots) that are capable of using physical, chemical and biological filtration in the transformation/depuration of pollutants. This type of system has low operating, implementation and maintenance costs compared to conventional systems.

RISK FACTORS

An investment in the Company's securities is speculative and involves a high degree of risk due to the nature of the Company's business. The following risks, as well as risks currently unknown to the Company or that the Company currently deems immaterial, could materially and adversely affect the Company's current or future business, properties, operations, results, cash flows, financial condition and prospects; could cause future results, cash flows, financial condition, prospects, events or circumstances to differ materially from those currently expected, including the estimates and projections contained in this AIF; and, could cause actual events to differ materially from those described in forward-looking statements relating to the Company. Investors should carefully consider the risks described below and elsewhere in this AIF. The risks described below and elsewhere in this AIF do not purport to be an exhaustive summary of the risks affecting the Company and additional risks and uncertainties not currently known to the Company or not currently perceived as being material may have an adverse effect on the Company. The risks discussed below also include forward-looking statements, and our actual results may differ substantially from those discussed in these forward-looking statements. See "Cautionary Note Regarding Forward-Looking Statements."

Risks Related to the Company's Business

Copper and gold prices are volatile and may be lower than expected

The Company's business and its ability to sustain operations are dependent on, among other things, the market price of copper and gold. The prices of copper and gold realized by the Company will affect ongoing and future exploration, development and construction programs or decisions, production levels, earnings, cash flows, financial condition and prospects of the Company. If the world market prices of copper and/or gold were to drop and the prices realized by the Company on copper and/or gold sales were to decrease significantly and remain at such level for any substantial period, the Company's business, financial condition, results of operations, cash flows and prospects would be negatively affected. To help mitigate this risk, the Company has entered into zero-cost gold collar contracts on 2,500 ounces of gold per month from January 2025 to December 2025. These contracts set a floor price of US\$2,200 per ounce, while allowing for upside participation in gold price increases up to an average cap of US\$3,425 per ounce, over 20% above the all-time high price reached in October 2024. The total hedged volume is 30,000 ounces, representing just over 50% of projected 2025 gold production at the Xavantina Operations.

Some factors that affect the price of copper and gold include: industrial demand; forward or short sales of copper and gold by producers and speculators; future levels of copper and gold production; and rapid short-term changes in supply and demand due to speculative or hedging activities by producers, individuals or funds. Copper and gold prices are also affected by macroeconomic factors including: confidence in the global economy; interest rates and expectations of the future interest rates, expectations with respect to the rate of inflation or deflation; expectations with respect to new and/or retaliatory tariffs; global and regional supply and demand for industrial products containing metals generally; the availability and attractiveness of alternative investment vehicles; the strength of, and confidence in, the U.S. dollar, the currency in which the price of copper and gold is generally quoted, and other major currencies; global political or economic events (including, without limitation, global tariff disputes as well as the resumption, continuance or escalation of the conflict in the Middle East and/or the Russia-Ukraine conflict and the economic sanctions imposed thereon in connection therewith); global pandemics, such as COVID-19, and other health crises; and, costs of production of other copper and gold producing companies. All of the above factors can, through their interaction, affect the price of copper and gold by increasing or decreasing the demand for or supply of copper and gold.

The price of copper and gold has fluctuated widely in recent years, and future material price declines could cause commercial production from the Caraíba Operations, the Xavantina Operations and/or the Tucumã Operations to be less profitable than expected and could render such properties uneconomic. Continuing to conduct mining in a low copper and/or gold price environment would have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects. Depending on the current and expected price of copper and gold, projected cash flows from planned or current mining operations

may not be sufficient to warrant commencing or continuing mining, and the Company could be forced to discontinue exploration, development, construction or commercial production. The Company may be forced to sell one or more portions of the Caraíba Operations, Xavantina Operations or the Tucumã Operations to generate cash. Future production from the Caraíba Operations, Xavantina Operations and the Tucumã Operations will be dependent on a price of copper or gold, as the case may be, that is adequate to make a deposit economically viable. Furthermore, future mine plans using significantly lower copper or gold prices could result in material write-downs of the Company's investment in the Caraíba Operations, Xavantina Operations and the Tucumã Operations, as the case may be, and in reductions in Mineral Reserve and Mineral Resource estimates. The occurrence of any of the foregoing could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

A declining or sustained low price of copper could negatively impact the profitability of the Caraíba Operations or the Tucumã Operations, or a declining or sustained low price of gold could negatively impact the profitability of the Xavantina Operations, and could affect the Company's ability to finance the exploration and development of the properties currently owned or optioned by the Company as well as other properties in the future. In addition, a declining or sustained low price of copper could require a reassessment of the feasibility of the Deepening Extension Project at the Caraíba Operations. Although the price of copper is only one of several factors that the Company will consider in continuing with the construction, development and production decision on the Deepening Extension Project at the Caraíba Operations or the continued exploration of the Furnas Project, if the Company determines from a reassessment that the Deepening Extension Project at the Caraíba Operations or the Furnas Project is no longer economically viable in whole or in part, then operations or activities may cease or be curtailed and the Deepening Extension Project at the Caraíba Operations may never be fully constructed or developed or constructed or developed at all, and/or the Company may seek to terminate the Furnas Project Earn-in Agreement. The occurrence of any of the foregoing could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

Mining operations are risky

The Company's current business, and any future exploration, development or mining operations, involve various types of risks and hazards typical of companies engaged in the mining industry. Such risks include, but are not limited to: (i) industrial accidents; (ii) unusual or unexpected rock formations; (iii) structural cave-ins or slides and pitfall, ground or slope failures and accidental release of water from surface storage facilities; (iv) fire, flooding and earthquakes; (v) rock bursts; (vi) metal losses in handling and transport; (vii) periodic interruptions due to inclement or hazardous weather conditions; (viii) environmental hazards; (ix) discharge of pollutants or hazardous materials; (x) failure of retaining dams and tailings disposal areas; (xi) failure of processing and mechanical equipment and other performance problems; (xii) geotechnical risks, including the stability of the underground hanging walls and pillars and unusual and unexpected geological conditions; (xiii) unanticipated variations in grade and other geological problems, water, surface or underground conditions; (xiv) labour disputes or slowdowns; (xv) work force health issues as a result of working conditions or epidemics, pandemics or other health risks; and (xvi) force majeure events, or other unfavourable operating conditions.

These risks, conditions and events could result in: (i) personal injury or death; (ii) damage to, or destruction of, the value of the Caraíba Operations, the Xavantina Operations, the Tucumã Operations or their facilities; (iii) environmental damage to the Caraíba Operations, the Xavantina Operations, the Tucumã Operations, surrounding lands and waters, or the properties of others; (iv) temporary or permanent loss of personnel; (v) delays or prohibitions on mining or the transportation of minerals; (vi) monetary losses; and (vii) potential legal liability, and any of the foregoing could have a material adverse effect on the Company's business, financial condition, results of operation, cash flows or prospects. In particular, exploration, development, construction and mining activities present inherent risks of injury to people and damage to equipment. Significant accidents could potentially result in a complete shutdown of, or modifications to, the Company's operations at

the Caraíba Operations, the Xavantina Operations or the Tucumã Operations, as the case may be, and otherwise have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

There are also risks related to: (i) the reliance on, and the reliability of, current and new or developing technology; (ii) the reliance on the work performance of outside consultants, contractors, and manufacturers; (iii) changes to project parameters over which the Company does not have complete control such as the copper, gold and silver prices or labour or material costs; (iv) unknown or unanticipated or underestimated costs or expenses; (v) unknown or unanticipated or underestimated additions to the scope of work due to changing or adverse conditions encountered as a mine or project is developed or constructed; (vi) unexpected variances in the geometry or quality of ore zones; (vii) unexpected reclamation requirements or expenses; (viii) permitting time lines; (ix) unexpected or unknown ground conditions; (x) unexpected changes to estimated parameters utilized to estimate past timelines, projections, or costs; and (xi) liquidity risks. An adverse change in any one of such factors, hazards and risks may result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Mining operations require geologic, metallurgic, engineering, title, environmental, economic and financial assessments that may be materially incorrect and thus the Company may not produce as expected

The operations of mining properties or mining companies are based in large part on geologic, metallurgic, engineering, title, environmental, economic and financial assessments, which involve uncertainty. Such assessments may differ materially from actual results, which may result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects. These assessments include a series of assumptions regarding such factors as the ore body geometries, grades, recoverability, regulatory and environmental restrictions, future prices of metals and operating costs, future capital expenditures and royalties and government levies which will be imposed over the producing life of the Mineral Reserves. There are numerous uncertainties inherent in estimating quantities of Mineral Resources and Mineral Reserves and estimates in projecting potential future rates of mineral production, including factors subject to change and beyond the Company's control. Mineral Reserves and Mineral Resources estimates are based on limited samples and interpretations, which may not be representative of actual Mineral Reserves and Mineral Resources. In addition, title and rights of access to the Company's properties can never be guaranteed. Although select title and environmental reviews were conducted in connection with the Company's acquisition of shares of MCSA and NX Gold on December 12, 2016 (the "**Acquisitions**") and prior to entering into the Furnas Project Earn-in Agreement, this review cannot guarantee that any unforeseen defects in the chain of title will not arise to defeat the Company's title or rights to certain assets or that environmental defects, liabilities or deficiencies do not exist or are not greater than anticipated.

The Company's calculations of Mineral Resources and Mineral Reserves are estimates and depend upon geological interpretation and statistical inferences drawn from drilling and sampling analysis, which may prove to be inaccurate. Actual recoveries of copper and gold from mineralized material may be lower than those indicated by test work. Any material change in the quantity of mineralization, grade or stripping ratio, may affect the economic viability of Ero's properties. In addition, there can be no assurance that metal recoveries in small-scale laboratory tests will be duplicated in larger scale tests under on-site conditions or during production. Notwithstanding pilot plant tests for metallurgical recovery and other factors, there remains the possibility that the mineralized material may not perform in commercial production in the same manner as it did in testing. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. Mining and metallurgy are inexact sciences and, accordingly, there always remains an element of risk that a mine may not prove to be commercially viable.

Until a deposit is actually mined and processed, the quantity of Mineral Resources and Mineral Reserves and grades must be considered as estimates only. In addition, the quantity of Mineral Resources and Mineral Reserves may vary depending on, amongst other things, metal prices, cut-off grades and operating costs. Any material change in quantity of Mineral Reserves, Mineral Resources, grade, percent extraction of those Mineral Reserves recoverable by underground and open pit mining techniques may affect the economic viability of Ero's mining projects and could have a material adverse effect on its future

revenues, cash flows, profitability, results of operations, financial condition and prospects and result in write-downs of the Company's investment in mining properties and increased amortization charges.

Inferred Mineral Resources are also considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Mineral Reserves. Due to the uncertainty which may attach to Inferred Mineral Resources, there is no assurance that Inferred Mineral Resources will be upgraded to Proven Mineral Reserves or Probable Mineral Reserves as a result of continued exploration or as a result of economic considerations being applied to them.

In addition, market fluctuations in the price of copper, gold and silver, as well as increased production costs, reduced recovery rates or increased operating and capital costs due to inflation or other factors, may render the exploitation of certain Mineral Reserves and Mineral Resources uneconomic and may ultimately result in a restatement of Mineral Reserves, Mineral Resources or both. Such a restatement could affect depreciation and amortization rates and have an adverse effect on the Company's financial performance.

Geotechnical, hydrological and climatic events could suspend mining operations or increase costs

All mining operations face geotechnical, hydrological and climate challenges. Unanticipated adverse geotechnical and hydrological conditions, such as landslides, subsidence and uplift, embankment failures and rock fragility may occur in the future and such events may not be detected in advance. Geotechnical instabilities and adverse climatic conditions can be difficult to predict and are often affected by risks and hazards outside of the Company's control, such as severe weather and seismic activity.

Geotechnical failures could result in limited or restricted access to mines, suspension of operations, environmental damage, government investigations, increased monitoring costs, remediation costs, loss of ore and other impacts, which could result in loss of revenue or increased costs, and could result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

Actual production, capital and operating costs may be different than those anticipated

Ero prepares estimates of future productions, capital costs and operating costs of production for operations at the Caraíba Operations, the Xavantina Operations, and the Tucumã Operations. Such guidance is based upon a number of assumptions and estimates, including but not limited to, Mineral Reserve estimates, grade and continuity of interpreted geological formations and metallurgical performance, that, although presented with numerical specificity, are inherently subject to business, economic and competitive uncertainties and contingencies, many of which are beyond the Company's control and are based upon specific assumptions with respect to future business decisions, some of which will change. Guidance is necessarily speculative in nature, and it can be expected that some or all of the assumptions underlying the guidance furnished by the Company's will not materialize or will vary significantly from actual results. Accordingly, the Company's guidance is only an estimate of what management believes is realizable as of the date of this AIF. Any failure to successfully implement the Company's operating strategy or the occurrence of any of the risks or uncertainties set forth in this AIF, could result in actual results being different than the guidance, and such differences may be adverse and material.

In addition, as a result of the substantial expenditures involved in the development and construction of a mineral project such as the Deepening Extension Project at the Caraíba Operations, the need to project years into the future, the need to make assumptions and use models that may not adequately approximate reality, and the fluctuation of costs over time, a development project is prone to material cost overruns.

The Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Operations Technical Report estimate capital costs and cash operating costs based upon, among other things:

- anticipated tonnage, grades and metallurgical characteristics of the ore to be mined and processed;
- anticipated recovery rates of copper, gold and other metals from the ore;
- cash operating costs of comparable facilities and equipment;
- anticipated availability of labour and equipment; and
- anticipated foreign exchange rates.

Capital costs, operating costs, production and economic returns, and other estimates may differ significantly from those anticipated by the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Operations Technical Report, and there can be no assurance that the Company's actual capital or operating costs will not be higher than currently anticipated or that returns will not be lower than anticipated. The Company's actual costs may vary from estimates for a variety of reasons including, without limitation: limitations inherent in modelling; changes to assumed third party costs; short term operating factors; operational decisions made by the Company; revisions to mine plans; risks and hazards associated with exploration, development, construction and mining described elsewhere in this AIF; natural phenomena, such as inclement weather conditions, water availability, floods, and earthquakes; and unexpected supply chain distributions, labour shortages or strikes. Operating costs may also be affected by a variety of factors including, without limitation: changing strip ratios, ore metallurgical grade-recovery curves, the availability of processing operations, the availability of storage capacity, the availability of supplies, equipment and facilities necessary to continue operations at the Caraíba Operations, the Xavantina Operations, or the Tucumã Operations, the cost and availability of consumables and mining and processing equipment, labour costs, the availability and productivity of skilled labour, the cost of commodities, general inflationary pressures, currency exchange rates, technological and engineering problems, accidents or acts of sabotage or terrorism, the regulation of the mining industry by various levels of government and quasi-governmental organizations, global pandemics, and political and geopolitical factors such as global tariff disputes as well as the resumption, continuance or escalation of the conflict in the Middle East and/or the Russia-Ukraine conflict. Many of these factors are beyond the Company's control. Failure to achieve estimates or material increases in costs could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

Furthermore, unforeseen delays in the construction and commissioning of mining projects, including at the Tucumã Operations, or other technical difficulties may result in even further capital expenditures being required. Any delay in the development or construction of a project or cost overruns or operational difficulties with regards to the Caraíba Operations, the Xavantina Operations or the Tucumã Operations may have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

The Company's financial performance and results of operations are currently dependent on the Caraíba Operations and successful ramp up of the Tucumã Operation

For the year ended December 31, 2024, approximately 66% of the Company's revenues were generated by the Caraíba Operations. In July 2024, Ero produced the first saleable copper concentrate at its Tucumã Operation and initiated operational ramp-up. The company will continue to be dependent on the Caraíba Operations for a substantial portion of its revenue and cash flow until the Tucumã Operation reaches commercial production, expected during 2025. Any adverse condition affecting mining activities at the Caraíba Operations or a delay in the commissioning of the Tucumã Operations could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows and prospects.

Infectious diseases may affect the Company's business and operations

The continued presence of infectious diseases, such as COVID-19, emerging infectious diseases or the threat of widespread outbreaks, pandemics or epidemics of viruses or other contagions or diseases, could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects by causing operational and supply chain delays and disruptions (including as a result of governmental regulations and prevention measures), labour shortages and shutdowns, social unrest, breach of material contracts and customer agreements, governmental or regulatory actions or inactions, increased insurance premiums, decreased demand for or the inability to sell and delivery the Company's products,

declines in the price of copper, gold and other metals, delays in permitting or approvals, stock market volatility (including volatility in the trading price of the Company's securities, including the Common Shares), capital markets volatility, interest rate volatility, exchange rate volatility, or other unknown but potentially significant impacts. In addition, governments may reinstate or impose strict emergency measures in response to the threat or existence of an infectious disease.

Changes in climate conditions may affect the Company's operations

The Company recognizes that climate change is a global challenge that may have both favourable and adverse effects on its business in a range of possible ways. Mining and processing operations are energy intensive and result in a carbon footprint. As such, the Company is impacted by current and emerging policy and regulations relating to greenhouse gas emission levels, energy efficiency, and reporting of climate-change related risks. While some of the costs associated with reducing emissions may be offset by increased energy efficiency, technological innovation, or the increased demand for copper as part of technological innovations, the current regulatory trend may result in additional transition costs at some of the Company's operations.

A number of governments have introduced or are moving to introduce climate change legislation and treaties at the international, national, state/provincial and local levels. Regulation relating to emission levels (such as carbon taxes) and energy efficiency is becoming more stringent. If the current regulatory trend continues, this may result in increased costs at the Company's operations. Concerns around climate change may also affect the market price of the Company's securities, including the Common Shares, as institutional investors and others may divest interests in industries that are thought to have more environmental impacts. While Ero is committed to operating responsibly and reducing the impact of its operations on the environment, its ability to reduce emissions, energy and water usage by increasing efficiency and by adopting new innovation is constrained by technological advancement, operational factors and economics. Adoption of new technologies, the use of renewable energy, and infrastructure and operational changes necessary to reduce water usage may also increase operating costs significantly. Concerns over climate change, and the Company's ability to respond to regulatory requirements and societal pressures, may have significant impacts on the Company's operations and reputation, and may even result in reduced demand for its products.

In addition, the physical risks of climate change may also have an adverse effect on the Company's operations. These risks include, among others, the following:

- changes in sea levels could affect ocean transportation and shipping facilities that are used to transport supplies, equipment and workforce, and products from the Company's operations to world markets;
- extreme weather events (such as extreme winds or prolonged drought or rainy seasons) have the potential to disrupt operations at the Company's mines and may require the Company to make additional expenditures to mitigate the impact of such events; and
- the Company's facilities depend on regular supplies of consumables (diesel, tires, reagents, etc.) to operate efficiently. In the event that the effects of climate change or extreme weather events cause prolonged disruption to the delivery of essential commodities, production levels at the Company's operations may be reduced.

There can be no assurance that the Company will be able to anticipate, respond to, manage or effectively mitigate the risks associated with physical climate change events or impacts, and this may have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Currency fluctuations can result in unanticipated losses

Currency fluctuations may affect the Company's capital costs and the costs that the Company incurs at its operations. Copper and gold are sold throughout the world based principally on a U.S. dollar price, but a portion of the Company's operating and capital expenses are incurred in Brazilian Reals and Canadian dollars. The appreciation of foreign currencies, particularly the Brazilian Real against the U.S. dollar would increase the costs of copper and gold production at such mining operations, which could materially and adversely affect the Company's earnings and financial condition. The Company may

use derivatives, including forward contracts, collars and swap contracts, to manage this risk. However, there is no assurance that such derivatives or any other steps taken to help mitigate foreign currency fluctuations will be effective.

The successful operation of the Caraíba Operations, the Xavantina Operations and the Tucumã Operations depends on the skills of the Company's management and teams

The Company's business is dependent on retaining the services of its key management personnel with a variety of skills and experience, including in relation to the exploration, development, construction and operation of mineral projects and mines. The Company's success is, and will continue to be, dependent to a significant extent on the expertise and experience of its directors and senior management. Failure to retain, or loss of, one or more of these people could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects. The Company's success will also depend to a significant degree upon the contributions of qualified technical personnel and the Company's ability to attract and retain highly skilled personnel. Competition for such personnel is intense, and the Company may not be successful in attracting and retaining qualified personnel, or in obtaining the necessary work permits to hire qualified expatriates. The Company's inability to attract and retain these people could have a material adverse effect on its business, financial condition, results of operations, cash flows or prospects.

Operations during mining cycle peaks are higher cost

During times of increased demand for metals and minerals, price increases may encourage expanded mining exploration, development and construction activities. These increased activities may result in escalating demand for and cost of contract exploration, development and construction services and equipment. Increased demand for and cost of services and equipment could cause exploration, development and construction costs to increase materially, resulting in delays if services or equipment cannot be obtained in a timely manner due to inadequate availability, and increased potential for scheduling difficulties and cost increases due to the need to coordinate the availability of services or equipment, any of which could materially increase project exploration, development or construction costs, result in project delays, or increase operating costs.

Title to the Caraíba Operations, the Xavantina Operations and/or the Tucumã Operations may be disputed

Although the Company has received title opinions for the Caraíba Operations, the Xavantina Operations and the Tucumã Operations there is no guarantee that title to such properties will not be challenged or impugned. The Company's claims may be subject to prior unregistered agreements or transfers and title may be affected by unidentified or unknown defects. The Company has conducted an investigation on the title of properties that it has acquired to confirm that there are no known claims or agreements that could affect its title to its mineral tenure or surface rights. There is no guarantee that such title will not be challenged or impaired. If title to the Company's properties is disputed, it may result in the Company paying substantial costs to settle the dispute or clear title and could result in the loss of the property, which events may affect the economic viability of the Company. Title insurance generally is not available for mineral tenure or surface rights and the Company's ability to ensure that it has obtained secure claim to title may be constrained.

The Company may fail to comply with the law or may fail to obtain or renew necessary permits and licenses

The Company's operations are subject to extensive laws and regulations governing, among other things, such matters as environmental protection, management and use toxic substances and explosives; health, exploration, development and construction of mines; water quality standards; control and treatment of any discharge of potentially harmful effluents, including solutions that may contain sulphide, cyanide, heavy metals, reagents and other industrial chemicals; commercial production and sale of by-products; ongoing and post-closure reclamation; construction and operation of tailings dams; safety and labour; taxation and royalties; maintenance of mineral tenure; and, expropriation of property. The activities of the

Company require licenses and permits from various governmental authorities. Legal and regulatory requirements to obtain, maintain, and remain in compliance with such licenses and permits may change from time to time.

The costs associated with compliance with these laws and regulations and of obtaining licenses and permits are substantial, and possible future laws and regulations, changes to existing laws and regulations and more stringent enforcement of current laws and regulations by governmental authorities, could cause additional

expenses, capital expenditures, restrictions on or suspensions of the Company's operations and delays in the development or construction of its properties. There is no assurance that future changes in such laws and regulations, if any, will not adversely affect the Company's operations. Moreover, these laws and regulations may allow governmental authorities and private parties to bring lawsuits based upon damages to property and injury to persons resulting from the environmental, health and safety practices of the Company's past and current operations, or possibly even the actions of former property owners, and could lead to the imposition of substantial fines, penalties or other civil or criminal sanctions. The Company may fail to comply with current or future laws and regulations. Such non-compliance can lead to financial restatements, civil or criminal fines, penalties, and other material negative impacts on the Company.

The Company is required to obtain or renew further government permits and licenses for its current and contemplated operations. Obtaining, amending or renewing the necessary government permits and licenses can be a time-consuming process potentially involving numerous regulatory agencies, involving public hearings and costly undertakings on the Company's part. The duration and success of the Company's efforts to obtain, amend and renew permits and licenses are contingent upon many variables not within its control, including the interpretation of applicable requirements implemented by the relevant permitting or licensing authority and staffing shortages at such permitting and licensing authorities. The Company may not be able to obtain, amend or renew permits or licenses that are necessary to its operations, or the cost to obtain, amend or renew permits or licenses may exceed what the Company believes it can ultimately recover from a given property once in production. Any unexpected delays or costs associated with the permitting and licensing process could impede the ongoing exploration, development and operation of the Caraíba Operations, the Xavantina Operations and the Tucumã Operations and/or exploration of the Furnas Project. To the extent necessary permits or licenses are not obtained, amended or renewed, or are subsequently suspended or revoked, the Company may be curtailed or prohibited from proceeding with planned construction, development, commercialization, operation and exploration activities. Such curtailment or prohibition may result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

The failure of a tailings dam could negatively impact the Company's business, reputation and results of operations

Mining companies face inherent risks in their operations of tailings dams – structures built for the containment of the mining waste, known as tailings— that exposes Ero to certain risks. The Company's tailings dams include, in some cases, materials that could increase the hazard potential in the event of unexpected failure. If any such risks were to occur, this could materially adversely affect the Company's reputation and ability to conduct its operations and could expose the Company to liability and, as a result, have a material adverse effect on its business, financial position and results of operations.

In addition, the changes in regulation that may occur as a result of recent dam failures at other operations, like those that have occurred in Brazil, could increase the time and costs to build, operate, inspect, maintain and decommission tailings dams, obtain new licenses or renew existing licenses to build or expand tailings dams, or require the use of new technologies. New regulations enacted in Brazil during 2020 may also impose more restrictive requirements that may exceed the Company's current standards, including mandated compliance with emergency plans and increased insurance requirements, or require the Company's subsidiaries to pay additional fees or royalties to operate tailings dams. The Company may also be required to provide for and facilitate the relocation of communities and facilities that may be located downstream of the tailings dams or impacted by tailings dam failures.

Compliance with environmental regulations can be costly

The Company's mining operations at the Caraíba Operations, the Xavantina Operations and the Tucumã Operations, and the exploration of these properties as well as the Furnas Project are all subject to environmental regulation. Regulations cover,

among other things, water quality standards; control and treatment of any discharge of potentially harmful effluents, including solutions that may contain sulphide, cyanide, heavy metals, reagents and other industrial chemicals; land reclamation; the generation, transportation, storage and disposal of

hazardous waste; the construction and operation of tailings dams; and, general health and safety matters. There is no assurance that the Company has been or will at all times be in full compliance with all environmental laws and regulations or hold, and be in full compliance with, all required environmental and health and safety approvals and permits. The potential costs and delays associated with compliance with such laws, regulations, approvals and permits could prevent the Company from economically operating or proceeding with the further development and exploration of the Caraíba Operations, the Xavantina Operations, the Tucumã Operations and/or the Furnas Project, and any non-compliance with such laws, regulations, approvals and permits at the Caraíba Operations, the Xavantina Operations, the Tucumã Operations and/or the Furnas Project could result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Environmental approvals and permits are currently, and may in the future be, required in connection with the Company's current and planned operations. To the extent such environmental approvals and permits are required and not obtained, the Company's plans and the operation of mines may be curtailed, or it may be prohibited from proceeding with planned exploration or development of additional mineral properties. Failure to comply with applicable environmental laws, regulations and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions.

There is no assurance that any future changes in environmental regulation will not adversely affect the Company's operations. Changes in government regulations have the potential to significantly increase compliance costs and thus reduce the profitability of current or future operations.

Environmental hazards may also exist on the properties on which the Company holds interests that are unknown to the Company at present and that have been caused by previous or existing owners or operators of the properties and for which the Company may be liable for remediation. Parties engaged in mining operations, including the Company, may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable environmental laws or regulations, regardless of whether the Company actually caused the loss or damage. The costs of such compensation, fines or penalties could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Social and environmental activism can negatively impact exploration, development, construction and mining activities

There is an increasing level of public concern relating to the effects of mining on the natural landscape, on communities and on the environment. Certain non-governmental organizations, public interest groups and reporting organizations ("NGOs") who oppose resource development can be vocal critics of the mining industry. In addition, there have been many instances in which local community groups have opposed resource extraction activities, which have resulted in disruption and delays to the relevant operation. While the Company seeks to operate in a socially responsible manner and believes it has good relationships with local communities in the regions in which it operates, NGOs or local community organizations could direct adverse publicity against and/or disrupt the operations of the Company in respect of one or more of its properties, regardless of its successful compliance with social and environmental best practices, due to political factors, activities of unrelated third parties on lands in which the Company has an interest or the Company's operations specifically. Any such actions and the resulting media coverage could have an adverse effect on the reputation and financial condition of the Company or its relationships with the communities in which it operates, which could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

The construction and start-up of new mines and projects at existing mines is subject to a number of factors and the Company may not be able to successfully complete new construction projects

The success of construction projects and the start-up of new mines by the Company, including the Tucuma Operations, is subject to a number of factors including the availability and performance of engineering and construction contractors, mining contractors, suppliers and consultants, the receipt of required governmental approvals and permits in connection with the resettlement and use of land of local communities impacted by the planned operations, construction of mining facilities and the conduct of mining operations (including environmental and regulatory permits), the commissioning of key equipment such as mills and filter, the successful completion and operation of mining stopes, ventilation systems, shafts, processing plants and conveyors to move ore, among other operational elements. Any delay in the performance of any one or more of the contractors, suppliers, consultants or other persons on which the Company is dependent in connection with its construction activities, a delay in or failure to receive the required governmental approvals and permits in a timely manner or on reasonable terms, or a delay in or failure in connection with the completion and successful operation of the operational elements in connection with construction projects and/or new mines could delay or prevent the construction and start-up of new mines or projects at existing mines as planned. There can be no assurance that current or future construction and start-up plans implemented by the Company will be successful, that the Company will be able to obtain sufficient funds to finance construction and start-up activities, that personnel and equipment will be available in a timely manner or on reasonable terms to successfully complete construction projects, that the Company will be able to obtain all necessary governmental approvals and permits or that the completion of the construction, the start-up costs and the ongoing operating costs associated with the development of new mines or projects at existing mines will not be significantly higher than anticipated by the Company. Any of the foregoing factors could adversely impact the Company's business, financial condition, results of operations, cash flows and prospects.

The capital expenditures and time required to develop new mines or other projects are considerable and changes in costs or construction schedules can affect project economics. Thus, it is possible that actual costs may change significantly, and economic returns may differ materially from the Company's estimates.

The commercial viability of a new mine or development project is predicated on many factors. Mineral Reserves and Mineral Resources projected by feasibility studies and technical assessments performed on the Company's projects may not be realized, and the level of future metal prices needed to ensure commercial viability may not materialize. Consequently, there is a risk that start-up of new mine and development projects may be subject to write-down and/or closure as they may not be commercially viable.

Any uncertainty and inability in the estimation, recalculation or replacement of Mineral Reserves and Mineral Resources could materially affect the Company's results of operations, cash flows and financial position.

To ensure the continued operation of the business and realize the Company's growth strategy, it is essential that the Company continues to realize its existing identified Mineral Reserves, convert Mineral Resources into Mineral Reserves, increase the Company's Mineral Resource base by adding new Mineral Resources from areas of identified mineralized potential and otherwise successfully undertaking exploration, and/or acquire new Mineral Reserves and Mineral Resources. The life of mine estimates included herein may not be correct.

Land reclamation and mine closure requirements may be burdensome and costly

Land reclamation and mine closure requirements are generally imposed on mining companies, which may require the Company, among other things, to minimize the effects of land disturbance. Such requirements may include control and

treatment of any discharge of potentially harmful effluents, including solutions that may contain sulphide, cyanide, heavy metals, reagents and other industrial chemicals, from the site and restoring the site's landscape to its pre-disturbance form. The actual costs of reclamation and mine closure are uncertain and planned expenditures as outlined in the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report may differ materially from the actual expenditures required. Therefore, the amount that the Company will be required to spend could be materially higher than

currently estimated. Any additional amount required to be spent on reclamation and mine closure may have a material adverse effect on the Company's financial performance, financial position and results of operations and may cause the Company to alter its operations. Although liabilities for estimated reclamation and mine closure costs have been included in the Company's financial statements, it may be necessary to spend higher amounts than have been estimated in the financial statements to fund all required reclamation and mine closure activities.

The mining industry is intensely competitive

The mining industry is intensely competitive. The Company competes with other mining companies, many of which have greater resources and experience. Competition in the mining industry is primarily for: (i) properties which can be developed and can produce economically; (ii) the technical expertise to find, develop, and operate such properties; (iii) labour to operate such properties; and (iv) capital to fund such properties. Such competition may result in the Company being unable to acquire desired properties, to recruit or retain qualified employees and consultants or to acquire the capital necessary to fund its operations and develop its properties. The Company's inability to compete with other mining companies for these resources could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Many competitors not only explore for and mine minerals but conduct refining and marketing operations on a worldwide basis. In the future, the Company may also compete with such mining companies in refining and marketing its products to international markets. Any inability to compete with established competitors could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Inadequate infrastructure may constrain mining operations

Continued production at the Caraíba Operations and the Xavantina Operations and the successful ramp-up of production at the Tucumã Operations, each depend on adequate infrastructure. In particular, reliable power sources, water supply, ventilation systems, transportation and surface facilities are all necessary to develop and operate mines. Failure to adequately meet these infrastructure requirements or changes in the cost of such requirements could affect the Company's ability to continue production at the Caraíba Operations and the Xavantina Operations and to successfully ramp-up production at the Tucumã Operations and could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Operating cash flow may be insufficient for future needs

The exploration, development, construction and operation of the Company's mineral properties will require the commitment of substantial financial resources that may not be available. The amount and timing of expenditures will depend on a number of factors, including the progress of ongoing exploration, development and construction activities, success of the Company's ongoing operations, the results of consultants' analyses and recommendations, the rate at which operating losses are incurred, the execution of any joint venture agreements with strategic partners and the acquisition of additional property interests, some of which are beyond the Company's control. The Company's business strategies may not be successful, and it may not be profitable in any future period.

To the extent that the Company has negative operating cash flow in future periods, the Company may need to allocate a portion of its cash reserves to fund such negative operating cash flow. The Company may also be required to raise additional

funds through the issuance of equity or debt securities. There can be no assurance that additional capital or other types of financing will be available when needed or that these financings will be on terms favourable to the Company.

Fluctuations in the market prices and availability of commodities and equipment affect the Company's business

The cash flows and profitability of the Company's business will also be affected by the market prices and availability of commodities and equipment that are consumed or otherwise used in connection with the Company's operations and development and construction projects. Prices of such commodities and resources are also subject to volatility, which can be material and can occur over short periods of time due to factors beyond the Company's control including, without limitation, global tariff disputes as well as the resumption, continuance or escalation of the conflict in the Middle East and/or the Russia-Ukraine conflict and the economic sanctions imposed thereon in connection therewith, which have and may continue to result in increased prices for a variety of commodities and which could have other long-term effects on the global economy in addition to the near-term effects in the Middle East and/or on Ukraine and Russia.

If there is a significant and sustained increase in the cost of certain commodities, the Company may decide that it is not economically feasible to continue certain or all of the Company's commercial production, development, construction and exploration activities and this could have an adverse effect on profitability. Higher worldwide demand for critical resources like input commodities, drilling equipment, mobile mining equipment, tires and skilled labour could affect the Company's ability to acquire them and lead to delays in delivery and unanticipated cost increases, which could have an effect on the Company's operating costs, capital expenditures and production schedules. The occurrences of one or more of these events may result in a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

The Company is subject to restrictive covenants that limit its ability to operate its business

The Company and its subsidiaries are subject to certain affirmative and restrictive covenants contained in the 2023 Senior Credit Facility Agreement, the NX Gold Stream Agreement, the Non-Priced Copper Prepayment Facility Agreement and the Note Indenture. These agreements contain operating and financial covenants that could restrict the Company's and its subsidiaries' ability to, among other things:

- incur additional indebtedness;
- pay dividends or make other distributions or repurchase or redeem its capital stock;
- prepay, redeem or repurchase certain debt;
- make loans and investments;
- sell, transfer or otherwise dispose of assets;
- incur or permit to exist certain liens;
- enter into transactions with affiliates;
- enter into agreements restricting its subsidiaries' ability to pay dividends; and
- consolidate, amalgamate, merge or sell all or substantially all of its assets.

In addition, the restrictive covenants in the 2023 Senior Credit Facility Agreement, the Note Indenture, the Non-Priced Copper Prepayment Facility Agreement and the NX Gold Stream Agreement require the Company and its subsidiaries to maintain specified financial ratios and satisfy other financial condition tests. Compliance with the covenants and financial ratios may impair the Company and its subsidiaries and thereby the Company's ability to finance future operations or capital needs or to take advantage of other favourable corporate opportunities. The restrictions on the Company's ability to manage its business in management's sole discretion could adversely affect the Company's business by, among other things, limiting its ability to take advantage of business opportunities that management believes would be beneficial to shareholders and limiting their ability to adjust to changing market conditions. The Company's and its subsidiaries' ability to comply with such covenants

and financial ratios will depend on future performance and may be affected by events beyond the control of the Company and its subsidiaries, including economic, financial and industry conditions.

A breach of the covenants under the 2023 Senior Credit Facility Agreement, the Note Indenture, the Non-Priced Copper Prepayment Facility Agreement or the Company's and its subsidiaries' other debt instruments from time to time could result in an event of default under the applicable indebtedness. Such a default may allow the creditors to accelerate the related debt and may result in the acceleration of any other debt to which a cross-acceleration or cross-default provision applies. In addition, an event of default under the 2023 Senior Credit Facility Agreement or the Non-Priced Copper Prepayment Facility Agreement would permit the lenders thereunder to terminate all commitments to extend further credit under that facility. Furthermore, if the Company were unable to repay any amounts due and payable under the 2023 Senior Credit Facility or the Non-Priced Copper Prepayment Facility Agreement, those lenders could proceed against the collateral granted to them to secure such indebtedness. In the event the Company and its subsidiaries' lenders or noteholders accelerate the repayment of the Company's and its subsidiaries' borrowings, the Company may not have sufficient assets to repay that indebtedness. As a result of these restrictions, the Company and its subsidiaries may be:

- limited in how they conduct business;
- unable to raise additional debt or equity financing to operate during general economic or business downturns; or
- unable to compete effectively or to take advantage of new business opportunities.

These restrictions may affect the Company and its subsidiaries' ability to grow in accordance with the Company's and its subsidiaries' strategy.

The Company's indebtedness could adversely affect its financial condition and prevent the Company from fulfilling its obligations under debt instruments

The Company has a significant amount of indebtedness, which includes the Notes, the 2023 Senior Credit Facility and the Non-Priced Copper Prepayment Facility.

Specifically, the Company's high level of indebtedness could have important consequences, including:

- limiting the Company's ability to obtain additional financing to fund future working capital, capital expenditures, acquisitions or other general corporate requirements, or requiring the Company to make non-strategic divestitures;
- requiring a substantial portion of the Company's cash flows to be dedicated to debt service payments instead of other purposes, thereby reducing the amount of cash flows available for working capital, capital expenditures, acquisitions and other general corporate purposes;
- increasing the Company's vulnerability to general adverse economic and industry conditions;
- exposing the Company to the risk of increased interest rates as certain of its borrowings are at variable rates of interest;
- limiting the Company's flexibility in planning for and reacting to changes in the industry in which it competes;
- placing the Company at a disadvantage compared to other, less leveraged competitors; and
- increasing the Company's cost of borrowing.

Subject to the limits contained in the 2023 Senior Credit Facility Agreement, the Non-Priced Copper Prepayment Facility Agreement the NX Gold Stream Agreement, the Note Indenture and any limits under our other debt instruments, the Company and its subsidiaries may be able to incur additional debt from time to time to finance working capital, capital expenditures, investments or acquisitions or for other purposes. If the Company does so, the risks related to its high level of indebtedness could intensify.

In addition, from time to time, new accounting rules, pronouncements and interpretations are enacted or promulgated that may require the Company, depending on the nature of those new accounting rules, pronouncements and interpretations, to reclassify or restate certain elements of our financing agreements and

other debt instruments, which may in turn cause us to be in breach of the financial or other covenants contained in our financing agreements and other debt instruments.

The Company may not be able to generate sufficient cash to service all of its indebtedness and may be forced to take other actions to satisfy its obligations under such indebtedness, which may not be successful

The Company's ability to make scheduled payments on, repay in full or refinance its debt obligations, including the Notes, the 2023 Senior Credit Facility and the Non-Priced Copper Prepayment Facility, depends on the Company's financial condition and operating performance, which are subject to prevailing economic and competitive conditions and to certain financial, business, legislative, regulatory and other factors beyond its control, including metal prices. The Company may be unable to maintain a level of cash flows from operating activities sufficient to permit it to pay the principal, premium, if any, and interest on its indebtedness, including the Notes, the 2023 Senior Credit Facility and the Non-Priced Copper Prepayment Facility.

If the Company's cash flows and capital resources are insufficient to fund its debt service obligations, the Company could face substantial liquidity problems and could be forced to reduce or delay investments and capital expenditures or to dispose of material assets or operations, seek additional debt or equity capital or restructure or refinance its indebtedness, including the Notes, the 2023 Senior Credit Facility and the Non-Priced Copper Prepayment Facility. The Company may not be able to effect any such alternative measures on commercially reasonable terms or at all and, even if successful, those alternatives may not allow the Company to meet its scheduled debt service obligations. The 2023 Senior Credit Facility Agreement, the Non-Priced Copper Prepayment Facility Agreement and the Note Indenture will restrict the Company's ability to dispose of assets and use the proceeds from those dispositions and may also restrict the Company's ability to raise debt or equity capital to be used to repay other indebtedness when it becomes due. The Company may not be able to consummate those dispositions or to obtain proceeds in an amount sufficient to meet any debt service obligations then due.

The Company's inability to generate sufficient cash flows to satisfy its debt obligations, or to refinance its indebtedness on commercially reasonable terms or at all, would materially and adversely affect the Company's financial position and results of operations and its ability to satisfy its obligations under debt instruments, including the Note Indenture, the 2023 Senior Credit Facility Agreement and the Non-Priced Copper Prepayment Facility Agreement.

If the Company cannot make scheduled payments on its debt, the Company will be in default and holders of the Notes could declare all outstanding principal and interest to be due and payable, enabling lenders under the 2023 Senior Credit Facility Agreement to cancel their commitments to lend and the Company's and its subsidiaries' other creditors could foreclose against the collateral securing their obligations and the Company could be forced into bankruptcy, liquidation or restructuring proceedings.

Counterparties may default on their contractual obligations to the Company

The Company is exposed to various counterparty risks including, but not limited to: (i) financial institutions that hold its cash and short-term investments; (ii) companies that have payables to the Company, including copper concentrate and doré bars customers; (iii) providers of the Company's risk management services; (iv) shipping service providers that move the Company's supplies, products and other material; (v) the Company's insurance providers; and (vi) the Company's lenders. Although the Company makes efforts to limit its counterparty risk, the Company cannot effectively operate its business without relying, to a certain extent, on the performance of third-party service providers.

A failure to maintain satisfactory labour relations can adversely impact the Company

The Company's operations and further development of the Caraíba Operations, the Xavantina Operations and the Tucumã Operations are dependent upon the efforts of its employees and the Company's relations with its unionized and non-unionized employees, and the Company's operations would be adversely affected if it failed

to maintain satisfactory labour relations. Some of MCSA's and NX Gold's employees are represented by labour unions under various collective bargaining agreements. The collective bargaining agreement of MCSA for the Caraíba Operations was renewed in November 2024 and is subject to renewal every year thereafter. The collective bargaining agreement of MCSA for the Tucumã Operations was entered into in February 2023 and is subject to renewal every two years thereafter – negotiations to renew the collective bargaining agreement commenced in late February 2025. The collective bargaining agreement of NX Gold for the Xavantina Operations was renewed in June 2024 and is subject to renewal every two years thereafter. The Company may not be able to satisfactorily renegotiate its collective bargaining agreements when they expire and may face tougher negotiations or higher compensation demands than would be the case for non-unionized labour. In addition, the existing collective bargaining agreements may not prevent a strike or work stoppage at the Company's facilities in the future. Further, relations between the Company and its employees may be affected by changes in the scheme of labour relations that may be introduced by the relevant governmental authorities who have jurisdiction over the various aspects of the Company's business. Changes in such legislation or in the relationship between the Company and its employees may have a material adverse effect on the Company's business, results of operations and financial condition.

The Company's insurance coverage may be inadequate to cover potential losses

The Company's business is subject to a number of risks and hazards as further described in this AIF. Although the Company maintains insurance to protect against certain risks in such amounts as it considers to be reasonable, its insurance will not cover all the potential risks associated with its activities, including current and any future mining operations. The Company may also be unable to obtain or maintain insurance to cover its risks at economically feasible premiums, or at all. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration, development, construction or production may not be available to the Company on acceptable terms. The Company might also become subject to liability for pollution or other hazards which it is not currently insured against and/or in the future may not insure against because of premium costs or other reasons. Losses from these events may cause the Company to incur significant costs which could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

It may be difficult to enforce judgments and effect service of process on directors, officers and experts named herein

Some of the directors and officers of the Company reside outside of Canada, and each of GE21, BNA, NCL, Ausenco and HCM is incorporated, continued or otherwise organized under the laws of a foreign jurisdiction. Some or all of the assets of those persons may be located outside of Canada. Therefore, it may not be possible for investors to collect or to enforce judgments obtained in Canadian courts predicated upon the civil liability provisions of applicable Canadian securities laws against such persons. Moreover, it may not be possible for investors to effect service of process within Canada upon such persons.

The Company's directors and officers may have conflicts of interest with the Company

Certain directors and officers of the Company are or may become associated with other mining and/or mineral exploration and development companies which may give rise to conflicts of interest. Directors who have a material interest in any person who is a party to a material contract or a proposed material contract with the Company are required, subject to certain exceptions, to disclose that interest and generally abstain from voting on any resolution to approve such a contract. In addition, directors and officers are required to act honestly and in good faith with a view to the best interests of the Company. Some of the directors and officers of the Company have either other full-time employment or other business or time restrictions placed on them and accordingly, the Company will not be the only business enterprise of these directors and

officers. Further, any failure of the directors or officers of the Company to address these conflicts in an appropriate manner or to allocate opportunities that they become aware of to the Company could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Future acquisitions may require significant expenditures and may result in inadequate returns

The Company may seek to expand through future acquisitions; however, there can be no assurance that the Company will locate attractive acquisition candidates, or that the Company will be able to acquire such candidates on economically acceptable terms, if at all, or that the Company will not be restricted from completing acquisitions pursuant to the terms and conditions from time to time of arrangements with third parties, such as the Company's creditors. Future acquisitions may require the Company to expend significant amounts of cash, resulting in the Company's inability to use these funds for other business or may involve significant issuances of equity or debt. Future acquisitions may also require substantial management time commitments, and the negotiation of potential acquisitions and the integration of acquired operations could disrupt the Company's business by diverting management and employees' attention away from day-to-day operations. The difficulties of integration may be increased by the necessity of coordinating geographically diverse organizations, integrating personnel with different backgrounds and combining different corporate cultures.

Any future acquisition involves potential risks, including, among other things: (i) mistaken assumptions and incorrect expectations about mineral properties, Mineral Resources, Mineral Reserves and costs; (ii) an inability to successfully integrate any operation the Company acquired or acquires, as applicable; (iii) an inability to recruit, hire, train or retain qualified personnel to manage and operate the operations acquired; (iv) the assumption of unknown liabilities; (v) mistaken assumptions about the overall cost of equity or debt; (vi) unforeseen difficulties operating acquired projects, which may be in geographic areas new to the Company; and (vii) the loss of key employees and/or key relationships at the acquired project. In addition, the Acquisitions were completed with certain of the prior shareholders of MCSA and NX Gold on an "as is where is" basis, and therefore the Company has no rights of recourse and indemnities against the sellers. Future acquisitions may be subject to similar or other limitations as to rights of recourse and indemnities against the sellers.

Future acquisition candidates may have liabilities or adverse operating issues that the Company failed or fails to discover through due diligence prior to the acquisition. If the Company consummates any future acquisitions with, unanticipated liabilities or adverse operating issues or if acquisition-related expectations are not met, the Company's business, results of operations, cash flows, financial condition or prospects may be materially adversely affected. The potential impairment or complete write-off of goodwill and other intangible assets related to any such acquisition may reduce the Company's overall earnings and could negatively affect the Company's balance sheet.

Disclosure and internal control deficiencies may adversely affect the Company

Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. Disclosure controls and procedures are designed to ensure that the information required to be disclosed by the Company in reports filed with securities regulatory agencies is recorded, processed, summarized and reported on a timely basis and is accumulated and communicated to the Company's management, as appropriate, to allow timely decisions regarding required decisions. The Company has invested resources to document and evaluate its system of disclosure controls and its internal control over financial reporting. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance with respect to the reliability of financial reporting and financial statement preparation. The Company's failure to satisfy the requirements of applicable Canadian and United States securities laws on an ongoing, timely basis could result in the loss of investor confidence in the reliability of its financial statements, which in turn could harm its business and negatively impact the trading price of the Company's securities, including the Common Shares. In addition, any failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm the Company's operating results or cause it to fail to meet its reporting obligations.

Failures of information systems or information security threats can be costly

The secure processing, maintenance and transmission of information and data is critical to the Company's business. The Company has entered into agreements with third party service providers for hardware, software, telecommunications and other information technology services in connection with its operations. The Company and its third party service providers collect and store sensitive data in the ordinary course of the Company's business, including personal information of employees, as well as proprietary and confidential business information relating to the Company and, in some cases, the Company's customers, suppliers and other stakeholders. With the increasing dependence and interdependence on electronic data communication and storage, including the use of cloud-based services and personal devices, the Company is exposed to evolving technological risks relating to this information and data. These risks include, but are not limited to, installation of malicious software, phishing, targeted attacks on the Company's systems or on systems of third parties that the Company relies on, failure or non-availability of a key information technology system, or a breach of security measures designed to protect the Company's systems. While the Company employs security measures in respect of its information and data, including implementing systems to monitor and detect threats; regular information security training for employees with access to sensitive information and data, including the use of multi-factor authentication and an online platform that provides formal cyber security awareness training and deploys periodic phishing email tests to evaluate and assess user knowledge of various prevailing security threats; the performance of periodic audits and penetration testing, the Company cannot be certain that it will be successful in securing this information and data and there may be instances where the Company is exposed to malware, cyber-attacks or other unauthorized access or use of the Company's information and data.

Although, since its incorporation in 2016, the Company has not experienced any known significant cyber-attacks or other information security breaches, there can be no assurance that it will not incur such losses in the future. The Company has implemented quarterly reporting to its Audit Committee and Board of information security matters, such as the implementation of new information security technology and training initiatives as well as risks. The Company's risk and exposure to these matters cannot be fully mitigated because of, among other things, the evolving nature of these threats. Any data breach or other improper or unauthorized access or use of its information could have a material adverse effect on the Company's business and could severely damage its reputation, compromise its network or systems and result in a loss or escape of sensitive information, a misappropriation of assets or incidents of fraud, disrupt its normal operations, and cause it to incur additional time and expense to remediate and improve its information systems. As a result, cyber security and the continued development and enhancement of controls, processes and practices designed to protect systems, computers, software, data and networks from attack, damage or unauthorized access remain a priority. As cyber threats continue to evolve, the Company may be required to expend additional resources to continue to modify or enhance protective measures or to investigate and remediate any security vulnerabilities. Any of these factors could have a material adverse effect on the Company's results of operations, cash flows and financial position.

To protect Ero from cyber threats, the Company uses Darktrace. While Darktrace can provide valuable protection to our Company by enhancing our cybersecurity posture, the system might produce false positives, flagging legitimate activities as potential threats, due to the use of machine learning to identify unusual patterns of behaviour that could indicate cyber threats. In addition, Darktrace provides automated threat detection and response. Over-reliance on automation could result in insufficient human oversight. As cybersecurity incidents could have severe consequences to the Company's business, a fully automated response might not always be appropriate. However, to mitigate these risks, the Company has a dedicated IT department that oversees and monitors the performance of Darktrace. The lack of oversight of Darktrace could have a material adverse effect on the Company's results of operations, cash flows and financial position.

The Company's reliance on AI Systems may create safety concerns

An AI system is a machine-based system that, for explicit or implicit objectives, infers from the input it receives how to generate outputs such as predictions, content, recommendations or decisions that can influence physical or virtual environments ("**AI System**"). Ero uses AI Systems, such as Darktrace, to secure processing, maintenance and transmission of information and data.

Some of the risks associated with the use of AI systems are: (i) due to reliance on high-quality data, if the data is inaccurate, incomplete or biased, the AI System could make incorrect predictions; (ii) AI systems can be vulnerable to cyberattacks; (iii) the technology used by AI systems may fail to adapt to unexpected situations and its ability to improve safety by predicting hazards and automating dangerous tasks could fail. The reliance on AI systems may create safety concerns and could have a material adverse effect on the Company's results of operations, cash flows and financial position.

The Company may be subject to costly legal proceedings

The Company may be subject to regulatory investigations, civil claims, lawsuits and other proceedings in the ordinary course of its business. The results of these legal proceedings cannot be predicted with certainty due to the uncertainty inherent in regulatory actions and litigation, the difficulty of predicting decisions of regulators, judges and juries and the possibility that decisions may be reversed on appeal. Defense and settlement costs of legal disputes can be substantial, even with claims that have no merit. Management is committed to conducting business in an ethical and responsible manner, which it believes will reduce the risk of legal disputes. However, if the Company is subject to legal disputes, there can be no assurances that these matters will not have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Moreover, pursuant to the Acquisitions, the Company acquired operations that have been ongoing for a significant period of time. The Company inherited certain liabilities as a result and has been subject to a number of claims (including claims related to tax, labour and social security matters and civil action) in the course of its business which individually are not material. To the extent management believes it is probable that a material cash outflow will be incurred to settle a claim, a provision for the estimated settlement amount is recorded. If the Company is unable to resolve these disputes favorably, it could have an adverse impact on the Company's financial condition, results of operations, cash flows or prospects.

The Public Prosecutor's Office of the State of Bahia (the "PPO") is mandated to protect the environment and in furtherance of this mandate, the PPO is empowered to audit the extractive industry's compliance with environmental laws and regulations. In 2021, the PPO commenced an audit relating to the Caraíba Operations' compliance with environmental laws and regulations over its entire operating history, spanning over 40 years. There is no assurance that the Caraíba Operations has been in full compliance with all environmental laws and regulations throughout its operating history, and there may be instances of non-compliance that are unknown to the Company, including instances caused by previous owners or operators, and for which the Company and its subsidiaries may be liable. A determination by the PPO that the Caraíba Operations has failed to comply with applicable environmental laws and regulations during its extensive operating history may result in enforcement actions, including corrective measures requiring capital expenditures, installation of additional equipment, remedial actions or civil or criminal fines or penalties imposed for violations of applicable environmental laws or regulations, and in extreme cases of non-compliance, orders issued by regulatory or judicial authorities causing operations to cease or be curtailed until such time as corrective measures and remedial actions are completed. Any such enforcement action relating to extreme cases of non-compliance could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Additionally, the legal system in Brazil has inherent uncertainties that could limit the legal protections available to the Company, which include: (i) inconsistencies between and within laws; (ii) limited judicial and administrative guidance on interpreting Brazilian legislation, particularly that relating to business, corporate and securities laws; (iii) substantial gaps in the regulatory structure due to a delay or absence of enabling regulations; (iv) a lack of judicial independence from political, social and commercial forces; (v) corruption; and (vi) bankruptcy procedures that are subject to abuse, any of which could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

Furthermore, it may be difficult to obtain swift and equitable enforcement of a Brazilian judgement, or to obtain enforcement of a judgement by a court of another jurisdiction, which could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

The Company may be subject to shareholder activism

In recent years, publicly-traded companies have been increasingly subject to demands from activist shareholders advocating for changes to corporate governance practices, such as executive compensation practices, social issues, or for certain corporate actions or reorganizations. There can be no assurances that activist shareholders will not publicly advocate for the Company to make certain corporate governance changes or engage in certain corporate actions. Responding to challenges from activist shareholders, such as proxy contests, media campaigns or other activities, could be costly and time consuming and could have an adverse effect on the Company reputation and divert the attention and resources of the Company management and the Board, which could have an adverse effect on the Company's business and results of operations. Even if the Company does undertake such corporate governance changes or corporate actions, activist shareholders may continue to promote or attempt to effect further changes, and may attempt to acquire control of the Company to implement such changes. If shareholder activists seeking to increase short-term shareholder value are elected to the Board, this could adversely affect the Company's business and future operations. Additionally, shareholder activism could create uncertainty about the Company's future strategic direction, resulting in loss of future business opportunities, which could adversely affect the Company's business, future operations, profitability and ability to attract and retain qualified personnel.

Product alternatives may reduce demand for the Company's products

Copper and gold have a number of different applications. Alternative technologies are continually being investigated and developed with a view to reducing production costs or for other reasons, such as minimizing environmental or social impact. If competitive technologies emerge that use other materials in place of copper or gold, demand and price for copper or gold might fall, which could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

A lowering or withdrawal of the ratings assigned to the Company's debt securities by rating agencies may increase the Company's future borrowing costs and reduce its access to capital

The Notes have a non-investment grade rating assigned by Moody's Investors Service ("**Moody's**"), S&P Global Ratings ("**S&P**") and Fitch Ratings ("**Fitch**"), and could be lowered or withdrawn entirely by a particular rating agency in the future if, in that rating agency's judgment, circumstances relating to the basis of the rating, such as adverse changes, so warrant. Consequently, real or anticipated changes in the Company's credit ratings likely would make it more difficult or more expensive for the Company to obtain additional debt financing.

Risks Related to the Company's Foreign Operations

The Company's Brazilian operations are subject to political and other risks associated with operating in a foreign jurisdiction

The Caraíba Operations, the Xavantina Operations, the Tucumã Operations and the Furnas Project are located in Brazil, exposing the Company to the socioeconomic conditions as well as the laws governing the mining industry in the country. Inherent risks with conducting foreign operations include, but are not limited to: high rates of inflation; extreme fluctuations in currency exchange rates, military repression; war or civil war; social and labour unrest; organized crime; hostage taking; terrorism; violent crime; expropriation and nationalization; renegotiation or nullification of existing concessions, licenses, approvals, permits and contracts; illegal mining; changes in taxation policies; restrictions on foreign exchange and repatriation; and changing political norms, currency controls and governmental regulations that favour or require the Company to award contracts in, employ citizens of, or purchase supplies from, the jurisdiction.

The Brazilian government frequently intervenes in the Brazilian economy and occasionally makes significant changes in policies and regulations. Changes, if any, in mining or investment policies or shifts in political attitude in Brazil (stemming from the recent changes to the Brazilian government or otherwise) may adversely affect the Company's operations or profitability. Operations may be affected in varying degrees by government regulations

with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, importation of parts and supplies, income and other taxes, royalties, the repatriation of profits, expropriation of property, foreign investment, awarding of concessions under the new land tender system in Brazil, maintenance of concessions, licenses, approvals and permits, environmental matters, construction and operation of tailings dams, land use, land claims of local people, water use and mine safety. Failure to comply strictly with applicable laws, regulations and local practices relating to mineral right applications and tenure could result in loss, reduction or expropriation of entitlements, or the imposition of additional local or foreign parties as joint venture partners with carried or other interests.

In addition, uncertainty over whether the new Brazilian government will implement changes in policy or regulation may contribute to economic uncertainty in Brazil. Historically, Brazilian politics have affected the performance of the Brazilian economy. Past political crises have affected the confidence of investors and the public, generally resulting in an economic slowdown.

Global economic crises could negatively affect investor confidence in emerging markets or the economies of the principal countries in Latin America, including Brazil. Such events could materially and adversely affect the Company's business, financial condition, results of operations, cash flows or prospects.

The Company continues to monitor developments and policies in Brazil and the impact thereof to its operations; however, they cannot be accurately predicted and could have an adverse effect on the Company's operations or profitability.

The Company may be negatively impacted by changes to mining laws and regulations

The Company's activities are subject to various laws governing prospecting, exploration, development, production, taxes, labour standards and occupational health, mine safety, harmful or toxic substances, water quality standards, construction and operation of tailings dams and other matters. Mining, exploration and development activities are also subject to various laws and regulations relating to the protection of the environment. Although the Company believes that its activities are currently carried out in accordance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner that could limit or curtail production, development or construction of the Company's properties, including new rules and regulations or existing rules and regulations that could be applied in a manner requiring the Company's mining concessions to be amended to expressly permit the extraction of certain by-products. Amendments to current laws and regulations governing the Company's operations and activities, including the Company's mining concessions and permits, or more stringent implementation of such laws and regulations could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects.

It is uncertain how the current and past operations of the Company will be affected by future legal changes or more stringent enforcement of past and current laws and regulations by governmental authorities. The Company may be subject to administrative, civil and criminal sanctions should a more conservative interpretation of past and current laws and regulations be adopted by governmental authorities.

In October 2020, the Brazilian government enacted certain changes to the National Dams Safety Policy and Mining Code, which, among other things, bans the construction and lifting of tailings dams using the upstream method; requires the decommissioning of existing tailings dams utilizing the upstream method by February 25, 2022 or such later date as agreed between the operator and applicable regulatory agencies; places a higher degree of safety planning, monitoring and reporting obligations on operators; provides broader enforcement rights to regulatory agencies (such as ANM and environmental agencies); and, introduces administrative penalties for non-compliance, including, but not limited to, warnings, fines between

R\$2,000 and R\$1,000,000,000, partial or total suspension of activities, seizure of mining products, assets and equipment, cancellation of mining concessions and/or restriction of other rights. Such penalties are to be applied independently of criminal sanctions or damage repair obligations.

The Company operates and maintains tailings facilities at its Caraíba Operations, Xavantina Operations and the Tucumã Operations. Such facilities are maintained and regulated under Brazilian law, which are subject to change from time to time. Each of these facilities is routinely inspected by the Company's internal technical teams, third-party engineering firms and applicable regulatory agencies. At the Caraíba Operations, the Company utilizes multiple tailings management methods. The Caraíba Operations utilizes a system of co-disposal paddocks to filter water from process tailings, a conventional tailings storage facility and utilizes tails for paste back-fill. The paddock system consists of several waste rock structures constructed using the downstream method. Slurried tailings are deposited within paddock cells, which enable water to filter through the coarse waste rock and tailings. The resulting dry tailings are removed from the paddock cells and placed in lifts in a permanent dry-stack area. Water that filters through the co-disposed tailings and waste rock is captured and recycled for operational use. In addition to the paddock tailings filtration system, the Caraíba Operations utilizes a tailings storage facility built using a single lift rockfill dam. The facility is in operation, and sections of the facility have been progressively reclaimed over the years. In addition, tailings are used for paste backfill for the underground Pilar Mine. At the Xavantina Operations, non-inert tailings from the Company's leaching process is stored in a high density polyethylene (HDPE) lined excavated pit. Inert tailings are stored in a single-lift rockfill dam of segmented ring-dyke design, with only one cell operational at any given time until the tailings are de-watered. De-watered inert tailings are transported periodically from the tailings storage facility to reclaim legacy areas disturbed by historic artisanal mining activity or within permitted long-term storage areas. Once filled, these areas are revegetated and reclaimed as part of the Company's ongoing environmental sustainability efforts. At the Tucumã Operations tailings are actively de-watered using filter presses. The filter cake is transported, and compacted for permanent disposal in the Company's dry-stack tailings facility. Where necessary, the material is blended with waste rock and reinforced with rock buttresses. A comprehensive guide to the Company's tailings facilities can be found on the Company's website (www.ero.copper.com) under "*Sustainability - Tailings Management*". For additional scientific and technical information regarding the Company's tailings management practices, please refer to the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report, each of which is available for review on the Company's website and under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ and EDGAR at www.sec.gov.

Should a breach of these facilities occur due to extreme weather, seismic event, or other incident, the Company could cause a significant environmental incident and/or suffer a material financial impact on its operations and financial condition, including the potential for criminal and financial liability, suspension of its operations and/or loss of its mining concessions.

On December 22, 2021, the National Institute of Colonization and Land Reform ("**INCRA**") enacted Rule #112 (Instrução Normativa 112), which came into force on January 3, 2022, formalizing the process by which approval is to be obtained from INCRA for the use of land in areas designated for land settlement programs in the case of mining, energy or infrastructure projects. In August 2015, MCSA resettled residents of a designated land settlement area that would be impacted by operations at the Tucumã Operations. Such residents were resettled onto equal, if not superior, land. Prior to the enactment of Rule #112, MCSA submitted its request for INCRA's final approval of the resettlement process, required to formally cede the use of the land to MCSA. Any unexpected delay in or failure to receive the required final approval from INCRA in a timely manner or on reasonable terms given the enactment of Rule #112 or otherwise, could delay or, in the extreme case where the resettlement process is determined by INCRA to be materially deficient, the Company could be required to provide additional consideration, which could adversely impact the Company's business, financial condition, results of operations, cash flows and prospects.

A failure to maintain relationships with the communities in which the Company operates and other stakeholders may adversely affect the Company's business.

The Company's relationships with the communities in which it operates and other stakeholders are critical to ensure the future success of its existing operations and the construction and development of its projects. There is an increasing level of public concern relating to the perceived effect of mining activities on the environment and on communities impacted by such activities. The evolving expectations related to human rights and

environmental protection may result in opposition to the Company's current and future operations or further development or new development of the Company's projects and mines. Such opposition may be directed through legal or administrative proceedings or expressed in manifestations such as protests, roadblocks or other forms of public expression against the Company's activities and may have a negative impact on the Company's reputation and operations.

Opposition by any of the aforementioned groups to the Company's operations may require modification of, or preclude the operation or development of, the Company's projects and mines or may require the Company to enter into agreements with such groups or local governments with respect to the Company's projects and mines, in some cases, causing increased cost and considerable delays to the advancement of the Company's projects. Further, publicity adverse to the Company, its operations or extractive industries generally, could have an adverse effect on the Company and may impact relationships with the communities in which Ero operates and with other stakeholders. While the Company is committed to operating in a socially responsible manner, there can be no assurance that its efforts in this respect will mitigate this potential risk.

Inaccuracies, corruption and fraud in Brazil relating to ownership of real property may adversely affect the Company's business

Under Brazilian law, real property ownership is normally transferred by means of a transfer deed, and subsequently registered at the appropriate real property registry office under the corresponding real property record. There are uncertainties, corruption and fraud relating to title ownership of real property in Brazil, mostly in rural areas. In certain cases, a real property registry office may register deeds with errors, including duplicate and/or fraudulent entries, and, therefore, deed challenges frequently occur, leading to judicial actions. Property disputes over title ownership are frequent in Brazil, and, as a result, there is a risk that errors, fraud or challenges could adversely affect the Company's ability to operate, although ownership of mining rights are separate from ownership of land.

The Company is exposed to the possibility that applicable taxing authorities could take actions that result in increased tax or other costs that might reduce the Company's cash flow

The Company pays a variety of taxes, fees and other governmental charges in connection with the operation of the Company's business, including income taxes, mining royalties, ad valorem property taxes, sales and use taxes, inventory taxes, social security contributions, taxes on control and monitoring of mining resources and various assessments. These taxes, fees and other charges are assessed by a variety of taxing authorities pursuant to applicable laws, regulations and rules. The Brazilian tax regime is complex and subject to a variety of interpretations by government authorities. Such complexity may expose the Company to unpredicted challenges to day to day practices in bookkeeping, accounting and payment of taxes. From time to time, the Company may enter into specific agreements with such taxing authorities that provide for the reduction, abatement or deferral of such taxes, fees or charges in exchange for certain payments or undertakings on the Company's part. If the Company enters into any such arrangements, the Company can give no assurance that any such reduction, abatement or deferral arrangements will be honored or that the applicable taxing authorities will not take actions that materially increase the amount of such taxes, fees or other governmental charges that the Company is required to pay. In addition, the Company may incur additional and unanticipated costs and expenses in connection with the Company's efforts to resist any proposed increases in such taxes, fees or other charges or in connection with the Company's efforts to enforce any reduction, abatement or deferral arrangements that the Company has previously put in place.

The Brazilian government may implement changes to the Brazilian tax regime that may affect the Company including, but not limited to, increasing income taxes, mining royalties, ad valorem property taxes, sales and use taxes, inventory taxes, social security contributions and taxes on control and monitoring of mining resources. These changes could include changes

in prevailing tax rates and the imposition of new or temporary taxes, the proceeds of which are earmarked for designated government purposes. Some of these changes may result in increases in the Company's tax payments, which could have an adverse effect on the Company's operations or

profitability. The Company cannot provide assurance that it will be able to be profitable following any increases in Brazilian taxes applicable to the Company and its operations.

The Company is subject to a number of ongoing proceedings in Brazil related to tax matters that have not been accounted for in its financial statements, given the Company's assessment of the probability of adverse judgment against it. Management regularly reviews these tax matters with outside counsel to assess the likelihood that the Company will incur a material cash outflow to settle the claim. To the extent management believes it is probable that a material cash outflow will be incurred to settle the claim, a provision for the estimated settlement amount is recorded. If the Company is unable to resolve these disputes favorably, it could have an adverse impact on the Company's financial condition, results of operations, cash flows or prospects.

Inflation in Brazil, along with Brazilian governmental measures to combat inflation, may have a significant negative effect on the Brazilian economy and also on the Company's financial condition and results of operations

In recent years and historically, high levels of inflation have adversely affected the economies and financial markets of Brazil, and the ability of its government to create conditions that stimulate or maintain economic growth. Moreover, governmental measures to curb inflation and speculation about possible future governmental measures have contributed to the negative economic impact of inflation in Brazil and have created general economic uncertainty. As part of these measures, the Brazilian government has at times maintained a restrictive monetary policy and high interest rates that have limited the availability of credit and economic growth. Brazil may continue to experience high levels of inflation in the future. Inflationary pressures may weaken investor confidence in Brazil and lead to further government intervention in the economy, including interest rate increases, restrictions on tariff adjustments to offset inflation, intervention in foreign exchange markets and actions to adjust or fix currency values, which may trigger or exacerbate increases in inflation, and consequently have an adverse impact on the Company. In an inflationary environment, the value of uncollected accounts receivable, as well as of unpaid accounts payable, declines rapidly. If Brazil experiences high levels of inflation in the future and price controls are imposed, the Company may not be able to adjust the rates the Company charges its customers to fully offset the impact of inflation on the Company's cost structures, which could adversely affect the Company's results of operations or financial condition.

Exchange rate instability may have a material adverse effect on the Brazilian economy

The Brazilian Real has experienced frequent and substantial variations in relation to the U.S. dollar and other foreign currencies during the last decades. Depreciation of the Brazilian Real against the U.S. dollar could create inflationary pressures in Brazil and cause increases in interest rates, which could negatively affect the growth of the Brazilian economy as a whole and harm the Company's financial condition and results of operations. On the other hand, appreciation of the Brazilian Real relative to the U.S. dollar and other foreign currencies could lead to a deterioration of the Brazilian foreign exchange current accounts, as well as dampen export-driven growth. Depending on the circumstances, either depreciation or appreciation of the Brazilian Real could have a material adverse effect on the Brazilian economy.

The Company's operations may be impaired as a result of restrictions to the acquisition or use of rural properties by foreign investors or Brazilian companies under foreign control

Non-resident individuals and non-domiciled foreign legal entities are subject to restrictions for the acquisition or lease for agricultural purpose or ownership or access rights in respect of rural properties in Brazil. Limitations also apply to legal entities domiciled in Brazil controlled by foreign investors, such as the Company's subsidiaries through which the Company operates in Brazil.

Accordingly, the Company's current and future operations may be impaired as a result of such restrictions on the acquisition or use of rural properties, and the Company's ownership or access rights in respect of any rural properties in Brazil may be subject to legal challenges, all of which could result in a material adverse effect on the Company's business, results of operations, financial condition and cash flows.

Recent disruptions in international and domestic capital markets may lead to reduced liquidity and credit availability for the Company

The disruptions recently experienced in the international and domestic capital markets have led to reduced liquidity and increased credit risk premiums for certain market participants and have resulted in a reduction of available financing. Companies located in countries in the emerging markets may be particularly susceptible to these disruptions and reductions in the availability of credit or increases in financing costs, which could result in them experiencing financial difficulty. In addition, the availability of credit to entities operating within the emerging and developing markets is significantly influenced by levels of investor confidence in such markets as a whole and as such any factors that impact market confidence (for example, the impacts of global tariff disputes or health crises, an increase in the rate of inflation, an increase to interest rates, a decrease in credit ratings, state or central bank intervention in one market, or terrorist activity and conflict, and global political or economic events such as the resumption, continuance or escalation of the conflict in the Middle East and/or the Russia-Ukraine conflict and the economic sanctions imposed thereon in connection therewith) could affect the price or availability of funding for entities within any of these markets.

The Company may be responsible for corruption and anti-bribery law violations

The Company's business is subject to the United States *Foreign Corrupt Practices Act of 1977* ("**FCPA**") and the Corruption of Foreign Public Officials Act (Canada) ("**CFPOA**"), which generally prohibit companies and company employees from engaging in bribery or other prohibited payments to foreign officials for the purpose of obtaining or retaining business. The FCPA also requires companies to maintain accurate books and records and internal controls, including at foreign-controlled subsidiaries. Since all of the Company's presently held interests are located in Brazil, there is a risk of potential FCPA violations. In addition, the Company is subject to the anti-bribery laws of Brazil and of any other countries in which it conducts business in the future. The Company's employees or other agents may, without its knowledge and despite its efforts, engage in prohibited conduct under the Company's policies and procedures and the FCPA, the CFPOA or other anti-bribery laws for which the Company may be held responsible. The Company's Code of Business Conduct and Ethics, Supplier Code of Conduct and Anti-Corruption Policy mandate compliance with these anti-corruption and anti-bribery laws and the Company has implemented training programs, internal monitoring and controls, and reviews and audits to ensure compliance with such laws. However, there can be no assurance that the Company's internal control policies and procedures will always protect it from recklessness, fraudulent behavior, dishonesty or other inappropriate acts committed by its affiliates, employees, contractors or agents. If the Company's employees or other agents are found to have engaged in such practices, the Company could suffer severe penalties and other consequences that may have a material adverse effect on its business, financial condition and results of operations.

Risks Related to the Company's Securities

Investors may lose their entire investment

An investment in the securities of the Company, including the Common Shares, is speculative and may result in the loss of an investor's entire investment. Only potential investors who are experienced in high risk investments and who can afford to lose their entire investment should consider an investment in the Company.

Dilution from equity financing could negatively impact holders of Common Shares

The Company may from time to time raise funds through the issuance of Common Shares or the issuance of debt instruments or other securities convertible into Common Shares. The Company cannot predict the size or price of future

issuances of Common Shares or the size or terms of future issuances of debt instruments or other securities convertible into Common Shares, or the effect, if any, that future issuances and sales of the Company's securities will have on the market price of the Common Shares. Sales or issuances of substantial numbers of Common Shares, or the perception that such sales or issuances could occur, may adversely affect prevailing market prices of the Common Shares. With any additional sale or issuance of Common Shares, or securities

convertible into Common Shares, investors will suffer dilution to their voting power and the Company may experience dilution in its earnings per share.

Additional issuances of our securities may involve the issuance of a significant number of our Common Shares at prices less than the current market price for the Common Shares. Any transaction involving the issuance of previously authorized but unissued Common Shares, or securities convertible into Common Shares, would result in dilution, possibly substantial, to security holders. Sales of substantial amounts of our securities by us or our existing shareholders, or the availability of such securities for sale, could adversely affect the prevailing market prices for our securities and, in the case of sales of our securities from treasury, dilute investors' earnings per share. Sales of our Common Shares by shareholders might also make it more difficult for us to sell equity securities at a time and price that we deem appropriate. Exercises of presently outstanding Options (as defined below) or settlement of presently outstanding RSUs (as defined below) or PSUs (as defined below) in Common Shares may also result in dilution to security holders. A decline in the market prices of our securities could impair our ability to raise additional capital through the sale of securities should we desire to do so.

Equity securities are subject to trading and volatility risks

The securities of publicly traded companies can experience a high level of price and volume volatility and the value of the Company's securities can be expected to fluctuate depending on various factors, not all of which are directly related to the success of the Company and its operating performance, underlying asset values or prospects. These include the risks described elsewhere in this AIF. Factors which may influence the price of the Company's securities, including the Common Shares, include, but are not limited to:

- worldwide economic conditions;
- global political conditions or events such as the ongoing conflict in the Middle East and the Russia-Ukraine conflict;
- changes in government policies;
- investor perceptions;
- movements in global interest rates and global stock markets;
- variations in operating costs;
- the cost of capital that the Company may require in the future;
- metals prices;
- currency exchange fluctuation;
- the price of commodities necessary for the Company's operations;
- recommendations by securities research analysts;
- issuances of equity securities or debt securities by the Company;
- operating performance and, if applicable, the share price performance of the Company's competitors;
- the addition or departure of key management and other personnel;
- significant acquisitions or business combinations, strategic partnerships, joint ventures or capital commitments by or involving the Company or its competitors;
- news reports relating to trends, concerns, technological or competitive developments, regulatory changes, global health crises, and other related industry and market issues affecting the mining sector;
- litigation;
- publicity about the Company, the Company's personnel or others operating in the industry;

- loss of a major funding source; and
- all market conditions that are specific to the mining industry.

There can be no assurance that such factors will not affect the price of the Company's securities, and consequently purchasers of Common Shares may not be able to sell Common Shares at prices equal to or

greater than the price or value at which they purchased the Common Shares or acquired them by way of the secondary market.

Sales by existing shareholders can reduce share prices

Sales of a substantial number of Common Shares in the public market could occur at any time. These sales, or the market perception that the holders of a large number of Common Shares intend to sell Common Shares, could reduce the market price of the Common Shares. If this occurs and continues, it could impair the Company's ability to raise additional capital through the sale of securities.

The Company does not currently intend to pay dividends

The Company has not, since the date of its incorporation, declared or paid any dividends or other distributions on its Common Shares. The 2023 Senior Credit Facility Agreement and the Note Indenture impose certain restrictions on the Company's ability to declare or pay dividends or distributions (see *"Dividends and Distributions" below for more detail*).

The declaration and payment of any dividends in the future is at the discretion of the Board and will depend on numerous factors, including compliance with applicable laws, financial performance, contractual restriction (as noted above), working capital requirements of the Company and its subsidiaries and such other factors as its directors consider appropriate.

Public companies are subject to securities class action litigation risk

In the past, securities class action litigation has often been brought against a company following a decline in the market price of its securities. If the Company faces such litigation, it could result in substantial costs and a diversion of management's attention and resources, which could materially harm its business.

If securities or industry analysts do not publish research or publish inaccurate or unfavourable research about the Company's business, the price and trading volume of the Common Shares could decline

The trading market for the Common Shares will depend on the research and reports that securities or industry analysts publish about the Company and its business. The Company does not have any control over these analysts. The Company cannot assure that analysts will cover it or provide accurate or favourable coverage. If one or more of the analysts who cover the Company downgrade its stock or change their opinion of the Common Shares, price of Common Shares would likely decline. If one or more of these analysts cease coverage of the Company or fail to regularly publish reports, the Company could lose visibility in the financial markets, which could cause the price and trading volume of the Common Shares to decline.

Global economic conditions can reduce the price of the Common Shares

Global economic conditions may adversely affect Ero's growth, profitability and ability to obtain financing. Events in global financial markets continue to be characterized as volatile. In recent years, global markets have been adversely impacted by various credit crises, a global pandemic, the conflict in the Middle East, the Russia-Ukraine conflict and the economic sanctions imposed thereon in connection therewith and, more recently, global tariff disputes. Many industries, including the mining industry, have been impacted by these market conditions. Global economic conditions remain subject to sudden and rapid destabilizations in response to future events, as government authorities may have limited resources to respond to future crises. A continued or worsened slowdown in the financial markets or other economic conditions, including but not limited to consumer spending, employment rates, business conditions, inflation, tariffs, fuel and energy costs, consumer debt levels,

lack of available credit, the state of the financial markets, interest rates and tax rates, may adversely affect Ero's growth, profitability and ability to obtain financing. A number of issues related to economic conditions could have a material adverse effect on the Company's business, financial condition, results of operations, cash flows or prospects, including, but not limited to: (i) contraction in credit markets could impact the cost and availability

of financing and the Company's overall liquidity; (ii) the volatility of copper, gold and other metal prices would impact the Company's revenues, profits, losses and cash flow; (iii) recessionary pressures could adversely impact demand for Ero's production; (iv) volatile energy, commodity and consumables prices and currency exchange rates could impact Ero's production costs; and, (v) the devaluation and volatility of global stock markets could impact the valuation of Ero's equity and other securities.

There is no assurance of a sufficient liquid trading market for the Company's Common Shares in the future

Shareholders of the Company may be unable to sell significant quantities of Common Shares into the public trading markets without a significant reduction in the price of their Common Shares, or at all. There can be no assurance that there will be sufficient liquidity of the Company's Common Shares on the trading market, and that the Company will continue to meet the listing requirements of the TSX or the NYSE or achieve listing on any other public listing exchange.

DIVIDENDS AND DISTRIBUTIONS

The Company has not, since the date of its incorporation, declared or paid any dividends or other distributions on its Common Shares, and does not currently have a policy with respect to the payment of dividends or other distributions. Pursuant to the terms of the 2023 Senior Credit Facility Agreement and the Note Indenture, other than dividends payable in shares of the Company, the Company may only declare and pay dividends on the Common Shares in an amount not exceeding US\$45,000,000 in the aggregate during any twelve-month period, provided that no default or event of default has occurred and is continuing or would occur as a result of such payment under the 2023 Senior Credit Facility Agreement. Additionally, under the Note Indenture, the Company may also declare and pay dividends provided that (a) such payment, together with all other Restricted Payments (as defined in the Note Indenture) does not exceed the greater of US\$60,000,000 and 10% of Total Assets (as defined in the Note Indenture) or (b) the Leverage Ratio (as defined in the Note Indenture) does not exceed 1.00:1.00 on a *pro forma* basis after giving effect to such payment provided that, in each case, no default or event of default has occurred and is continuing as a result of such payment. Otherwise, the Company is currently restricted from declaring or paying dividends or distributions until the secured obligations under the 2023 Senior Credit Facility Agreement and the Note Indenture have been satisfied pursuant to the terms and conditions set out in the 2023 Senior Credit Facility Agreement or the Note Indenture, as applicable.

The declaration and payment of any dividends in the future is at the discretion of the Board and will depend on numerous factors, including compliance with applicable laws, financial performance, contractual restrictions (as noted above), working capital requirements of the Company and its subsidiaries and such other factors as the Board considers appropriate. See "*Risk Factors*".

DESCRIPTION OF CAPITAL STRUCTURE

Common Shares

The Company's authorized share capital consists of an unlimited number of Common Shares without par value. As at March 6, 2025, there are 103,571,507 Common Shares issued and outstanding, 1,674,865 Common Shares issuable pursuant to outstanding options of the Company to purchase Common Shares ("**Options**") pursuant to the amended and restated stock option plan of the Company approved by the shareholders of the Company on April 26, 2023, 995,076 Common Shares issuable pursuant to outstanding performance share units of the Company ("**PSUs**") pursuant to the amended and restated share unit plan of the Company approved by the shareholders of the Company on April 26, 2023 (the "**Share Unit Plan**") and 321,890 Common Shares issuable pursuant to outstanding restricted share units of the Company ("**RSUs**") pursuant to

the Share Unit Plan. Pursuant to the Share Unit Plan, the Company has the right to redeem the aforementioned PSUs and RSUs on the applicable vesting date in cash, shares or a combination of both.

All of the Common Shares rank equally as to voting rights, participation in a distribution of the assets of the Company on a liquidation, dissolution or winding-up of the Company and entitlement to any dividends declared

by the Company. The holders of the Common Shares are entitled to receive notice of, and to attend and vote at, all meetings of shareholders (other than meetings at which only holders of another class or series of shares are entitled to vote). Each Common Share carries the right to one vote. In the event of the liquidation, dissolution or winding-up of the Company, or any other distribution of the assets of the Company among its shareholders for the purpose of winding-up its affairs, the holders of the Common Shares will be entitled to receive, on a pro rata basis, all of the assets remaining after the payment by the Company of all of its liabilities. The holders of Common Shares are entitled to receive dividends as and when declared by the Board in respect of the Common Shares on a pro rata basis. The Common Shares do not have pre-emptive rights, conversion rights or exchange rights and are not subject to redemption, retraction, purchase for cancellation or surrender provisions. There are no sinking or purchase fund provisions, no provisions permitting or restricting the issuance of additional securities or any other material restrictions, and there are no provisions which are capable of requiring a security holder to contribute additional capital. Any alteration of the rights, privileges, restrictions and conditions attaching to the Common Shares under the Company's Articles of Incorporation ("**Articles**") must be approved by at least two-thirds of the Common Shares voted at a meeting of the Company's shareholders.

Senior Unsecured Notes

On February 2, 2022, the Company completed an offering of US\$400 million aggregate principal amount of 6.50% Senior Notes due 2030 (defined herein as the "**Notes**"). The Notes will mature on February 15, 2030. The Company used a portion of the net proceeds of the offering to repay outstanding borrowings under the predecessor credit facility to the 2023 Senior Credit Facility of approximately US\$50 million and used the remaining balance for capital expenditures at the Tucumã Project and general corporate purposes.

EBP and MCSA are currently the only guarantors of the Notes on a senior unsecured basis. The Notes are direct, senior obligations of the Company, EBP and MCSA, and are not secured by any mortgage, pledge or charge. NX Gold S.A. and Ero Gold Corp. will not guarantee the Notes. The Company's subsidiaries that do not guarantee the Notes will have no obligation, contingent or otherwise, to pay amounts due under the Notes or to make any funds available to pay those amounts, whether by dividend, distribution, loan or other payment. The Notes are structurally subordinated to all indebtedness and other obligations of any non-guarantor subsidiary such that in the event of insolvency, liquidation, reorganization, dissolution or other winding up of any such subsidiary that is not a guarantor, all of such subsidiary's creditors (including trade creditors) would be entitled to payment in full out of such subsidiary's assets before the Company would be entitled to any payment in respect of its ownership interest in the subsidiary.

The Notes were issued pursuant to an indenture dated February 2, 2022, among the Company, MCSA (as guarantor) and Computershare Trust Company, N.A., as trustee ("**Note Indenture**"). Interest on the Notes started accruing from February 2, 2022 and is payable in cash semi-annually in arrears on February 15 and August 15 each year, commencing on August 15, 2022. The Note Indenture provides that upon the occurrence of specific kinds of changes of control triggering events, as defined therein, each holder of the Notes will have the right to cause the Company to repurchase some or all of its Notes at 101% of their principal amount, plus accrued and unpaid interest to, but not including, the repurchase date.

The Notes contain certain customary covenants and restrictions for a financing instrument of this type, such as transaction-based restrictive covenants that limit the Company's ability to incur additional indebtedness and make restricted payments in certain circumstances.

Credit Ratings

The following table summarizes the Company's credit ratings as at March 6, 2025:

Credit Rating Organization	Rating
Moody's Investors Service	B1 Long-Term Corporate Family Rating (CFR) B1-PD Probability of Default Rating (PDR) SGL-2 Speculative Grade Liquidity Rating B1 / Loss Given Default 4 (LGD4) assigned to the Company's Notes Stable Outlook
Fitch Ratings	B / Stable Long-Term Issuer Default Rating to (IDR) Ero Copper B rating / recovery rating 4 (RR4) assigned to the Company's Notes
S&P Global Ratings	B / Stable Long-Term Issuer Credit Rating (ICR) to Ero Copper B Issue-Level Rating and 3 Recovery Rating to the Notes

Moody's

On January 24, 2022, Moody's assigned first-time ratings to Ero Copper, consisting of a "B1" long-term corporate family rating (CFR), a "B1-PD" probability of default rating (PDR), a "B1" senior unsecured rating, an "SGL-2" Speculative Grade Liquidity Rating, and a "Stable" ratings outlook, which remain unchanged as at March 6, 2025.

Moody's CFRs are long-term ratings that reflect the relative likelihood of a default on a corporate family's debt and debt-like obligations and the expected financial loss suffered in the event of default. A CFR is assigned to a corporate family as if it has a single class of debt and a single consolidated legal entity structure.

Moody's issuer and issue-level long-term credit ratings are on a rating scale that ranges from Aaa (highest quality) to C (lowest quality). Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks on the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. According to Moody's credit rating system, obligations rated 'B1' are considered speculative and are subject to high credit risk. A 'B' rating is the sixth highest of nine categories in Moody's long-term rating scale.

A PDR is a corporate family-level opinion of the relative likelihood that any entity within a corporate family will default on one or more of its long-term debt obligations. Moody's assigns a PDR to corporate families of Aaa-PD (highest quality, subject to the lowest level of default risk) to D-PD (in default on all long-term obligations). In most cases, the PDR assigned to an issuer will align with the CFR assigned by Moody's.

Moody's Speculative Grade Liquidity ("SGL") Ratings are opinions of an issuer's relative ability to generate cash from internal resources and the availability of external sources of committed financing, in relation to its cash obligations over the coming 12 months. Speculative Grade Liquidity Ratings are assigned to speculative grade issuers based on a scale that ranges from SGL-1(very good liquidity) to SGL-4 (weak liquidity). According to Moody's SGL scale, an issuer with an SGL-2 rating possesses good liquidity and is likely to meet its obligations over the coming 12 months through internal resources but may rely on external sources of committed financing. Furthermore, an SGL-2 rated issuer's ability to access committed sources of financing is highly likely based on Moody's evaluation of near-term covenant compliance.

Fitch

On January 24, 2022, Fitch assigned a first-time rating to Ero Copper, consisting of a “B” long-term issuer default rating, with a “Stable” outlook, as well as a “B” rating and a recover rating of 4 (RR4) to the Company’s Notes, which remain unchanged as at March 6, 2025.

Fitch publishes credit ratings that are forward-looking opinions on the relative ability of an entity or obligation to meet financial commitments. Issuer default ratings (IDRs) are assigned to corporations, sovereign entities, financial institutions such as banks, leasing companies and insurers, and public finance entities (local and regional governments). Issue-level ratings are also assigned and often include an expectation of recovery, which may be notched above or below the issuer-level rating. Issue ratings are assigned to secured and unsecured debt securities, loans, preferred stock and other instruments.

Fitch’s credit rating scale for issuers and issues is expressed using the categories ‘AAA’ to ‘BBB’ (investment grade) and ‘BB’ to ‘D’ (speculative grade) with an additional +/- for ‘AA’ through ‘CCC’ levels, indicating relative differences of probability of default or recovery for issues. Investment-grade categories indicate relatively low to moderate credit risk, while ratings in the speculative categories signal either a higher level of credit risk or that a default has already occurred. Credit ratings express risk in relative rank order, which is to say they are ordinal measures of credit risk and are not predictive of a specific frequency of default or loss.

According to Fitch’s credit rating scale, an IDR of B indicates that material default risk is present, but a limited margin of safety remains and that while financial commitments are currently being met, capacity for continued payment is vulnerable to deterioration in the business and economic environment. A RR4 rated security has characteristics consistent with instruments historically recovering 31%-50% of current principal and related interest in a default scenario.

S&P

On January 24, 2022, S&P assigned a first-time rating to Ero Copper, consisting of a “B” long-term issuer credit rating (ICR), with a “Stable” outlook, as well as a “B” issue-level rating and “3” recovery rating to the Notes, which remain unchanged as at March 6, 2025.

S&P’s ICR is a forward-looking opinion about an obligor’s overall creditworthiness, or ability to pay its financial obligations. This opinion focuses on the obligor’s capacity and willingness to meet its financial commitments as they come due. It does not apply to any specific financial obligation.

S&P’s long-term ICRs are on a scale that ranges from AAA (highest quality) to D (lowest quality). The ratings from ‘AA’ to ‘CCC’ may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the rating categories. According to S&P’s rating system, an issuer rated ‘B’ currently has the capacity to meet its financial commitments, but adverse business, financial, or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitments. A ‘B’ rating is the sixth highest of ten categories in S&P’s rating system.

Regarding the issue-level rating, S&P’s assigned ratings are based, in varying degrees, on its analysis of the following considerations: (i) likelihood of payment; (ii) nature of and provisions of the financial obligation; and (iii) protection afforded by, and relative position of, the financial obligation in the event of bankruptcy or reorganization. S&P’s issue-level ratings are similarly assigned on a scale that ranges from AAA (highest quality) to D (lowest quality), with the ratings from ‘AA’ to ‘CCC’ having plus (+) or minus (-) modifiers. According to S&P’s rating system, an issue rated ‘B’ indicates that the obligor has the capacity to meet its financial commitments on the obligation, but adverse business, financial, or economic conditions will

likely impair the obligor's capacity or willingness to meet its financial commitments on the obligation. A 'B' rating is the sixth highest of ten categories in S&P's rating system.

S&P's recovery ratings focus solely on expected recovery in the event of a payment default of a specific issue, and they utilize a numerical scale that runs from 1+ to 6. The recovery rating is not linked to, or limited by, the ICR or any other rating, and provides a specific opinion about the expected recovery. A '3' recovery rating indicates S&P's expectations of meaningful (i.e., 50%-70%) recovery in the event of default.

The credit ratings received from Moody's, Fitch and S&P are not a recommendation to buy, sell or hold securities and may be subject to revision or withdrawal at any time by any such credit rating organization. Moody's, Fitch and S&P each charged the Company a customary fee in respect of the credit ratings service they provided and will continue to charge the Company a customary annual fee in respect of such credit ratings services.

The information concerning the Company's credit ratings relates to Ero Copper's financing costs, liquidity and operations. The availability of funding options may be affected by certain factors, including the global capital market environment and outlook as well as the Company's operating and financial performance. Ero Copper's ability to access capital at attractive or reasonable terms, specifically in the debt capital markets, is materially influenced by its assigned credit ratings and ratings outlook, as determined by credit rating organizations such as Moody's, Fitch and S&P. If the Company's credit ratings or outlooks were lowered or withdrawn entirely, financing costs and future debt issuances could be unfavorably impacted. There is no assurance that any rating will remain in effect for any given period of time or that any rating will not be revised or withdrawn entirely by a rating agency in the future if, in its judgment, circumstances so warrant. Credit ratings given to Ero Copper's corporate debt may not reflect the potential impact of all risks on the value of debt instruments, including risks related to market or other factors discussed in this AIF. See also "*Risk Factors*".

MARKET FOR SECURITIES

Market

The Common Shares are listed for trading on the TSX and NYSE under the trading symbol "ERO".

Trading Price and Volume

The following table sets out information relating to the monthly trading of the Common Shares on the TSX for each of the months indicated.

Period	High (\$)	Low (\$)	Volume
January 2024	22.26	19.38	4,236,976
February 2024	23.33	18.67	7,715,727
March 2024	26.30	21.21	6,818,197
April 2024	30.12	25.09	7,751,059
May 2024	32.89	27.46	7,115,023
June 2024	30.76	25.91	5,694,618
July 2024	31.73	25.43	5,986,600
August 2024	29.95	24.63	5,332,495
September 2024	31.56	24.62	5,734,060
October 2024	30.92	25.38	5,549,437
November 2024	26.21	21.05	7,710,059
December 2024	22.15	18.38	8,202,248

The closing price of the Common Shares as quoted by the TSX on December 31, 2024, being the final trading day of 2024, was \$19.38.

Prior Sales

The following table summarizes the securities of the Company (each convertible into one Common Share) that are outstanding but not listed or quoted on a marketplace and that have been issued by the Company during the financial year ended December 31, 2024:

Date of Issue	Type of Securities	Aggregate Number Issued	Exercise Price (\$)
March 4, 2024	Options	9,553	23.53
	PSUs	7,224 ⁽¹⁾	N/A
	RSUs	3,612	N/A
September 12, 2024	Options	21,698	25.35
	PSUs	16,082 ⁽¹⁾	N/A
	RSUs	8,041	N/A
December 11, 2024	Options	442,114	20.73
	PSUs	334,486 ⁽¹⁾	N/A
	RSUs	152,251	N/A

Note:

- ⁽¹⁾ Assumes that 100% of the 7,224 PSUs granted on March 4, 2024, the 16,082 PSUs granted on September 12, 2024 and the 334,486 PSUs granted on December 11, 2024 will vest. The PSUs will vest three years from the date of grant and the actual number of PSUs that will vest may range from 0% to 200% of the number granted, subject to the satisfaction of certain performance conditions. Please refer to the Company's management information circular dated March 6, 2025 ("*Statement of Executive Compensation - Compensation Committee Decisions Relating to 2024 Compensation – Options and Share Based Awards*"), a copy of which is available for review under the Company's profile on SEDAR+ and EDGAR.

DIRECTORS AND EXECUTIVE OFFICERS

Director and Executive Officer Profiles

The following table sets forth the name of each director and executive officer of the Company as at December 31, 2024 and the date of this AIF, their province or state and country of residence, their position(s) and office(s) held with the Company, their principal occupation(s) during the preceding five years, the date they became a director of the Company, if applicable, and the number and percentage of Common Shares they beneficially own, or control or direct, directly or indirectly as at the date of this AIF. Each director's term will expire immediately prior to the next annual meeting of shareholders of the Company.

- ⁽²⁰⁾ Member of the Compensation Committee. Mr. Getz is the Chair of this committee.
- ⁽²¹⁾ Dr. Eyre also holds 4,047 Options, entitling her to acquire an additional 4,047 Common Shares.
- ⁽²²⁾ Mr. Getz also holds 20,197 Options, entitling him to acquire an additional 20,197 Common Shares.
- ⁽²³⁾ Ms. Gosselin also holds 20,197 Options, entitling her to acquire an additional 20,197 Common Shares.
- ⁽²⁴⁾ Mr. Tejani holds 21,897 Options, entitling him to acquire an additional 21,897 Common Shares.
- ⁽²⁵⁾ Mr. Wright also holds 20,197 Options, entitling him to acquire an additional 20,197 Common Shares.

Based on the disclosure available on the System for Electronic Disclosure by Insiders (SEDI), as of the date of this AIF, the current directors and executive officers of the Company, as a group, beneficially own, or control or direct, directly or indirectly, 6,375,556 Common Shares, representing approximately 6.16% of the total number of Common Shares outstanding before giving effect to the conversion of any Options, PSUs and/or RSUs held by such directors and executive officers.

Cease Trade Orders, Bankruptcies, Penalties or Sanctions

None of the Company's directors or executive officers is, as at the date hereof, or was within 10 years before the date hereof, a director, chief executive officer or chief financial officer of any company (including the Company) that (a) was subject to a cease trade order, an order similar to a cease trade order or an order that denied the relevant company access to any exemption under securities legislation, that was in effect for a period of more than 30 consecutive days (an "Order") that was issued while the director or executive officer was acting in the capacity as director, chief executive officer or chief financial officer, or (b) was subject to an Order that was issued after the director or executive officer ceased to be a director, chief executive officer or chief financial officer and which resulted from an event that occurred while that person was acting in the capacity as director, chief executive officer or chief financial officer.

None of the Company's directors or executive officers, nor, to its knowledge, any shareholder holding a sufficient number of its securities to affect materially the control of the Company (a) is, as at the date hereof, or has been within the 10 years before the date hereof, a director or executive officer of any company (including the Company) that, while that person was

acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets, or (b) has, within the 10 years before the date hereof, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of such director, executive officer or shareholder.

None of the Company's directors or executive officers, nor, to its knowledge, any shareholder holding a sufficient number of its securities to affect materially the control of the Company, has been subject to (a) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has

entered into a settlement agreement with a securities regulatory authority, or (b) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor in making an investment decision.

Conflicts of Interest

To the best of the Company's knowledge, there are no existing or potential material conflicts of interest between the Company and any of its directors or officers as of the date hereof. However, certain of the Company's directors and officers are, or may become, directors or officers of other companies with businesses which may conflict with its business. Accordingly, conflicts of interest may arise which could influence these individuals in evaluating possible acquisitions or in generally acting on the Company's behalf.

Pursuant to the BCABC, directors and officers of the Company are required to act honestly and in good faith with a view to the best interests of the Company. As required under the BCABC and the Articles:

- a director or senior officer who holds any office or possesses any property, right or interest that could result, directly or indirectly, in the creation of a duty or interest that materially conflicts with that individual's duty or interest as a director or senior officer of the Company, must promptly disclose the nature and extent of that conflict; and
- a director who holds a disclosable interest (as such term is defined under the BCABC) in a contract or transaction into which the Company has entered or proposes to enter may generally not vote on any directors' resolution to approve such contract or transaction.

Generally, as a matter of practice, directors and officers who have disclosed a material interest in any contract or transaction that the Board is considering will not take part in any Board discussion respecting that contract or transaction. If on occasion such directors do participate in the discussions, they will refrain from voting on any matters relating to matters in which they have disclosed a material interest. In appropriate cases, the Company will establish a special committee of independent directors to review a matter in which directors or officers may have a conflict.

AUDIT COMMITTEE

The Audit Committee provides assistance to the Board in fulfilling its obligations relating to the integrity of the internal financial controls and financial reporting of the Company. The external auditor of the Company reports directly to the Audit Committee. The Audit Committee's primary duties and responsibilities include: (i) reviewing and reporting to the Board on the annual audited financial statements (including the auditor's report thereon) and unaudited interim financial statements and any related management's discussion and analysis, and other financial disclosure related thereto that may be required to be reviewed by the Audit Committee pursuant to applicable legal and regulatory requirements; (ii) reviewing material changes in accounting policies and significant changes in accounting practices and their impact on the financial statements; (iii) overseeing the audit function, including engaging in required discussions with the Company's external auditor and reviewing a summary of the annual audit plan at least annually, overseeing the independence of the Company's external auditor, overseeing the Company's internal auditor, and pre-approving any non-audit services to the Company; (iv) reviewing and discussing with management the appointment of key financial executives and recommending qualified candidates to the Board; (v) reviewing with management and the Company's external auditor, at least annually, the integrity of the internal controls over financial reporting and disclosure, including the effectiveness of, or weaknesses or deficiencies in: the design or operation of the Company's internal controls (including computerized information system controls and security); the overall control environment for managing business risks; and accounting, financial and disclosure controls (including, without

limitation, controls over financial reporting), non-financial controls, and legal and regulatory controls and the impact of any identified weaknesses in internal controls on management's conclusions; (vi) reviewing management reports related to legal or compliance matters that may have a material impact on the Company and the effectiveness of the Company's compliance policies; and, (vii) establishing whistleblowing procedures and investigating any complaints or

concerns it deems necessary. The full text of the Audit Committee mandate is attached to this AIF as Appendix "A".

Composition of the Audit Committee

The Audit Committee is comprised of Jill Angevine (Chair), Lyle Braaten, Faheem Tejani and John Wright , all of whom are independent directors and financially literate, in each case within the meaning of National Instrument 52-110, *Audit Committees* and under the criteria of Rule 10A-3 of the Securities Exchange Act of 1934, as amended, as required by the NYSE. In addition to being independent directors as described above, each member of the Audit Committee meets an additional "independence" test under NI 52-110 in that (i) they do not accept, directly or indirectly, any consulting, advisory or other compensatory fees from the Company or any of its subsidiaries, other than as remuneration for acting in their capacity as a member of the Board or any committee of the Board; and (ii) they are not affiliated with the Company or any of its subsidiaries.

Ms. Angevine and Mr. Tejani are each an audit committee financial expert, as that term is defined in General Instruction B(8)(b) of Form 40-F. The U.S. Securities and Exchange Commission has indicated that the designation of a person as an audit committee financial expert does not make such person an "expert" for any purpose, does not impose on such person any duties, obligations or liability that are greater than those imposed on such person as a member of the Audit Committee and the Board in the absence of such designation, and does not affect the duties, obligations or liability of any other member of the Audit Committee or Board.

Relevant Education and Experience

Each of the members of the Audit Committee has extensive education and experience relevant to the performance of their responsibilities as members of the Audit Committee.

Jill Angevine graduated with a Bachelor of Commerce degree for the University of Calgary in 1989 and has been a Chartered Professional Accountant (CPA, CA) since 1991, a Chartered Financial Analyst (CFA) since 1998, and completed the Institute of Corporate Directors program in 2014. Ms. Angevine is a finance professional with more than 25 years of experience in the investment management industry including portfolio management, capital markets and equity research. She currently serves as President and Chief Executive Officer of Brownstone Asset Management, a private investment management firm. She is a director and member of the audit committee of Advantage Energy Ltd., Grey Wolf Animal Health Corp. (Chair of the audit committee) and Tourmaline Oil Corp. (Chair of the audit committee). She formerly served as a director and member of the audit committee of Chinook Energy Inc. from 2014 to 2020. Ms. Angevine has over 11 years of experience in audit committee positions.

Lyle Braaten graduated with a B.Sc. from the University of Calgary in 1986 and an LL.B. from the University of British Columbia in 1989. Mr. Braaten is a lawyer and a member of the Law Societies of British Columbia and the Yukon. He is also the the President of Lumina Metals Corp., a private company involved in mineral exploration in Poland, the Vice President, Legal Counsel and a director of Lumina Gold Corp. (both, Lumina Group companies), and the CEO of Ex Gold Corp., a private company involved in mineral exploration in Brazil. Mr. Braaten joined the Lumina Group in 2008 and assisted in the creation of Magma Energy Corp., a renewable energy company focused on international geothermal energy development. In 2011, Magma and Plutonic Power merged to create Alterra Power Corp., which was acquired by Innergex Renewable Energy in 2018. Prior to joining Magma, he was involved in the management of a mid-sized law firm and served as its Managing Director from 2001 to 2008 with overall responsibility for the oversight of the firm's financial results and reporting. He has been an audit committee member of Lumina Gold Corp. since July 2014 and has over 10 years of experience in audit committee positions.

Faheem Tejani graduated with a Bachelor of Arts (Honours) degree from the University of Western Ontario in 1996 and has been a Chartered Professional Accountant since 2000. Mr. Tejani is a financial professional with 25 years of experience in capital markets, corporate finance, and mergers and acquisitions. He currently serves as President of Capital Asset Lending, one of the largest private mortgage administrators of non-traditional

residential mortgages in Canada. Prior to this, he dedicated over 17 years of his career to BMO Capital Markets, culminating his tenure as Managing Director in the Equity Capital Markets division, with a focus on the mining and metals sector. Before joining BMO Capital Markets, he worked at KPMG LLP. Mr. Tejani formerly served as a director and a member of the audit committee of Pretium Resources Inc. from May 2018 to March 2022 and has over 6 years of experience in audit committee positions.

John Wright was a co-founder, and former director, President and Chief Operating Officer of Pan American Silver Corp. Mr. Wright was also the co-founder of Equinox Resources. Previously, he spent 10 years with Teck Cominco where he worked at the Trail Smelter operations and later participated in the management of the feasibility studies, marketing and mine construction at the Afton, Highmont, Bull Moose and David Bell Mines. Mr. Wright is a former director of SilverCrest Metals Inc., Luminex Resources Corp., Bitterroot Resources Ltd., Lumina Copper Corp., Northern Peru Copper Corp., Global Copper Corp. and Regalito Copper Corp. Mr. Wright has been involved in multiple asset purchases and sales and the accounting associated therewith. Mr. Wright formerly served as an audit committee member of Luminex Resources Corp., Northern Peru Copper Corp. and Regalito Copper Corp. and has over 13 years of experience in audit committee positions. Mr. Wright has a P.Eng. (retired) designation from the Association of Professional Engineers and Geoscientists of British Columbia.

Pre-Approval Policies and Procedures

The Audit Committee mandate requires that the Audit Committee pre-approve any retainer of the auditor of the Company to provide any non-audit services to the Company that it deems advisable in accordance with applicable legal and regulatory requirements and policies and procedures of the Board. The Audit Committee is permitted to delegate pre-approval authority to one of its members; however, the decision of any member of the Audit Committee to whom such authority has been delegated must be presented to the full Audit Committee at its next scheduled meeting.

External Auditor Service Fees

The following table discloses the aggregate fees billed to the Company and its subsidiaries by its external auditors, KPMG LLP, Chartered Professional Accountants (“KPMG”), in the financial years ended December 31, 2024 and 2023:

Financial Year End	Audit Fees ⁽¹⁾	Audit Related Fees	Tax Fees	All Other Fees
December 31, 2024	US\$948,123	Nil	Nil	Nil
December 31, 2023	US\$907,504	Nil	Nil	Nil

Note:

- ⁽¹⁾ The aggregate fees billed for the audit of the annual consolidated financial statements of the Company, quarterly interim review of the Company and of its Brazilian subsidiaries, statutory audits of the Company's Brazilian subsidiaries and for services rendered in connection with offering memoranda and Registration Statements.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

To the Company's knowledge, there are no legal proceedings material to the Company to which it is a party, or has been a party to, or of which any of its property is the subject matter of, or was the subject matter of, since the beginning of the financial year ended December 31, 2024, and no such proceedings or actions are known by the Company to be contemplated.

There have been no penalties or sanctions imposed against the Company by a court relating to securities legislation or by a securities regulatory authority during the financial year ended December 31, 2024 or other penalties or sanctions imposed by a court or regulatory body against the Company since incorporation that would likely be considered important to a reasonable investor in making an investment decision, and the

Company has not entered into any settlement agreements before a court relating to securities legislation or with a securities regulatory authority during the financial year ended December 31, 2024.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed elsewhere herein, no director or executive officer of the Company or any of its subsidiaries or any person or company that beneficially owns, or controls or directs, directly or indirectly, more than 10 percent of the outstanding Common Shares, or any of their respective associates or affiliates, has or has had any material interest, direct or indirect, in any transaction within the three most recently completed financial years or during the current financial year that has materially affected or is reasonably expected to materially affect the Company or any of its subsidiaries.

AUDITORS, TRANSFER AGENT AND REGISTRAR

The Company's auditors are KPMG LLP, Chartered Professional Accountants, having an address at Suite 1100 – 777 Dunsmuir Street, PO Box 10426 Pacific Centre, Vancouver, British Columbia, Canada V7Y 1K3.

The transfer agent and registrar for the Common Shares in Canada is Computershare Investor Services Inc., having an address at 510 Burrard Street, 3rd Floor, Vancouver, British Columbia V6C 3B9. The transfer co-agent and registrar for the Common Shares in the United States of America is Computershare Trust Company, N.A., having an address at 150 Royall Street, Canton, Massachusetts 02021, United States of America. The registrar and trustee for the Notes is Computershare Trust Company, N.A., having an address at 1505 Energy Park Drive, St. Paul, MN, 55108, United States of America.

MATERIAL CONTRACTS

Except for material contracts entered into in the ordinary course of business, set out below are material contracts to which the Company or any of its subsidiaries are a party, entered into prior to or since the date of incorporation of the Company and which still remain in effect and material to the Company. Copies of such material contracts are available for review under the Company's profile on SEDAR+ at www.sedarplus.ca/landingpage/ or EDGAR at www.sec.gov.

- The Note Indenture referred to under the heading "*Description of Capital Structure – Senior Unsecured Notes*".
- The 2023 Senior Credit Facility Agreement, as amended on November 2, 2023 and December 13, 2024, referred to under the heading "*General Development and Business of the Company – Three Year History*".
- The Non-Priced Copper Prepayment Facility Agreement referred to under the heading "*General Development and Business of the Company – Three Year History*".
- On June 29, 2021, the Company entered into a Precious Metals Purchase Agreement (the "**NX Gold Stream Agreement**") with RGLD Gold AG ("**RG AG**"), a wholly owned subsidiary of Royal Gold, Inc., wherein the Company received total upfront cash consideration of US\$100 million from RG AG in exchange for an amount equivalent to 25% of gold produced from the Xavantina Operations until 93,000 ounces of gold have been delivered, decreasing to 10% of gold produced over the remaining life of mine. RG AG will make ongoing payments equal to 20% of the prevailing spot gold price for each ounce of gold delivered until 49,000 ounces of gold have been received, after which it will pay 40% of the prevailing spot gold price for each ounce of gold delivered. An additional amount of up to US\$10 million will be payable to the Company subject to certain performance conditions related to planned exploration drilling and increases to the Measured and Indicated Mineral Resources of the Xavantina Operations. RG AG shall also commit US\$5 per ounce of gold delivered under the NX Gold Stream Agreement to support

the Company's environmental, social and governance commitments for the Xavantina Operations and surrounding communities.

INTEREST OF EXPERTS

The following persons and companies have prepared or certified a statement, report, valuation or opinion on behalf of the Company during the twelve months ended December 31, 2024, and to the date of this AIF:

- (a) Porfirio Cabaleiro Rodriguez, FAIG, Bernardo Horta de Cerqueira Viana, FAIG, Fábio Valério Câmara Xavier, MAIG and Ednie Rafael Moreira de Carvalho Fernandes, MAIG, all of GE21, Dr. Beck Nader, FAIG of BNA and Alejandro Sepulveda, Registered Member (#0293) (Chilean Mining Commission) of NCL, who are “qualified persons” and “independent” of the Company within the meanings of NI 43-101, prepared the Caraíba Operations Technical Report in accordance with NI 43-101 and also reviewed and approved the scientific and technical information relating to the Caraíba Operations contained in this AIF other than the information of a scientific and technical nature in respect of the Caraíba Operations set out under the heading “*Caraíba Operations – Updated Information with respect to the Caraíba Operations*”.
- (b) Porfirio Cabaleiro Rodriguez, FAIG, Leonardo de Moraes Soares, MAIG and Guilherme Gomides Ferreira, MAIG, all of GE21, who are “qualified persons” and “independent” of the Company within the meanings of NI 43-101, prepared the Xavantina Operations Technical Report in accordance with NI 43-101 and also reviewed and approved the scientific and technical information relating to the Xavantina Operations contained in this AIF, other than the information of a scientific and technical nature in respect of the Xavantina Operations set out under the heading “*Xavantina Operations – Updated Information with respect to the Xavantina Operations*”.
- (c) Kevin Murray, P. Eng. and Scott C. Elfen, P.E. of Ausenco and Carlos Guzmán, FAusIMM RM CMC of NCL, who are “qualified persons” and “independent” of the Company within the meanings of NI 43-101, Erin L. Patterson, P.E. (no longer employed by Ausenco), who was a “qualified person” and independent” of the Company within the meanings of NI 43-101 as at the date of the report, and Emerson Ricardo Re, MSc, MBA, MAusIMM (CP) (No. 305892), Registered Member (No. 0138) (Chilean Mining Commission) and Resource Manager of the Company as at the date of the report (now at HCM) who is a “qualified person” within the meanings of NI 43-101, prepared the Tucumã Project Technical Report in accordance with NI 43-101 and also reviewed and approved the scientific and technical information relating to the Tucumã Project Technical Report contained in this AIF, other than the information of a scientific and technical nature in respect of the Tucumã Operations set out under the heading “*Tucumã Operations – Updated Information with respect to the Tucumã Operations*”. As Resource Management of the Company on the date of the report (now of HCM), Mr. Re is not “independent” of the Company within the meaning of NI 43-101.
- (d) Anderson Gonçalves Candido, FAusIMM of RPM Global Canada Limited prepared the report entitled “Furnas Copper Project - Pará State, Brazil – NI 43-101 Mineral Resource Estimate Technical Report” dated November 18, 2024 with an effective date of June 30, 2024 (the “**Furnas Project Technical Report**”). Mr. Candido is a “qualified persons” and “independent” of the Company within the meanings of NI 43-101.
- (e) Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148) and Resource Manager of the Company, who is a “qualified person” within the meaning of NI 43-101, has supervised the preparation of and approved the information of a scientific and technical nature in respect of: (i) the Caraíba Operations set out in the AIF under the heading “*Caraíba Operations – Update Information with respect to the Caraíba Operations*”; (ii) the Xavantina Operations set out under the heading “*Xavantina Operations – Update Information with respect to the Xavantina Operations*”; and, (iii) the Tucumã Operations set out under the heading “*Tucumã Operations – Update Information with respect to the Tucumã Operations*”. As Resource Management of the Company, Mr. Filho is not “independent” of the Company within the meaning of NI 43-101.

The aforementioned companies and persons beneficially owned, or controlled or directed, directly or indirectly, either less than one percent or no securities of the Company or of any associate or affiliate of the Company when

they prepared the reports and statements referred to, or following the preparation of the reports and statements, and did not receive any direct or indirect interest in any securities of the Company or of any associate or affiliate of the Company in connection with the preparation of such reports and statements, other than Mr. Re, who was employed by the Company as Resource Manager until April 30, 2022 (now of HCM) and still holds 621 Options as at the date of this AIF and Mr. Filho, who has been employed by the Company as Resource Manager since 2023 and holds 6,549 Options, 4,924 PSUs and 1,991 RSUs as at the date of this AIF.

KPMG LLP are the auditors of the Company and have issued an audit opinion on the consolidated financial statements of the Company for each of the years ended December 31, 2024 and December 31, 2023. KPMG LLP have confirmed with respect to the Company that they are independent within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulations and also that they are independent accountants with respect to the Company under all relevant US professional and regulatory standards.

None of the aforementioned firms or persons, nor any directors, officers or employees of such firms, are currently, or are expected to be elected, appointed or employed as, a director, officer or employee of the Company or of any associate or affiliate of the Company, other than Mr. Filho who is the Resource Manager of the Company.

**APPENDIX “A”
ERO COPPER CORP.
AUDIT COMMITTEE MANDATE**

1. Introduction

The Audit Committee (the “**Committee**” or the “**Audit Committee**”) of Ero Copper Corp. (“**Ero**” or the “**Company**”) is a committee of the Board of Directors (the “**Board**”) of the Company. The Committee shall oversee the accounting and financial reporting practices of the Company and the audits of the Company’s financial statements and exercise the responsibilities and duties set out in this Mandate.

2. Membership

Number of Members

The Committee shall be composed of three or more members of the Board.

Independence of Members

Each member of the Committee must be independent in accordance with applicable law and the applicable rules and regulations of the Canadian Securities Administrators, the United States Securities and Exchange Commission, the New York Stock Exchange and any other regulator or authority having jurisdiction over the Company from time to time (the “**Applicable Requirements**”).

Chair

At the time of the annual appointment of the members of the Audit Committee, the Board shall appoint a Chair of the Audit Committee. The Chair shall be a member of the Audit Committee, preside over all Audit Committee meetings, coordinate the Audit Committee’s compliance with this Mandate, work with management to develop the Audit Committee’s annual work-plan and provide reports of the Audit Committee to the Board.

Financial Literacy of Members

At the time of his or her appointment to the Committee, each member of the Committee shall have, or shall acquire within a reasonable time following appointment to the Committee, the financial literacy and such accounting or financial management expertise as is required to comply with the Applicable Requirements.

Term of Members

The members of the Committee shall be appointed annually by the Board. Each member of the Committee shall serve at the pleasure of the Board until the member resigns, is removed, or ceases to be a member of the Board. Unless a Chair is elected by the Board, the members of the Committee may designate a Chair by majority vote of the full Committee membership.

3. Meetings

Number of Meetings

The Committee may meet as many times per year as necessary to carry out its responsibilities.

Quorum

No business may be transacted by the Committee at a meeting unless a quorum of the Committee is present. A majority of members of the Committee shall constitute a quorum.

A-1

Calling of Meetings

The Chair, any member of the Audit Committee, the external auditors, the Chairman of the Board, the Chief Executive Officer or the Chief Financial Officer may call a meeting of the Audit Committee by notifying the Company's Corporate Secretary who will notify the members of the Audit Committee. The Chair shall chair all Audit Committee meetings that he or she attends, and in the absence of the Chair, the members of the Audit Committee present may appoint a chair from their number for a meeting.

Minutes; Reporting to the Board

The Committee shall maintain minutes or other records of meetings and activities of the Committee in sufficient detail to convey the substance of all discussions held. Upon approval of the minutes by the Committee, the minutes shall be circulated to the members of the Board. However, the Chair may report orally to the Board on any matter in his or her view requiring the immediate attention of the Board.

Attendance of Non-Members

The external auditors are entitled to attend and be heard at each Audit Committee meeting. In addition, the Committee may invite to a meeting any officers or employees of the Company, legal counsel, advisors and other persons whose attendance it considers necessary or desirable in order to carry out its responsibilities. At least once per year, the Committee shall meet with the internal auditor and management in separate sessions to discuss any matters that the Committee or such individuals consider appropriate.

Meetings without Management

The Committee shall hold unscheduled or regularly scheduled meetings, or portions of meetings, at which management is not present.

Procedure

The procedures for calling, holding, conducting and adjourning meetings of the Committee shall be the same as those applicable to meetings of the Board.

Access to Management

The Committee shall have unrestricted access to the Company's management and employees and the books and records of the Company.

4. Duties and Responsibilities

The Committee shall have the functions and responsibilities set out below as well as any other functions that are specifically delegated to the Committee by the Board and that the Board is authorized to delegate by applicable laws and regulations. In addition to these functions and responsibilities, the Committee shall perform the duties required of an audit committee by any Applicable Requirements).

Financial Reports

(a) General

The Audit Committee is responsible for overseeing the Company's financial statements and financial disclosures. Management is responsible for the preparation, presentation and integrity of the Company's financial statements and financial disclosures and for the appropriateness of the accounting principles and the reporting policies used by the Company. The auditors are responsible for auditing the Company's annual consolidated financial statements and for reviewing the Company's unaudited interim financial statements.

(b) Review of Annual Financial Reports

The Audit Committee shall review the annual consolidated audited financial statements of the Company, the auditors' report thereon and the related management's discussion and analysis of the Company's financial condition and results of operation ("MD&A"). After completing its review, if advisable, the Audit Committee shall approve and recommend for Board approval the annual financial statements and the related MD&A.

(c) Review of Interim Financial Reports

The Audit Committee shall review the interim consolidated financial statements of the Company, the auditors' review report thereon and the related MD&A. After completing its review, if advisable, the Audit Committee shall approve and recommend for Board approval the interim financial statements and the related MD&A.

(d) Review Considerations

In conducting its review of the annual financial statements or the interim financial statements, the Audit Committee shall:

- (i) meet with management and the auditors to discuss the financial statements and MD&A;
- (ii) review the disclosures in the financial statements;
- (iii) review the audit report or review report prepared by the auditors;
- (iv) discuss with management, the auditors, and internal legal counsel (if any), as requested, any litigation claim or other contingency that could have a material effect on the financial statements;
- (v) review the accounting policies followed and critical accounting and other significant estimates and judgements underlying the financial statements as presented by management;
- (vi) review any material effects of regulatory accounting initiatives or off-balance sheet structures on the financial statements as presented by management, including requirements relating to complex or unusual transactions, significant changes to accounting principles and alternative treatments under Canadian GAAP;
- (vii) review any material changes in accounting policies and any significant changes in accounting practices and their impact on the financial statements as presented by management;
- (viii) review management's report on the effectiveness of internal controls over financial reporting;
- (ix) review the factors identified by management as factors that may affect future financial results;
- (x) review results of the Company's audit committee whistleblower hotline program; and
- (xi) review any other matters, related to the financial statements, that are brought forward by the auditors, management or which are required to be communicated to the Audit Committee under accounting policies, auditing standards or Applicable Requirements.

(e) Approval of Other Financial Disclosures

The Audit Committee shall review and, if advisable, approve and recommend for Board approval financial disclosure in a prospectus or other securities offering document of the Company, press releases disclosing, or based upon, financial results of the Company and any other material financial disclosure, including financial guidance provided to analysts, rating agencies or otherwise publicly disseminated.

Auditors

(a) General

The Audit Committee shall be responsible for oversight of the work of the auditors, including the auditors' work in preparing or issuing an audit report, performing other audit, review or attest services or any other related work.

(b) Nomination and Compensation

The Audit Committee shall review and, if advisable, select and recommend for Board approval the external auditors to be nominated and the compensation of such external auditor. The Audit Committee shall have ultimate authority to approve all audit engagement terms and fees, including the auditors' audit plan.

(c) Resolution of Disagreements

The Audit Committee shall resolve any disagreements between management and the auditors as to financial reporting matters brought to its attention.

(d) Discussions with Auditors

At least annually, the Audit Committee shall discuss with the auditors such matters as are required by applicable auditing standards to be discussed by the auditors with the Audit Committee.

(e) Audit Plan

At least annually, the Audit Committee shall review a summary of the auditors' annual audit plan. The Audit Committee shall consider and review with the auditors any material changes to the scope of the plan.

(f) Quarterly Review Report

The Audit Committee shall review a report prepared by the auditors in respect of each of the interim financial statements of the Company.

(g) Independence of Auditors

At least annually, and before the auditors issue their report on the annual financial statements, the Audit Committee shall obtain from the auditors a formal written statement describing all relationships between the auditors and the Company; discuss with the auditors any disclosed relationships or services that may affect the objectivity and independence of the auditors; and obtain written confirmation from the auditors that they are objective and independent within the meaning of the applicable Rules of Professional Conduct/Code of Ethics adopted by the provincial institute or order of chartered professional accountants to which the auditors belong and other Applicable Requirements. The Audit Committee shall take appropriate action to oversee the independence of the auditors.

(h) Evaluation and Rotation of Lead Partner

At least annually, the Audit Committee shall review the qualifications and performance of the lead partner(s) of the auditors and determine whether it is appropriate to adopt or continue a policy of rotating lead partners of the external auditors.

(i) Requirement for Pre-Approval of Non-Audit Services

The Audit Committee shall approve in advance any retainer of the auditors to perform any non-audit service to the Company that it deems advisable in accordance with Applicable Requirements and Board approved policies and procedures. The Audit Committee may delegate pre-approval authority to a member of the Audit Committee. The decisions of any member of the Audit Committee to whom this authority has been delegated must be presented to the full Audit Committee at its next scheduled Audit Committee meeting.

(j) Approval of Hiring Policies

The Audit Committee shall review and approve the Company's hiring policies regarding partners, employees and former partners and employees of the present and former external auditors of the Company.

(k) Communication with Internal Auditor

The internal auditor shall report regularly to the Committee. The Committee shall review with the internal auditor any problem or difficulty the internal auditor may have encountered including, without limitation, any restrictions on the scope of activities or access to required information, and any significant reports to management prepared by the internal auditing department and management's responses thereto.

The Committee shall periodically review and approve the mandate, plan, budget and staffing of the internal audit department. The Committee shall direct management to make changes it deems advisable in respect of the internal audit function.

The Committee shall review the appointment, performance and replacement of the senior internal auditing executive and the activities, organization structure and qualifications of the persons responsible for the internal audit function.

(l) Financial Executives

The Committee shall review and discuss with management the appointment of key financial executives and recommend qualified candidates to the Board, as appropriate.

Internal Controls

(a) General

The Audit Committee shall review the Company's system of internal controls.

(b) Establishment, Review and Approval

The Audit Committee shall require management to implement and maintain appropriate systems of internal controls in accordance with Applicable Requirements, including internal controls over financial reporting and disclosure and to review, evaluate and approve these procedures. At least annually, the Audit Committee shall consider and review with management and the auditors:

- (i) the effectiveness of, or weaknesses or deficiencies in: the design or operation of the Company's internal controls (including computerized information system controls and security); the overall control environment for managing business risks; and accounting, financial and disclosure controls (including, without limitation,

controls over financial reporting), non-financial controls, and legal and regulatory controls and the impact of any identified weaknesses in internal controls on management's conclusions;

- (ii) any significant changes in internal controls over financial reporting that are disclosed, or considered for disclosure, including those in the Company's periodic regulatory filings;

- (iii) any material issues raised by any inquiry or investigation by the Company's regulators;
- (iv) the Company's fraud prevention and detection program, including deficiencies in internal controls that may impact the integrity of financial information, or may expose the Company to other significant internal or external fraud losses and the extent of those losses and any disciplinary action in respect of fraud taken against management or other employees who have a significant role in financial reporting; and
- (v) any related significant issues and recommendations of the auditors together with management's responses thereto, including the timetable for implementation of recommendations to correct weaknesses in internal controls over financial reporting and disclosure controls.

Compliance with Legal and Regulatory Requirements

The Audit Committee shall review reports from the Company's management members on: legal or compliance matters that may have a material impact on the Company; the effectiveness of the Company's compliance policies; and any material communications received from regulators. The Audit Committee shall review management's evaluation of and representations relating to compliance with specific applicable law and guidance, and management's plans to remediate any deficiencies identified.

Audit Committee Hotline Whistleblower Procedures

The Audit Committee shall establish procedures for (a) the receipt, retention, and treatment of complaints received by the Company regarding accounting, internal accounting controls, or auditing matters; and (b) the confidential, anonymous submission by employees of the Company of concerns regarding questionable accounting or auditing matters. Any such complaints or concerns that are received shall be reviewed by the Audit Committee and, if the Audit Committee determines that the matter requires further investigation, it will direct the Chair of the Audit Committee to engage outside advisors, as necessary or appropriate, to investigate the matter and will work with management and the general counsel to reach a satisfactory conclusion.

Audit Committee Disclosure

The Audit Committee shall prepare, review and approve any audit committee disclosures required by Applicable Requirements in the Company's disclosure documents.

Delegation

The Audit Committee may, to the extent permissible by Applicable Requirements, designate a sub-committee to review any matter within this mandate as the Audit Committee deems appropriate.

5. Independent Advisors

The Audit Committee shall have the authority to retain external legal counsel, consultants or other advisors to assist it in fulfilling its responsibilities and to set and pay the respective compensation for these advisers without consulting or obtaining the approval of the Board or any Company officer. The Company shall provide appropriate funding, as determined by the Audit Committee, for the services of these advisors.

6. No Rights Created

This Mandate is a statement of broad policies and is intended as a component of the flexible governance framework within which the Audit Committee, functions. While it should be interpreted in the context of all applicable laws, regulations and listing requirements, as well as in the context of the Company's Notice of Articles and Articles, it is not intended to establish any legally binding obligations.

7. Mandate Review

The Committee shall review and update this Mandate annually, as required to ensure compliance with Applicable Requirements, and present it to the Board for approval.

MANAGEMENT'S DISCUSSION AND ANALYSIS

This Management's Discussion and Analysis ("MD&A") has been prepared as at March 6, 2025 and should be read in conjunction with the audited consolidated financial statements of Ero Copper Corp. ("Ero", the "Company", or "we") as at, and for the year ended December 31, 2024, and related notes thereto, which are prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board (the "IASB"). All references in this MD&A to "Q4 2024" and "Q4 2023" are to the three months ended December 31, 2024 and December 31, 2023, respectively, and all references to "Fiscal 2024" and "Fiscal 2023" are to the years ended December 31, 2024 and December 31, 2023, respectively. All dollar amounts are expressed in United States ("US") dollars and tabular amounts are expressed in thousands of US dollars, unless otherwise indicated. References to "\$", "US\$", "dollars", or "USD" are to US dollars, references to "C\$" are to Canadian dollars, and references to "R\$" or "BRL" are to Brazilian Reais.

This MD&A refers to various alternative performance (Non-IFRS) measures, including copper C1 cash cost, copper C1 cash cost including foreign exchange hedges, realized copper price, gold C1 cash cost, gold all-in sustaining cost ("AISC"), realized gold price, EBITDA, adjusted EBITDA, adjusted net income attributable to owners of the Company, adjusted net income per share attributable to owners of the Company, net (cash) debt, working capital and available liquidity. Please refer to the section titled "Alternative Performance (Non-IFRS) Measures" for a discussion of non-IFRS measures.

This MD&A contains "forward-looking statements" that are subject to risk factors set out in a cautionary note contained at the end of this MD&A. The Company cannot assure investors that such statements will prove to be accurate, and actual results and future, events may differ materially from those anticipated in such statements. The results for the periods presented are not necessarily indicative of the results that may be expected for any future period. Investors are cautioned not to place undue reliance on such forward-looking statements. All information contained in this MD&A is current and has been approved by the Board of Directors of the Company (the "Board") as of March 6, 2025, unless otherwise stated.

BUSINESS OVERVIEW

Ero Copper is a high-margin, high-growth copper producer with operations in Brazil and corporate headquarters in Vancouver, B.C. The Company's primary asset is a 99.6% interest in the Brazilian copper mining company, Mineração Caraíba S.A. ("MCSA"), which is the 100% owner of the Company's Caraíba Operations located in the Curaçá Valley, Bahia State, Brazil and the Tucumã Operation, an open pit copper mine located in Pará, Brazil. The Company also owns 97.6% of NX Gold S.A. ("NX Gold"), which owns the Xavantina Operations, comprised of an operating gold and silver mine located in Mato Grosso, Brazil.

Additional information on the Company and its operations, including technical reports on the Caraíba Operations, Xavantina Operations and Tucumã Operation, can be found on SEDAR+ (www.sedarplus.ca/landingpage/) and on EDGAR (www.sec.gov). The Company's shares are publicly traded on the Toronto Stock Exchange and the New York Stock Exchange under the symbol "ERO".

Fourth Quarter and Full-Year 2024 Highlights

Record quarterly copper production contributed to strong cash flow from operations for the fourth quarter and full year

- The continued ramp-up of the Tucumã Operation drove record quarterly copper production of 12,883 tonnes, contributing to full-year copper production of 40,600 tonnes in concentrate.
 - Steady ramp-up progress at the Tucumã Operation resulted in quarterly and full-year production of 4,317 tonnes and 5,156 tonnes, respectively. Mining operations continue to remain ahead of schedule.
 - The Caraíba Operations produced 8,566 tonnes of copper in concentrate at C1 cash costs⁽¹⁾ of \$1.85 per pound of copper produced during the quarter, bringing full-year production to 35,444 tonnes at C1 cash costs⁽¹⁾ of \$1.97 per pound.

- The Xavantina Operations produced 8,936 ounces of gold during the quarter, resulting in C1 cash costs⁽¹⁾ and AISC⁽¹⁾ of \$744 and \$1,691, respectively, per ounce of gold produced. Full-year gold production was 57,210 ounces at C1 cash costs⁽¹⁾ and AISC⁽¹⁾ of \$493 and \$1,006, respectively, per ounce.

- Higher copper production partially offset the impact of lower gold production during the quarter. For the full year, improved metal prices drove operating margin expansion, helping to mitigate the impact of lower copper and gold production.
 - Cash flow from operations for the quarter and year were \$60.8 million and \$145.4 million, respectively.
 - Fourth quarter and full-year adjusted EBITDA⁽¹⁾ were \$59.1 million and \$216.2 million, respectively.
 - Net loss attributable to the owners of the Company for the quarter and year were of \$48.9 million (\$0.47 per share on a diluted basis) and \$68.5 million (\$0.66 per share on a diluted basis), respectively.
 - Adjusted net income attributable to the owners of the Company⁽¹⁾ for the quarter and year were \$17.4 million (\$0.17 per share on a diluted basis) and \$80.4 million (\$0.78 per share on a diluted basis), respectively.
- At year-end, available liquidity was \$90.4 million, including \$50.4 million in cash and cash equivalents, \$15.0 million of undrawn availability under the Company's senior secured revolving credit facility ("Credit Facility"), and \$25.0 million of undrawn availability under the Company's copper prepayment facility. In January 2025, the Company amended its Credit Facility to enhance financial flexibility and support its larger operational footprint. The amendment, which included an increase in aggregate commitments from \$150 million to \$200 million, added \$50 million of liquidity subsequent to year-end.

Drilling and engineering work underway on the Furnas Copper-Gold Project ("Furnas")

- The Company commenced the Phase 1 drill program in mid-October 2024, completing approximately 2,800 meters of drilling during the fourth quarter. The Company expects to complete the 28,000-meter Phase 1 drill program in mid-2025 and the majority of the 17,000-meter Phase 2 drill program by year-end 2025. These drill programs are focused on two identified high-grade zones, the NW and SE Zones, and include:
 - Infill drilling to upgrade mineral resource classifications and increase continuity within high-grade zones
 - Extensional drilling to depth, where the deposit remains open
- On October 2, 2024, the Company published an initial mineral resource estimate⁽²⁾ for Furnas, confirming the potential for a large-scale, high-grade underground mine. The Company plans to advance a preliminary economic assessment on the Project for publication in H1 2026.

(1) Please refer to the section titled "Alternative Performance (Non-IFRS) Measures" within this MD&A.

(2) For more information on the Furnas mineral resource estimate, please see the Company's press release dated October 2, 2024, and the report prepared by Anderson Gonçalves Candido, FAusIMM of RPM Global Canada Limited entitled "Furnas Copper Project - Pará State, Brazil – NI 43-101 Mineral Resource Estimate Technical Report" dated November 18, 2024 with an effective date of June 30, 2024)

Subsequent Events

Amendment to the Credit Facility

In January 2025, the Company enhanced financial flexibility by amending its Credit Facility to support its larger operational footprint. Key updates to the Credit Facility include:

- An increase in aggregate commitments from \$150 million to \$200 million.
- An extension of the maturity date from December 2026 to December 2028.
- Improved terms, including a 25-basis point reduction to the applicable margin on drawn funds at certain leverage ratios.

Executive Succession and Leadership Structure Update

As part of the Company's ongoing leadership succession planning, key executive transitions took effect on January 1, 2025.

- David Strang, co-founder and former Chief Executive Officer, was appointed Executive Chairman of the Board, following the retirement of Noel Dunn, co-founder and Chairman.
- Makko DeFilippo, formerly President and Chief Operating Officer, was appointed President and Chief Executive Officer and joined the Company's Board.
- Gelson Batista succeeded Mr. DeFilippo as Chief Operating Officer.

In parallel, Mr. DeFilippo implemented a broader leadership reorganization in February 2024 to enhance operational stability and efficiency. The new structure consolidates leadership roles to support the Company's next phase of growth.

The executive leadership team, reporting to Mr. DeFilippo, is as follows:

- Gelson Batista, Executive Vice President & Chief Operating Officer
- Wayne Drier, Executive Vice President & Chief Financial Officer
- Courtney Lynn, Executive Vice President, External Affairs & Strategy
- Deepk Hundal, Executive Vice President, General Counsel & Corporate Secretary
- Eduardo de Come, Executive Vice President, Brazil

As part of the Company's long-term succession plan, developed in 2022, Michel (Mike) Richard, a co-founder of the Company and Chief Geological Officer, will retire at the end of March 2025. He will continue to support the Company in an advisory capacity as a member of the Furnas Technical Committee and provide ongoing guidance to the exploration team which will be led by Michael Hocking, Vice President Exploration.

REVIEW OF OPERATIONS

The Caraíba Operations

	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Ore mined (tonnes)	713,980	874,937	886,271	3,274,410	3,341,121
Ore processed (tonnes)	719,942	900,289	812,202	3,431,294	3,231,667
Grade (% Cu)	1.30	1.20	1.59	1.14	1.49
Recovery (%)	91.8	91.9	91.0	90.6	91.4
Cu Production (tonnes)	8,566	9,920	11,760	35,444	43,857
Cu Production (lbs)	18,883,286	21,870,631	25,926,281	78,139,888	96,687,638
Concentrate grade (% Cu)	32.8	33.3	33.3	33.0	33.7
Concentrate sales (tonnes)	25,743	29,964	34,332	110,650	131,002
Cu Sold in concentrate (tonnes)	8,420	9,970	11,429	36,557	42,595
Cu Sold in concentrate (lbs)	18,562,541	21,980,217	25,196,731	80,593,665	93,905,643
Realized copper price	\$ 3.82	\$ 3.88	\$ 3.52	\$ 3.91	\$ 3.64
Copper C1 cash cost	\$ 1.85	\$ 1.63	\$ 1.75	\$ 1.97	\$ 1.80
Copper C1 cash cost including foreign exchange hedges	\$ 2.07	\$ 1.72	\$ 1.59	\$ 2.05	\$ 1.68

The Caraíba Operations achieved quarterly copper production of 8,566 tonnes in concentrate, bringing full-year copper production to 35,444 tonnes. Lower tonnes mined and processed resulted in an 13.6% quarter-on-quarter decrease in copper production and contributed to a 13.5% increase in C1 cash costs, which averaged \$1.85 per pound of copper produced for the quarter. For the full year, C1 cash costs and operating margins benefited from improved concentrate treatment and refining charges beginning in May 2024, as well as a more favorable USD to BRL exchange rate, resulting in weighted average full-year C1 cash costs of \$1.97 per pound of copper produced.

Tonnes of ore mined in Q4 2024 included:

- Pilar: 363,994 tonnes grading 1.51% copper (vs. 407,884 tonnes at 1.34% copper in Q3 2024)
- Vermelhos: 269,482 tonnes grading 1.31% copper (vs. 250,365 tonnes at 1.47% copper in Q3 2024)
- Surubim: 80,504 tonnes at 0.36% copper (vs. 216,688 tonnes at 0.68% copper in Q3 2024)

For the full year, tonnes of ore mined included:

- Pilar: 1,693,479 tonnes grading 1.32% copper (vs. 1,870,330 tonnes at 1.56% copper in 2023)
- Vermelhos: 975,639 tonnes grading 1.25% copper (vs. 902,643 tonnes at 1.71% copper in 2023)
- Surubim: 605,292 tonnes at 0.62% copper (vs. 568,148 tonnes at 0.72% copper in 2023)

Contributions from the three mines resulted in total ore mined during the quarter of 713,980 tonnes grading 1.30% copper (vs. 874,937 tonnes at 1.21% copper in Q3 2024). For the full year, total ore mined was 3,274,410 tonnes grading 1.17% copper (vs. 3,341,121 tonnes at 1.46% copper in 2023).

During the quarter, the Company engaged an additional development contractor to support accelerated development rates and improved operational flexibility. Mobilization of the additional contractor is expected to be complete by the end of Q1 2025.

The Caraíba Operations are expected to produce 37,500 to 42,500 tonnes of copper in concentrate in 2025, reflecting higher mill throughput volumes compared to 2024. Production is anticipated to be lowest in Q1 2025 before increasing sequentially through year-end.

The Company's full-year copper C1 cash cost guidance is \$2.15 to \$2.35 per pound of copper produced. The anticipated increase in unit costs compared to 2024 is primarily driven by longer average transport distances for ore and waste, resulting from the increased depth of planned mining activities across all three mines at the Caraíba Operations.

The Tucumã Operation

	2024 - Q4	2024 - Q3	2024
Ore mined (tonnes)	1,065,108	867,315	1,932,423
Ore processed (tonnes)	223,013	110,778	333,791
Grade (% Cu)	2.17	1.00	1.78
Recovery (%)	89.1	75.7	86.6
Cu Production (tonnes)	4,317	839	5,156
Cu Production (lbs)	9,515,937	1,850,043	11,365,980
Concentrate grade (% Cu)	28.6	25.5	28.0
Concentrate sales (tonnes)	13,384	1,652	15,036
Cu Sold in concentrate (tonnes)	3,750	357	4,107
Cu Sold in concentrate (lbs)	8,268,310	787,042	9,055,352
Realized copper price	\$ 3.48	\$ 4.19	\$ 3.55

Ramp-up of the Tucumã Operation continued to deliver important progress during the quarter, despite a regional power disruption in early October (please refer to the Company's press releases dated October 5, 2024 and October 16, 2024) and challenges related to the tailings filtration circuit. Metallurgical recoveries and concentrate grades continued to remain in line with design targets, while volumes steadily increased month-over-month, driving significant improvements in both throughput and copper production during Q4 2024. Mining operations continued to progress ahead of schedule, contributing to run-of-mine stockpiles available for processing in 2025.

For the quarter, the Tucumã Operation processed 223,013 tonnes of ore producing 4,317 tonnes of copper in concentrate, bringing full-year processed volumes to 333,791 tonnes and total copper production of 5,156 tonnes in concentrate.

The Tucumã Operation is expected to produce 37,500 to 42,500 tonnes of copper in concentrate in 2025, with commercial production anticipated in H1 2025. Mill throughput and copper production are expected to be lowest in Q1 2025, increasing sequentially through year-end.

The Company's full-year copper C1 cash cost guidance is \$1.05 to \$1.25 per pound of copper produced. C1 cash costs for the Tucumã Operation will be reported following the achievement of commercial production.

The Xavantina Operations

	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Ore mined (tonnes)	26,119	41,761	34,417	146,160	135,982
Ore processed (tonnes)	26,120	41,761	34,416	146,161	136,002
Head grade (grams per tonne Au)	11.18	11.41	17.18	13.37	15.13

Gold ounces produced (oz)	8,936	13,485	16,867	57,210	59,222
Silver ounces produced (oz)	5,654	8,168	9,907	33,927	37,674
Gold sold (oz)	11,106	14,615	18,479	60,195	57,949
Silver sold (oz)	6,426	8,523	9,618	34,503	35,655
Realized gold price ⁽¹⁾	\$ 2,080	\$ 2,382	\$ 1,820	\$ 2,142	\$ 1,867
Gold C1 cash cost	\$ 744	\$ 539	\$ 413	\$ 493	\$ 422
Gold AISC	\$ 1,691	\$ 1,034	\$ 991	\$ 1,006	\$ 957

(1) Realized Au price includes the effect of ounces sold under the stream arrangement with Royal Gold. See "Realized Gold Price" section of "Non-IFRS Measures" for detail.

The Xavantina Operations delivered quarterly gold production of 8,936 ounces, bringing full-year gold production to 57,210 ounces. Operations were temporarily halted in December to complete repairs identified during a routine inspection by Brazil's National Mining Agency, impacting fourth quarter and full-year production. Consequently, quarterly C1 cash costs and AISC were \$744 and \$1,691, respectively, per ounce of gold produced, bringing full-year C1 cash costs and AISC were \$493 and \$1,006, respectively, per ounce of gold produced.

The Xavantina Operations are expected to produce 50,000 to 60,000 ounces of gold in 2025, with mill throughput volumes projected to increase and mined and processed gold grades expected to return to long-term block model averages. The Company expects production to be weighted towards H2 2025 due to higher planned mined and processed tonnage.

The Company's full-year 2025 gold C1 cash cost guidance is \$650 to \$800 per ounce of gold produced. The gold AISC guidance range for 2025 is \$1,400 to \$1,600 per ounce of gold produced.

2025 GUIDANCE

Consolidated copper production for 2025 is expected to range between 75,000 to 85,000 tonnes. The Company remains focused on steadily increasing plant throughput and achieving commercial production at the Tucumã Operation in H1 2025. As a result, copper production is expected to increase sequentially each quarter, with Tucumã expected to contribute significantly to the full-year consolidated copper production.

At the Xavantina Operations, annual gold production is expected to remain steady at 50,000 to 60,000, with mill throughput volumes projected to increase and mined and processed gold grades expected to return to long-term block model averages.

Copper C1 cash cost guidance on a consolidated basis is \$1.55 to \$1.80 per pound of copper produced. This is based on C1 cash cost guidance ranges of \$2.15 to \$2.35 per pound for the Caraíba Operations and \$1.05 to \$1.25 per pound at the Tucumã Operation.

At the Xavantina Operations, the C1 cash cost guidance range of \$650 to \$800 per ounce of gold produced reflects a planned decrease in mined and processed gold grades. The AISC guidance range for 2025 is \$1,400 to \$1,600 per ounce of gold produced.

2025 Production and Cost Guidance

Consolidated Copper Production (tonnes)

Caraíba Operations	37,500 - 42,500
Tucumã Operation	37,500 - 42,500
Total Copper	75,000 - 85,000

Consolidated Copper C1 Cash Cost⁽¹⁾ Guidance

Caraíba Operations	\$2.15 - \$2.35
Tucumã Operation	\$1.05 - \$1.25
Consolidated Copper Operations	\$1.55 - \$1.80

The Xavantina Operations

Au Production (ounces)	50,000 - 60,000
Gold C1 Cash Cost ⁽¹⁾ Guidance	\$650 - \$800
Gold AISC ⁽¹⁾ Guidance	\$1,400 - \$1,600

Note: Guidance is based on estimates and assumptions including, but not limited to, mineral reserve estimates, grade and continuity of interpreted geological formations and metallurgical recovery performance. Please refer to the Company's SEDAR+ and EDGAR filings, including the most recent Annual Information Form ("AIF"), for a detailed summary of risk factors.

(1) Please refer to the section titled "Alternative Performance (Non-IFRS) Measures" within this MD&A.

2025 Capital Expenditure Guidance

Capital expenditures are expected to decrease to a range of \$230 to \$270 million, primarily due to significantly lower capital expenditures at the Tucumã Operation following the completion of construction in 2024.

Figures presented in the table below are in USD millions.

Caraíba Operations	\$165 - \$180
Tucumã Operation ⁽¹⁾	\$30 - \$40
Xavantina Operations	\$25 - \$35
Furnas Copper-Gold Project and Other Exploration	\$10 - \$15
Total	\$230 - \$270

Note: Guidance is based on estimates and assumptions including, but not limited to, mineral reserve estimates, grade and continuity of interpreted geological formations and metallurgical recovery performance. Please refer to the Company's SEDAR+ and EDGAR filings, including the most recent Annual Information Form ("AIF"), for a detailed summary of risk factors.

(1) Excludes capitalized ramp-up costs prior to the declaration of commercial

REVIEW OF FINANCIAL RESULTS

The following table provides a summary of the financial results of the Company for Q4 2024 and Q4 2023. Tabular amounts are in thousands of US dollars, except share and per share amounts.

	Notes	Three months ended December 31,	
		2024	2023
Revenue	1	\$ 122,539	\$ 116,414
Cost of sales	2	(70,164)	(74,560)
Gross profit		52,375	41,854
Expenses			
General and administrative	3	(13,646)	(12,160)
Share-based compensation		7,496	(477)
Write-down of exploration and evaluation asset		(839)	—
Income before the undernoted		45,386	29,217
Finance income		690	1,989
Finance expense	4	(3,851)	(5,284)
Foreign exchange (loss) gain	5	(92,804)	24,871
Other expenses		(4,211)	(5,326)
(Loss) income before income taxes		(54,790)	45,467
Income tax recovery (expense)			
Current		(6,583)	(6,833)
Deferred		12,445	(1,582)
	6	5,862	(8,415)
Net (loss) income for the period		\$ (48,928)	\$ 37,052
Other comprehensive (loss) gain			
Foreign currency translation (loss) gain	7	(79,146)	26,074
Comprehensive (loss) income		\$ (128,074)	\$ 63,126
Net (loss) income per share attributable to owners of the Company			
Basic		\$ (0.47)	\$ 0.37
Diluted		\$ (0.47)	\$ 0.37
Weighted average number of common shares outstanding			
Basic		103,345,064	98,099,791
Diluted		103,345,064	98,482,755

Notes:

1. Revenues from copper sales in Q4 2024 was \$99.8 million (Q4 2023 - \$83.2 million) on sale of 26.8 million lbs of copper (Q4 2023 - 25.2 million lbs). The increase in copper revenues was primarily attributed to 28.1 million of incremental revenue from the new Tucumã Operations, higher average realized prices, partially offset by lower quantity sold at Caraíba.

Revenues from gold sales in Q4 2024 was \$22.8 million (Q4 2023 - \$33.2 million) on sale of 11,106 ounces of gold (Q4 2023 - 18,479 ounces) at an average realized price of \$2,080 per ounce (Q4 2023 - \$1,820 per ounce). The decrease in gold revenues was attributable to a decrease in sales volume, partially offset by a higher realized gold price.

2. Cost of sales for Q4 2024 from copper sales was \$56.1 million (Q4 2023 - \$60.2 million) which primarily comprised of \$15.3 million (Q4 2023 - \$17.8 million) in depreciation and depletion, \$11.5 million (Q4 2023 - \$13.7 million) in salaries and benefits, \$8.8 million (Q4 2023 - \$10.2 million) in materials and consumables, \$9.4 million (Q4 2023 - \$6.5 million) in contracted services, \$7.8 million (Q4 2023 - \$7.9 million) in maintenance costs, \$3.1 million (Q4 2023 - \$2.6 million) in sales expenses, \$2.3 million (Q4 2023 - \$2.7 million) in utilities, and \$2.4 million decrease (Q4 2023 - \$1.4 million decrease) in changes in inventories. The decrease in cost of sales in Q4 2024 as compared to Q4 2023 was primarily attributable to a 11% decrease in tonnes processed at Caraíba Operations, resulting in lower materials and consumables costs and lower depreciation and depletion, partially offset by higher contracted service costs incurred to accelerate underground mine development.

Cost of sales for Q4 2024 from gold sales was \$14.0 million (Q4 2023 - \$14.4 million) which primarily comprised of \$4.6 million (Q4 2023 - \$6.7 million) in depreciation and depletion, \$2.7 million (Q4 2023 - \$2.6 million) in salaries and benefits, \$1.8 million (Q4 2023 - \$1.6 million) in contracted services, \$1.4 million (Q4 2023 - \$1.7 million) in materials and consumables, \$0.6 million (Q4 2023 - \$0.7 million) in maintenance costs, \$0.5 million (Q4 2023 - \$0.6 million) in utilities, and \$1.9 million increase (Q4 2023 - \$0.1 million decrease) in change in inventories. The decrease in cost of sales as compared to Q4 2023 was primarily due to a decrease in gold ounces sold, resulting in lower depreciation and depletion, and lower materials and consumables costs.

3. General and administrative expenses for Q4 2024 was primarily comprised of \$8.8 million (Q4 2023 - \$5.4 million) in salaries and consulting fees, \$3.1 million (Q4 2023 - \$2.5 million) in office and administration expenses, \$0.1 million (Q4 2023 - \$2.5 million) in incentive payments, \$0.8 million (Q4 2023 - \$0.9 million) in other costs, and \$0.4 million (Q4 2023 - \$0.5 million) in accounting and legal costs. The increase in general and administrative expenses was mainly attributed to severance payments and consulting fees incurred for business development opportunities.
4. Finance expense for Q4 2024 was \$3.9 million (Q4 2023 - \$5.3 million) and is primarily comprised of other finance expense of \$2.3 million (Q4 2023 - \$3.2 million), accretion of deferred revenue of \$0.6 million (Q4 2023 - \$0.7 million), accretion of asset retirement obligations of \$0.5 million (Q4 2023 - \$0.7 million), lease interest of \$0.5 million (Q4 2023 - \$0.6 million), and interest on loans and borrowings of nil (Q4 2023 - \$0.1 million). Interest on loans and borrowings were net of \$10.3 million (Q4 2023 - \$7.0 million) in borrowing costs which were capitalized to projects in progress. The overall decrease in finance expense was attributable to an increase in capitalization of borrowing costs as a result of capital expenditures on construction projects.
5. Foreign exchange loss for Q4 2024 was \$92.8 million (Q4 2023 - \$24.9 million gain). This amount is primarily comprised of \$72.6 million (Q4 2023 - \$11.2 million gain) in foreign exchange loss on USD denominated debt at MCSA for which the functional currency is the BRL, \$15.2 million (Q4 2023 - \$9.9 million gain) of unrealized foreign exchange loss on derivative contracts, \$5.9 million (Q4 2023 - \$4.2 million gain) of realized foreign exchange loss on derivative contracts, and partially offset by other foreign exchange gains

of \$1.0 million (Q4 2023 - \$0.4 million losses). The unrealized foreign exchange loss on USD denominated debt and on derivative contracts was a result of a 12% weakening of the BRL against the USD during the period.

6. In Q4 2024, the Company recognized \$5.9 million in income tax recovery (Q4 2023 an expense of \$8.4 million). The recovery in income tax expense was primarily a result of losses before taxes as compared to income before taxes in the same quarter of the prior year.
7. The foreign currency translation loss is a result of a fluctuation of the BRL against the USD during Q4 2024, which weakened from approximately 5.45 BRL per US dollar at the beginning of Q4 2024 to approximately 6.19 BRL per US dollar by the end of the quarter, when translating the net assets of the Company's Brazilian subsidiaries to USD for presentation in the Company's consolidated financial statements.

The following table provides a summary of the financial results of the Company for Fiscal 2024, 2023 and 2022. Tabular amounts are in thousands of US dollars, except share and per share amounts.

	Notes	Year ended December 31,		
		2024	2023	2022
Revenue	1	\$ 470,259	\$ 427,480	\$ 426,392
Cost of sales	2	(289,706)	(270,635)	(239,217)
Gross profit		180,553	156,845	187,175
Expenses				
General and administrative	3	(49,598)	(52,429)	(49,459)

Weighted average number of common shares outstanding				
Basic		103,106,305	94,111,548	90,789,925
Diluted		103,106,305	94,896,334	92,170,656

Notes:

1. Revenues from copper sales in Fiscal 2024 amounted to \$343.0 million (Fiscal 2023 - \$320.6 million), reflecting the sale of 89.6 million lbs of copper compared to 93.9 million lbs of copper for Fiscal 2023. The increase in revenues was primarily due to \$31.2 million of incremental revenue from the new Tucumã Operations, higher realized copper prices, partially offset by 14% lower copper sales at Caraíba.

Revenues from gold sales in Fiscal 2024 amounted to \$127.3 million (Fiscal 2023 - \$106.9 million), reflecting the sale of 60,195 ounces of gold at a realized price of \$2,142 per ounce, compared to 57,949 ounces of gold sold at a realized price of \$1,867 per ounce in Fiscal 2023. The increase in revenues was driven by both higher sales volume and improved gold prices compared to the prior year.

2. Cost of sales for Fiscal 2024 from copper sales was \$237.3 million (Fiscal 2023 - \$224.2 million) which primarily consisted of \$65.3 million (Fiscal 2023 - \$62.0 million) in depreciation and depletion, \$51.0 million (Fiscal 2023 - \$51.4 million) in salaries and benefits, \$37.5 million (Fiscal 2023 - \$38.1 million) in materials and consumables, \$35.4 million (Fiscal 2023 - \$26.9 million) in contracted services, \$29.5 million (Fiscal 2023 - \$28.9 million) in maintenance costs, \$10.2 million (Fiscal 2023 - \$11.2 million) in utilities, and \$9.1 million (Fiscal 2023 - \$9.0 million) in sales expenses. The increase in cost of sales was primarily attributed to a 6% increase in tonnes processed, higher depreciation and depletion from an expanded depletable asset base, and increased contracted services to accelerate mine development at the Caraíba Operations.

Cost of sales for Fiscal 2024 from gold sales was \$52.4 million (Fiscal 2023- \$46.5 million) which primarily comprised of \$20.4 million (Fiscal 2023 - \$19.5 million) in depreciation and depletion, \$10.3 million (Fiscal 2023 - \$9.2 million) in salaries and benefits, \$7.6 million (Fiscal 2023 - \$6.0 million) in contracted services, \$6.7 million (Fiscal 2023 - \$6.2 million) in materials and consumables, \$2.5 million (Fiscal 2023 - \$2.1 million) in maintenance costs, and \$2.3 million (Fiscal 2023 - \$2.3 million) in utilities. The increase in cost of sales was mainly attributed to higher utilization of third party mining contractor to perform manual mining, as well as a 4% increase in gold sales, accompanied with higher depreciation and depletion.

3. General and administrative expenses for Fiscal 2024 was primarily comprised of \$28.7 million (Fiscal 2023 - \$29.3 million) in salaries and consulting fees, \$10.1 million (Fiscal 2023 - \$9.0 million) in office and administrative expenses, \$4.3 million (Fiscal 2023 - \$6.9 million) in incentive payments, \$2.9 million (Fiscal 2023 - \$3.7 million) in other general and administrative expenses, and \$1.9 million (Fiscal 2023 - \$2.0 million) in accounting and legal fees.
4. In Fiscal 2024, the Company recognized a write-down in exploration and evaluation assets of \$12.1 million (Fiscal 2023 - nil), primarily related to the termination of the Fides option agreement.
5. Finance expense for Fiscal 2024 was \$17.1 million (Fiscal 2023 - \$25.8 million) and was primarily comprised of other finance expense of \$10.4 million (Fiscal 2023 - \$7.3 million) primarily due to higher expected credit loss provision on a note receivable, accretion of deferred revenue of \$2.5 million (Fiscal 2023 - \$3.0 million), accretion of the asset retirement obligations of \$2.3 million (Fiscal 2023 - \$2.7 million), lease interest of \$1.8 million (Fiscal 2023 - \$1.5 million), and nil (Fiscal 2023 - \$11.3 million) from interest on loans and borrowings (net of capitalization of borrowing costs). During Fiscal 2024, \$36.5 million (Fiscal 2023 - \$17.0 million) in interest was capitalized to projects in progress. The overall decrease in finance expense was primarily attributable to higher interest capitalized as a result of capital expenditures incurred on various qualifying projects, partially offset by an increased interest on new loans and borrowings.

6. Foreign exchange loss for Fiscal 2024 was \$165.0 million (Fiscal 2023 - \$34.6 million gain). This amount was primarily comprised of a foreign exchange loss of \$129.4 million (Fiscal 2023 - \$18.7 million gain) on USD denominated debt in MCSA, for which the functional currency is the BRL. In addition, the Company recognized a foreign exchange loss on unrealized derivative contracts of \$30.8 million (Fiscal 2023 - \$7.6 million gain) and realized foreign exchange loss on derivative contracts of \$8.2 million (Fiscal 2023 - \$11.4 million gain), partially offset by other foreign exchange gains of \$3.4 million (Fiscal 2023 - \$3.1 million losses). The fluctuation in foreign exchange gains/losses were primarily a result of increased volatility of the USD/BRL foreign exchange rates, where the BRL weakened 19.3% against the USD during Fiscal 2024.
7. In Fiscal 2024, the Company recognized an \$7.7 million income tax recovery (Fiscal 2023 - \$18.0 million expense), The change was primarily a result of a net loss before income taxes.

8. The foreign currency translation loss is a result of fluctuations of the BRL against the USD during Fiscal 2024, which weakened from approximately 4.84 BRL per US dollar at the beginning of 2024 to approximately 6.19 BRL per US dollar by the end of the quarter, when translating the net assets of the Company's Brazilian subsidiaries to USD for presentation in the Company's consolidated financial statements.

SUMMARY OF QUARTERLY RESULTS

The following table presents selected financial information for each of the most recent eight quarters. Tabular amounts are in millions of US Dollars, except share and per share amounts.

Selected Financial Information	Dec. 31, ⁽¹⁾ 2024	Sep. 30, ⁽²⁾ 2024	Jun. 30, ⁽³⁾ 2024	Mar. 31, ⁽⁴⁾ 2024	Dec. 31, ⁽⁵⁾ 2023	Sep. 30, ⁽⁶⁾ 2023	Jun. 30, ⁽⁷⁾ 2023	Mar. 31, ⁽⁸⁾ 2023
Revenue	\$ 122.5	\$ 124.8	\$ 117.1	\$ 105.8	\$ 116.4	\$ 105.2	\$ 104.9	\$ 101.0

- Basic	\$ (0.47)	\$ 0.40	\$ (0.52)	\$ (0.07)	\$ 0.37	\$ 0.03	\$ 0.32	\$ 0.26
- Diluted	\$ (0.47)	\$ 0.39	\$ (0.52)	\$ (0.07)	\$ 0.37	\$ 0.03	\$ 0.32	\$ 0.26
Weighted average number of common shares outstanding								
- Basic	103,345,064	103,239,881	103,082,363	102,769,444	98,099,791	93,311,434	92,685,916	92,294,045
- Diluted	103,345,064	103,973,827	103,082,363	102,769,444	98,482,755	94,009,268	93,643,447	93,218,281

Notes:

- During Q4 2024, the Company recognized net loss of \$48.9 million compared to net income of \$41.4 million in the preceding quarter. The decrease in net income was primarily attributable to foreign exchange losses of \$92.8 million compared to foreign exchange gains of \$17.2 million in the preceding quarter, partially offset by income tax recovery of \$5.9 million compared to income tax expense of \$8.3 million in the preceding quarter.
- During Q3 2024, the Company recognized net income of \$41.4 million compared to net loss of \$53.4 million in the preceding quarter. The increase in net income was primarily attributable to higher revenues, as well as foreign exchange gains of \$17.2 million compared to foreign exchange losses of \$70.5 million in the preceding quarter, as well as a \$10.7 million write-down in exploration and evaluation assets recognized in the preceding quarter.

3. During Q2 2024, the Company recognized net loss of \$53.4 million compared to net loss of \$6.8 million in the preceding quarter. The increase in loss was primarily attributable to foreign exchange losses of \$70.5 million compared to \$19.0 million in the preceding quarter. The change in foreign exchange gain or loss was primarily driven by volatility of the Brazilian Real against the US Dollar during the respective periods. In addition, during the quarter, the Company terminated the Fides option agreement, resulting in a write-down in exploration and evaluation assets of \$10.7 million.
4. During Q1 2024, the Company recognized net loss of \$6.8 million compared to net income of \$37.1 million in the preceding quarter. The decrease in income was primarily attributable to foreign exchange losses of \$19.0 million compared to foreign exchange gains of \$24.9 million in the preceding quarter. The change in foreign exchange gain or loss was primarily driven by volatility of the Brazilian Real against the US Dollar during the respective periods.

5. During Q4 2023, the Company recognized net income of \$37.1 million compared to \$2.8 million in the preceding quarter. The increase was primarily attributable to foreign exchange gains of \$24.9 million compared to foreign exchange losses of \$13.9 million in the preceding quarter. The change in foreign exchange gain or loss was primarily driven by volatility of the Brazilian Real against the US Dollar during the respective periods.
6. During Q3 2023, the Company recognized net income of \$2.8 million compared to \$29.9 million in the preceding quarter. The decrease was primarily attributable to foreign exchange losses of \$13.9 million compared to foreign exchange gain of \$15.1 million in the preceding quarter. The change in foreign exchange gain or loss was primarily driven by volatility of the Brazilian Real against the US Dollar during the respective periods.
7. During Q2 2023, the Company recognized net income of \$29.9 million compared to \$24.5 million in the preceding quarter. The increase was primarily attributable to an increase in foreign exchange gain and the recognition of an unrealized gain in copper derivative contracts.
8. During Q1 2023, the Company recognized net income of \$24.5 million compared to \$22.5 million in the preceding quarter. The increase was primarily attributable to an increase in foreign exchange gain, a reduction in general and administrative expenses, and a reduction in finance expense. In the prior quarter, the Company recognized a \$3.3 million expected credit loss provision.

LIQUIDITY, CAPITAL RESOURCES, AND CONTRACTUAL OBLIGATIONS

Liquidity

As at December 31, 2024, the Company had cash and cash equivalents of \$50.4 million and available liquidity of \$90.4 million. Cash and cash equivalents were primarily comprised of cash held with reputable financial institutions and are invested in highly liquid short-term investments with maturities of three months or less. The funds are not exposed to liquidity risk and there are no restrictions on the ability of the Company to use these funds to meet its obligations.

Cash and cash equivalents decreased by \$61.3 million from December 31, 2023. The Company's cash flows from operating, investing, and financing activities during 2024 are summarized as follows:

- **Cash used in investing activities** of \$335.4 million, including:
 - \$329.0 million of additions to mineral property, plant and equipment; and
 - \$8.6 million of additions to exploration and evaluation assets;net of:
 - \$2.2 million in proceeds from interest received.

Partially offset by:

- **Cash from operating activities** of \$145.4 million, primarily consists of:
 - \$216.2 million of adjusted EBITDA (see Non-IFRS Measures);net of:
 - \$25.7 million of net change in non-cash working capital items;

- \$18.3 million of amortization of non-cash deferred revenues; and
- \$8.2 million of income taxes paid.
- **Cash from financing activities** of \$131.2 million, primarily consists of:
 - \$213.3 million of new loans and borrowings; and
 - \$8.4 million of proceeds from exercise of stock options.

net of:

- \$40.0 million of principal repayments on loans and borrowings;
- \$32.2 million of interest paid on loans and borrowings; and
- \$14.2 million of lease payments.

As at December 31, 2024, the Company had working capital deficit of \$69.9 million.

Capital Resources

The Company's primary sources of capital are comprised of cash from operations, and cash and cash equivalents on hand. The Company continuously monitors its liquidity position and capital structure and, based on changes in operations and economic conditions, may adjust such structure by issuing new common shares or new debt as necessary. Taking into consideration expected cash flow from existing operations and available liquidity, management believes that the Company has sufficient capital to fund its planned operations and activities, including the capital expenditures to complete the Tucumã Project, and other initiatives, for the foreseeable future.

At December 31, 2024, the Company had available liquidity of \$90.4 million, including \$50.4 million in cash and cash equivalents, \$15.0 million of undrawn availability under its senior secured revolving credit facility and \$25.0 million of undrawn availability under its copper repayment facility until March 31, 2025.

Subsequent to December 31, 2024, the Company amended its Credit Facility to increase the limit from \$150.0 million to \$200.0 million and to extend the maturity from December 2026 to December 2028. The interest rate and commitment fee on the Credit Facility were reduced to sliding scales of SOFR plus 2.00% to 4.25%, and 0.45% to 0.96%, respectively. Additionally, the total leverage ratio was replaced with net leverage ratio for purposes of determining financial covenants and interest rates.

In May 2024, to support the commencement of production and associated working capital needs at the Tucumã Project, the Company entered into a \$50.0 million non-priced copper prepayment facility, structured by the Bank of Montreal and with participation by CIBC Capital Markets. This facility will be repaid over 27 equal monthly installments, beginning in October 2024, through the delivery of 272 tonnes of copper each month. Each monthly delivery's value will be determined based on prevailing market copper prices at the time of delivery. Should the value of any delivery exceed the amount of the monthly installment payment of \$2.1 million, the excess value will be repaid to the Company. The copper to be delivered by the Company will be in the form of LME Copper Warrants. Through March 31, 2025, the Company has the option to increase the size of the non-priced copper prepayment facility from \$50.0 million to \$75.0 million.

In relation to its loans and borrowings, the Company is required to comply with certain financial covenants. As of the date of the consolidated financial statements, the Company is in compliance with these covenants. The loan agreements also contain covenants that could restrict the ability of the Company and its subsidiaries, MCSA, Ero Gold, and NX Gold, to, among other things, incur additional indebtedness needed to fund its respective operations, pay dividends or make other distributions, make investments, create liens, sell or transfer assets or enter into transactions with affiliates. There are no other restrictions or externally imposed capital requirements of the Company.

Contractual Obligations and Commitments

The Company has a precious metals purchase agreement with RGLD Gold AG ("Royal Gold"), a wholly-owned subsidiary of Royal Gold, Inc., whereby the Company is obligated to sell a portion of its gold production from the Xavantina Operations at contract prices.

Refer to the "Liquidity Risk" section for further information on the Company's contractual obligations and commitments.

MANAGEMENT OF RISKS AND UNCERTAINTIES

The Company thoroughly examines the various financial instruments and risks to which it is exposed and assesses the impact and likelihood of those risks. These risks may include credit risk, liquidity risk, currency risk, commodity price risk and interest rate risk. Where material, these risks are reviewed and monitored by the Board.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations and arises principally from the Company's receivables from customers. The carrying amount of the financial assets below represents the maximum credit risk exposure as at December 31, 2024 and December 31, 2023:

	December 31, 2024	December 31, 2023
Cash and cash equivalents	50,402	\$ 111,738
Accounts receivable	18,399	5,710
Derivatives	—	11,254
Note receivable	12,009	17,413
Deposits and other assets	4,961	9,484
	<u>\$ 85,771</u>	<u>\$ 155,599</u>

The Company invests cash and cash equivalents with financial institutions that are financially sound based on their credit rating.

The Company's exposure to credit risk associated with accounts receivable is influenced mainly by the individual characteristics of each customer.

In 2022, one of the Company's customers in Brazil, Paranapanema S/A ("PMA"), filed for bankruptcy protection. As a preferred supplier to PMA, the Company had a note receivable arrangement with PMA, which was excluded from the judicial recovery process and provides the Company with certain judicial guarantees. According to the note receivable arrangement, repayment was structured over 24 monthly installments beginning in March 2024, with an annual interest rate equivalent to Brazil's CDI rate of approximately 11.65%.

At December 31, 2024, PMA is in default of the agreement and the gross amount of accounts and note receivable from PMA was \$20.7 million (December 31, 2023 - \$25.2 million). Accordingly, the

note receivable is considered credit impaired, and the Company increased the expected credit loss provision by \$8.0 million in the year ended December 31, 2024 (provision of \$4.1 million for the year ended December 31, 2023). After adjusting for credit loss provision and present value discount of \$13.1 million (December 31, 2023 - \$7.7 million), the book value of the PMA note receivable at December 31, 2024 was \$7.6 million (December 31, 2023 - \$17.4 million.), of which \$3.9 million (December 31, 2023 - \$8.3 million) was included in other current assets.

Liquidity risk

Liquidity risk is the risk associated with the difficulties that the Company may have meeting the obligations associated with financial liabilities that are settled with cash payments or with another financial asset. The Company's approach to liquidity management is to ensure as much as possible that sufficient liquidity exists to meet their maturity obligations on the expiration dates, under normal and stressful conditions, without causing unacceptable losses or with risk of undermining the normal operation of the Company.

The table below shows the Company's maturity of non-derivative financial liabilities on December 31, 2024:

Non-derivative financial liabilities	Carrying value	Contractual cash flows	Up to 12 months	1 - 2 years	3 - 5 years	More than 5 years
Loans and borrowings (including interest)	\$ 602,189	\$ 791,475	\$ 74,251	\$ 105,989	\$ 611,235	\$ —
Accounts payable and accrued liabilities	95,120	95,120	95,120	—	—	—
Other non-current liabilities	5,825	5,825	—	4,771	666	388
Leases	17,885	19,431	11,995	6,398	1,038	—
Total	\$ 721,019	\$ 911,851	\$ 181,366	\$ 117,158	\$ 612,939	\$ 388

As at December 31, 2024, the Company has capital commitments, which is net of advances to suppliers, of \$51.2 million through contracts and purchase orders which are expected to be incurred over a six-year period. In the normal course of operations, the Company may also enter into long-term contracts which can be cancelled with certain agreed customary notice periods without material penalties.

The Company also has a derivative financial liability for foreign exchange collar contracts whose notional amounts and maturity information are disclosed below under foreign exchange currency risk.

Foreign exchange currency risk

The Company's subsidiaries in Brazil are exposed to exchange risks primarily related to the US dollar. In order to minimize currency mismatches, the Company monitors its cash flow projections considering future sales expectations indexed to US dollar variation in relation to the cash requirement to settle the existing financings.

The Company's exposure to foreign exchange currency risk at December 31, 2024 relates to \$60.0 million (December 31, 2023 – \$17.2 million) in loans and borrowings of MCSA denominated in US

dollars and Euros. In addition, the Company is also exposed to foreign exchange currency risk at December 31, 2024 on \$513.6 million of intercompany loan balances (December 31, 2023 - \$342.2 million) which have contractual repayment terms. Strengthening (weakening) in the Brazilian Real against the US dollar at December 31, 2024 by 10% and 20%, would have decreased (increased) pre-tax net loss by \$57.3 million and \$114.6 million, respectively. This analysis is based on the foreign currency exchange variation rate that the Company considered to be reasonably possible at the end of the year and excluding the impact of the derivatives below. The analysis assumes that all other variables, especially interest rates, are held constant.

The Company may use certain foreign exchange derivatives, including collars and forward contracts, to manage its foreign exchange risks. A summary of the Company's foreign exchange derivatives at December 31, 2024 is summarized as follows:

Purpose	Notional Amount	Denomination	Weighted average floor	Weighted average cap / forward price	Maturities
Operational costs	\$390.0 million	USD/BRL	5.43	6.49	Jan 2025 - Dec 2025
Total	\$390.0 million	USD/BRL	5.43	6.43	Jan 2025 - Dec 2025

The aggregate fair value of the Company's foreign exchange derivatives was a net liability of \$17.9 million (December 31, 2023 - asset of \$11.3 million). The fair values of foreign exchange contracts were determined based on option pricing models, forward foreign exchange rates, and information provided by the counter party.

The change in fair value of foreign exchange derivatives was a loss of \$30.8 million for the year ended December 31, 2024 (a gain of \$7.6 million for the year ended December 31, 2023), which has been recognized in foreign exchange (loss) gain.

In addition, during the year ended December 31, 2024, the Company recognized a realized loss of \$8.2 million (realized gain of \$11.4 million for the year ended December 31, 2023) related to the settlement of foreign currency forward collar contracts.

Interest rate risk

The Company is principally exposed to the variation in interest rates on loans and borrowings with variable rates of interest. Management reduces interest rate risk exposure by entering into loans and borrowings with fixed rates of interest or by entering into derivative instruments that fix the ultimate interest rate paid.

The Company is principally exposed to interest rate risk through its Senior Credit Facility and Brazilian Real denominated bank loans. Based on the Company's net exposure at December 31, 2024, a 1% change in the variable rates would not materially impact its pre-tax annual net income.

Price risk

The Company may use derivatives, including forward contracts, collars and swap contracts, to manage commodity price risks.

At December 31, 2024, the Company has entered into zero-cost gold collar contracts on 2,500 ounces of gold per month from January 2025 to December 2025, representing approximately 50% of its estimated production volumes for the period. As of December 31, 2024, the fair value of these contracts was a net liability of \$0.1 million (December 31, 2023 - nil). The fair value of gold collar contracts was determined based on option pricing models, forward gold price, and information provided by counter party. At December 31, 2024, the Company does not have any outstanding copper collar contracts (December 31, 2023 - liability of \$0.6 million).

During the year ended December 31, 2024, the Company recognized an unrealized gain of \$0.2 million (unrealized loss of \$0.1 million for the year ended December 31, 2023) and a realized loss of \$2.6 million (realized loss of \$1.8 million for the year ended December 31, 2023) in relation to its commodity derivatives in in other income or loss.

At December 31, 2024, the Company had provisionally priced sales that are exposed to commodity price changes. Based on the Company's net exposure at December 31, 2024, a 10% change in the price of copper would have changed pre-tax net income (loss) \$6.1 million.

For a discussion of additional risks applicable to the Company and its business and operations, including risks related to the Company's foreign operations, the environment and legal proceedings, see "Risk Factors" in the Company's AIF.

OTHER FINANCIAL INFORMATION

Off-Balance Sheet Arrangements

As at December 31, 2024, the Company had no material off-balance sheet arrangements.

Outstanding Share Data

As of March 6, 2025, the Company had 103,571,507 common shares issued and outstanding.

ACCOUNTING POLICIES, JUDGMENTS AND ESTIMATES

Critical Accounting Judgments and Estimates

The preparation of consolidated financial statements in conformity with IFRS requires management to make judgments, estimates and assumptions about future events that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Although these estimates are based on management's best knowledge of the amount, events or actions, actual results may differ from these estimates.

The Company's material accounting policies and accounting estimates are contained in the Company's consolidated financial statements for the year ended December 31, 2024. Judgements have been made in the determination of the functional currency of the Company and its subsidiaries, assessment of the probability of cash outflow related to legal claims and contingent liabilities, and commencement of commercial production. Certain of the Company's accounting policies, such as

derivative instruments, deferred revenue, carrying amounts of mineral properties and associated mine closure and reclamation costs, provision for mine closure and reclamation costs, income tax including tax uncertainties, expected credit losses involve critical accounting estimates. Certain of these estimates are dependent on mineral reserves and resource information. Changes in mineral reserves and resources could impact depreciation and depletion rates, asset carrying amounts and the provisions for mine closure and reclamation costs. The Company determines its mineral reserves and resources based on information compiled by competent individuals. Information regarding mineral reserves and resources is used in the calculation of depreciation, depletion and determination, when applicable, of the recoverable amount of CGUs, and for forecasting the timing of reclamation and closure cost expenditures. There are numerous uncertainties inherent in the determination of mineral reserves, and assumptions that are valid at the time of determination may change significantly when new information becomes available. Changes in the methodology, forecasted prices of commodities, exchange rates, production costs or recovery rates may change the economic status of mineral reserves and may, ultimately, result in changes in the mineral reserves.

Management continuously reviews its estimates, judgments and assumptions on an ongoing basis using the most current information available. Revisions to estimates are recognized prospectively.

Critical Judgments

Functional currency

The functional currency of the Company and each of its subsidiaries is the currency of the primary economic environment in which the entities operate. The Company has determined that the functional currency for the Company is the US dollar while the functional currency for all of its Brazilian subsidiaries is the BRL. Assessment of functional currency involves certain judgments to determine the primary economic environment and the Company reconsiders the functional currency of its entities if there is a change in events and conditions which determined the primary economic environment.

Legal claims and contingent liabilities

The recognition of legal provisions and contingent liabilities involves the assessment of claims made against the Company and each of its subsidiaries. The recognition of a legal provision, or disclosure of a contingent liability, involves certain judgments to determine the probability of whether a cash outflow will occur. In making this judgment, management has assessed various criteria and also relies on the opinions of its legal advisers to assist in making this assessment.

Commencement of Commercial Production

Determining when a mine under construction is substantially complete and ready for its intended use requires significant judgement. The criteria the Company used to make that determination for the Tucumã Operation included, amongst other things:

- the ability of the mine to produce salable product (i.e. the ability to produce metal within specifications),

- throughput of the processing plant reach a predefined percentage of design capacity over a reasonable period,
- processing plant recoveries reaching a pre-defined percentage of expected recoveries.

After evaluating the above factors, the Company concluded that the Tucumã Operation had not achieved commercial production as of December 31, 2024, and therefore, is not yet ready for its intended use.

Key Sources of Estimation Uncertainty

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of assets and liabilities at the date of the consolidated financial statements and the reported amounts of expenses during the reporting periods. Actual results could differ from those estimates and such differences could be significant. Significant estimates made by management affecting the consolidated financial statements include:

Derivative instruments

The fair value of derivative instruments is determined using either present value techniques or option pricing models that utilize a variety of inputs that are a combination of quoted prices and market-corroborated inputs, including assumptions for forward interest and foreign exchange rates, volatilities and discount rates. The fair value of the Company's derivative contracts includes an adjustment for credit risk for either the Company or the counter party as applicable. Changes in the assumptions for inputs into the models affect the fair value of the derivatives recognized in the statement of financial position as well as the unrealized gains or losses recognized in net income.

Carrying amounts of mineral properties and associated mine closure and reclamation costs

Changes in mineral reserves and resources information could impact depreciation and depletion rates, asset carrying amounts and the provisions for mine closure and reclamation costs. The Company determines its mineral reserves and resources based on information compiled by competent individuals. Mineral reserves and resources information is used in the calculation of depreciation, depletion and determination, when applicable, of the recoverable amount of CGUs, and for forecasting the timing of reclamation and closure cost expenditures.

There are numerous uncertainties inherent in estimating mineral reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the estimation methodology, forecasted prices of commodities, exchange rates, production costs or recovery rates may change the economic status of mineral reserves and may, ultimately, result in changes in the mineral reserves.

Mine closure and reclamation costs

Significant estimates and assumptions are made in determining the provision for mine closure and reclamation costs as there are numerous factors that will affect the ultimate liability payable. These factors include estimation of the extent and cost of rehabilitation activities, timing of future cash flows, discount rates, inflation rate, and regulatory requirements.

Changes in the above factors can result in a change to the provision recognized by the Company. Changes to mine closure and rehabilitation costs are recorded with a corresponding change to the carrying amounts of related

mineral properties, plant and equipment. Adjustments to the carrying amounts of related mineral properties, plant and equipment can result in a change to future depreciation and depletion expense.*Income taxes*

Income taxes

The determination of the Company's tax expense for the period and deferred tax assets and liabilities involves significant estimation and judgment by management. In determining these amounts, management interprets tax legislation in a variety of jurisdictions and makes estimates of the expected timing of the reversal of deferred tax assets and liabilities. Management also makes estimates of future earnings, which affect the extent to which potential future tax benefits may be used. The Company is subject to assessments by various taxation authorities, which may interpret legislation differently. These differences may affect the final amount or the timing of the payment of taxes. The Company provides for such differences where known based on management's best estimate of the probable outcome of these matters.

The Company operates in Brazil where tax authorities may audit income tax treatments and the resolution of such audits may span multiple years. Tax law in Brazil is complex and often subject to changes and to varied interpretations; accordingly, the ultimate outcome with respect to income tax treatments may differ from the amounts recognized. The Company's assessment of whether it is probable that uncertain income tax treatments will be accepted by tax authorities in Brazil is a significant management judgment.

Deferred Revenue

Judgment and estimates were required in determining the accounting for the precious metal purchase agreement ("PMPA") with RGLD Gold AG, a subsidiary of Royal Gold Inc. (collectively "Royal Gold"), which is accounted for as deferred revenue in accordance with IFRS 15 Revenue from Contracts with Customers ("IFRS 15"). As the Company's obligation under the precious metal purchase agreement will be satisfied through deliveries of a non-financial item (i.e. deliveries of gold ounces), rather than cash or other financial assets, it was determined to be entered into and continued to be held for the purpose of the delivery of a non-financial item in accordance with the Company's expected sale or usage requirements and thus not within the scope of IFRS 9 Financial Instruments ("own use exemption"). The determination of whether the own use exemption applies requires management's judgements.

Each period management estimates the cumulative amount of the deferred revenue obligation that has been satisfied and, therefore, recognized as revenue. Key inputs into the estimate of the amount of deferred revenue that should be recognized include the following:

- a. Future gold prices were used at inception of the contract to estimate the expected total consideration to be received under the contract including variable consideration and is used as the stand alone selling price to allocate the consideration to each ounce of gold to be delivered to Royal Gold, and
- b. Expected life of mine gold production and the timing thereof, which is estimated based on the approved life of mine for the NX Gold mine and estimated proven and probable reserves.

Expected credit loss provision

Significant estimates and assumptions are made in determining the expected credit loss provision for financial assets that are measured at amortized costs as there are numerous factors that will affect the ultimate asset

receivable. These factors include exposure at default, the expected recovery, the discount rate, and the timing of expected cash flow.

CAPITAL EXPENDITURES

The following table presents capital expenditures at the Company's operations on an accrual basis and are net of any sales and value-added taxes.

	2024	2023
Caraíba Operations

ALTERNATIVE PERFORMANCE (NON-IFRS) MEASURES

The Company utilizes certain alternative performance (non-IFRS) measures to monitor its performance, including copper C1 cash cost, copper C1 cash cost including foreign exchange hedges, realized copper price, gold C1 cash cost, gold AISC, realized gold price, EBITDA, adjusted EBITDA, adjusted net income attributable to owners of the Company, adjusted net income per share, net (cash) debt, working capital and available liquidity. These performance measures have no standardized meaning prescribed within generally accepted accounting principles under IFRS and, therefore, amounts presented may not be comparable to similar measures presented by other mining companies. These non-IFRS measures are intended to provide supplemental information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The tables below provide reconciliations of these non-IFRS measures to the most directly comparable IFRS measures as contained in the Company's financial statements.

Unless otherwise noted, the non-IFRS measures presented below have been calculated on a consistent basis for the periods presented.

Copper C1 Cash Cost and Copper C1 Cash Cost including Foreign Exchange Hedges

Copper C1 cash cost and copper C1 cash cost including foreign exchange hedges are non-IFRS performance measures used by the Company to manage and evaluate the performance of its copper mining operations.

Copper C1 cash cost is calculated as C1 cash costs divided by total pounds of copper produced during the period. C1 cash costs comprise the total cost of production, including expenses related to transportation, and treatment and refining charges. These costs are net of by-product credits, incentive payments and certain tax credits associated with sales invoiced to the Company's Brazilian customer.

Copper C1 cash cost including foreign exchange hedges is calculated as C1 cash costs, adjusted for realized gains or losses from its operational foreign exchange hedges, divided by total pounds of copper produced during the period. Although the Company does not apply hedge accounting in its consolidated financial statements and recognizes these contracts at fair value through profit or loss, the Company believes it appropriate to present

cash costs including the impact of realized gains and losses as these contracts were entered into to mitigate the impact of changes in exchange rates.

While copper C1 cash cost is widely reported in the mining industry as a performance benchmark, it does not have a standardized meaning and is disclosed as a supplement to IFRS measures.

The following table provides a reconciliation of copper C1 cash cost to cost of production, its most directly comparable IFRS measure.

Reconciliation:	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Cost of production	\$ 33,685	\$ 40,149	\$ 39,790	\$ 158,006	\$ 153,187
Add (less):					
Transportation costs & other	1,149	1,283	1,853	4,967	6,539
Treatment, refining, and other	2,934	3,170	7,332	15,332	28,323

Treatment, refining and other	\$ 0.16	\$ 0.14	\$ 0.28	\$ 0.20	\$ 0.29
Copper C1 cash costs⁽¹⁾	\$ 1.85	\$ 1.63	\$ 1.75	\$ 1.97	\$ 1.80
Loss (gain) on foreign exchange hedges	\$ 0.22	\$ 0.09	\$ (0.16)	\$ 0.08	\$ (0.12)
Copper C1 cash costs including foreign exchange hedges	\$ 2.07	\$ 1.72	\$ 1.59	\$ 2.05	\$ 1.68

(1) Copper C1 cash costs for 2024 do not include Tucumã Operation's results, as commercial production has not been achieved as of December 31, 2024.

Realized Copper Price

Realized copper price is a non-IFRS ratio which is calculated as gross copper revenue divided by pounds of copper sold during the period. Management believes measuring realized copper price enables investors to better understand performance based on realized copper sales in each reporting period.

The following table provides a calculation of realized copper price and a reconciliation to copper segment.

Reconciliation:	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Copper revenue ⁽¹⁾	\$ 71,673	\$ 87,305	\$ 83,237	\$ 311,777	\$ 320,603
less: by-product credits	(5,163)	(6,584)	(3,394)	(17,618)	(12,930)
Net copper revenue	66,510	80,721	79,843	294,159	307,673
add: treatment, refining and other	2,934	3,170	7,332	15,332	28,323
add: royalty taxes	1,391	1,489	1,501	5,667	6,049
Gross copper revenue	70,835	85,380	88,676	315,158	342,045
Total copper sold in concentrate (lbs, 000)	18,563	21,980	25,197	80,594	93,906
Realized copper price⁽²⁾	\$ 3.82	\$ 3.88	\$ 3.52	\$ 3.91	\$ 3.64

(1) Copper revenue includes provisional price and volume adjustments

(2) Realized Copper Price for 2024 does not include Tucumã Operation's results, as commercial production has not been achieved as of December 31, 2024.

Gold C1 Cash Cost and Gold AISC

Gold C1 cash cost is a non-IFRS performance measure used by the Company to manage and evaluate the operating performance of its gold mining segment and is calculated as C1 cash costs divided by total ounces of gold produced during the period. C1 cash cost includes total cost of production, net of by-product credits and incentive payments. Gold C1 cash cost is widely reported in the mining industry as benchmarks for performance but does not have a standardized meaning and is disclosed in supplemental to IFRS measures.

Gold AISC is an extension of gold C1 cash cost discussed above and is also a key performance measure used by management to evaluate operating performance of its gold mining segment. Gold AISC is calculated as AISC divided by total ounces of gold produced during the period. AISC includes C1 cash costs, site general and administrative costs, accretion of mine closure and rehabilitation provision, sustaining capital expenditures, sustaining leases, and royalties and production taxes. Gold AISC is widely reported in the mining industry as benchmarks for performance but does not have a standardized meaning and is disclosed in supplement to IFRS measures.

The following table provides a reconciliation of gold C1 cash cost and gold AISC to cost of production, its most directly comparable IFRS measure.

Reconciliation:	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Cost of production	\$ 9,000	\$ 6,220	\$ 7,122	\$ 30,055	\$ 25,209
Add (less):

Realized Gold Price

Realized gold price is a non-IFRS ratio that is calculated as gross gold revenue divided by ounces of gold sold during the period. Management believes measuring realized gold price enables investors to better understand performance based on the realized gold sales in each reporting period. The following table provides a calculation of realized gold price and a reconciliation to gold segment revenues, its most directly comparable IFRS measure.

<i>(in '000s except for ounces and price per ounce)</i>	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
NX Gold revenue	\$ 22,786	\$ 34,433	\$ 33,176	\$ 127,303	\$ 106,877
less: by-product credits	(189)	(232)	(248)	(869)	(827)
Gold revenue, net	\$ 22,597	\$ 34,201	\$ 32,928	\$ 126,434	\$ 106,050
add: smelting, refining, and other charges	507	619	713	2,492	2,165
Gold revenue, gross	\$ 23,104	\$ 34,820	\$ 33,641	\$ 128,926	\$ 108,215
Spot (cash)	\$ 21,069	\$ 25,718	\$ 28,205	\$ 103,091	\$ 85,724
Stream (cash)	\$ 1,788	\$ 2,047	\$ 1,613	\$ 7,525	\$ 5,409
Stream (amortization of deferred revenue) ⁽¹⁾	\$ 247	\$ 7,055	\$ 3,823	\$ 18,310	\$ 17,082
Total gold ounces sold	11,106	14,615	18,479	60,195	57,949
Spot	7,770	10,425	14,332	44,278	43,944
Stream	3,336	4,190	4,147	15,917	14,005
Realized gold price (per ounce)	\$ 2,080	\$ 2,382	\$ 1,820	\$ 2,142	\$ 1,867
Spot	\$ 2,712	\$ 2,467	\$ 1,968	\$ 2,328	\$ 1,951
Stream (cash + amortization of deferred revenue) ⁽¹⁾	\$ 610	\$ 2,172	\$ 1,311	\$ 1,623	\$ 1,606
Cash (spot cash + stream cash)	\$ 2,058	\$ 1,900	\$ 1,614	\$ 1,838	\$ 1,573

(1) Amortization of deferred revenue during the three months and year ended December 31, 2024 is net of \$4.2 million and \$3.0 million, respectively, (three months and year ended December 31, 2023 - \$1.9 million and \$2.5 million, respectively) related to change in estimate attributed to advances received and change in life-of-mine production estimates.

Earnings before interest, taxes, depreciation, and amortization (“EBITDA”) and Adjusted EBITDA

EBITDA and adjusted EBITDA are non-IFRS performance measures used by management to evaluate its debt service capacity and performance of its operations. EBITDA represents earnings before finance expense, finance income, income taxes, depreciation and amortization. Adjusted EBITDA is EBITDA before the pre-tax

effect of adjustments for non-cash and/or non-recurring items required in determination of EBITDA for covenant calculation purposes.

The following table provides a reconciliation of EBITDA and Adjusted EBITDA to net income, its most directly comparable IFRS measure.

Reconciliation:	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Net (Loss) Income	\$ (48,928)	\$ 41,367	\$ 37,052	\$ (67,790)	\$ 94,304
Adjustments:					
Finance expense	3,851	4,039	5,284	17,089	25,822
Finance income	(690)	(781)	(1,989)	(4,300)	(12,465)
Income tax (recovery) expense	(5,862)	8,331	8,415	(7,651)	18,047
Amortization and depreciation	20,265	21,555	24,980	87,410	83,024
EBITDA	\$ (31,364)	\$ 74,511	\$ 73,742	\$ 24,758	\$ 208,732
Foreign exchange loss (gain)	92,804	(17,246)	(24,871)	165,008	(34,612)
Share based compensation	(7,496)	4,859	477	9,983	9,218
Change in rehabilitation and closure provision ⁽¹⁾	4,609	—	—	4,609	—
Write-down of exploration and evaluation asset	839	467	—	12,051	—
Unrealized (gain) loss on commodity derivatives	(250)	(360)	955	(238)	115
Adjusted EBITDA	\$ 59,142	\$ 62,231	\$ 50,303	\$ 216,171	\$ 183,453

(1) Change in rehabilitation and closure provision relates to revisions to rehabilitation and closure plans and cost estimates at the Company's historic mining operations that have entered the closure phase, and for which there are no substantive future economic value. Such costs are reflected within other expenses on the Company's Consolidated Statements of Operations and Comprehensive (Loss) Income.

Adjusted net income attributable to owners of the Company and Adjusted net income per share attributable to owners of the Company

"Adjusted net income attributable to owners of the Company" is net income attributed to shareholders as reported, adjusted for certain types of transactions that, in management's judgment, are not indicative of our normal operating activities or do not necessarily occur on a recurring basis. "Adjusted net income per share attributable to owners of the Company" ("Adjusted EPS") is calculated as "adjusted net income attributable to owners of the Company" divided by weighted average number of outstanding common shares in the period. The Company believes that, in addition to conventional measures prepared in accordance with IFRS, the Company and certain investor and analysts use these supplemental non-IFRS performance measures to evaluate the normalized performance of the Company. The presentation of Adjusted EPS is not meant to substitute the net income (loss) per share attributable to owners of the Company ("EPS") presented in accordance with IFRS, but rather it should be evaluated in conjunction with such IFRS measures.

The following table provides a reconciliation of Adjusted net income attributable to owners of the Company and Adjusted EPS to net income attributable to the owners of the Company, its most directly comparable IFRS measure.

Reconciliation:	2024 - Q4	2024 - Q3	2023 - Q4	2024	2023
Net (loss) income as reported attributable to the owners of the Company	\$ (48,944)	\$ 40,857	\$ 36,549	\$ (68,475)	\$ 92,804
Adjustments:					
Share based compensation	(7,496)	4,859	477	9,983	9,218
Unrealized foreign exchange loss (gain) on USD denominated balances in MCSA	66,971	(11,860)	(10,308)	114,885	(15,296)
Unrealized foreign exchange loss (gain) on foreign exchange derivative contracts	15,182	(9,807)	(9,852)	30,685	(7,552)
Change in rehabilitation and closure provision ⁽¹⁾	4,591	—	—	4,591	—
Write-down of exploration and evaluation asset	836	465	—	12,046	—
Unrealized (gain) loss on commodity derivatives	(243)	(367)	951	(240)	115
Tax effect on the above adjustments	(13,459)	3,431	2,932	(23,060)	3,472
Adjusted net income attributable to owners of the Company	\$ 17,438	\$ 27,578	\$ 20,749	\$ 80,415	\$ 82,761
Weighted average number of common shares					
Basic	103,345,064	103,239,881	98,099,791	103,106,305	94,111,548
Diluted	103,877,690	103,973,827	98,482,755	103,713,563	94,896,334
Adjusted EPS					
Basic	\$ 0.17	\$ 0.27	\$ 0.21	\$ 0.78	\$ 0.88
Diluted	\$ 0.17	\$ 0.27	\$ 0.21	\$ 0.78	\$ 0.87

(1) Change in rehabilitation and closure provision relates to revisions to rehabilitation and closure plans and cost estimates at the Company's historic mining operations that have entered the closure phase, and for which there are no substantive future economic value. Such costs are reflected within other expenses on the Company's Consolidated Statements of Operations and Comprehensive (Loss) Income.

Net Debt

Net debt is a performance measure used by the Company to assess its financial position and ability to pay down its debt. Net debt is determined based on cash and cash equivalents, short-term investments, net of loans and borrowings as reported in the Company's consolidated financial statements. The following table provides a

calculation of net (cash) debt based on amounts presented in the Company's consolidated financial statements as at the periods presented.

	December 31, 2024	September 30, 2024	December 31, 2023
Current portion of loans and borrowings	\$ 45,893	\$ 39,383	\$ 20,381
Long-term portion of loans and borrowings	556,296	499,527	405,852
Less:			
Cash and cash equivalents	(50,402)	(20,229)	(111,738)
Short-term investments	—	—	—
Net debt (cash)	\$ 551,787	\$ 518,681	\$ 314,495

Working Capital and Available Liquidity

Working capital is calculated as current assets less current liabilities as reported in the Company's consolidated financial statements. The Company uses working capital as a measure of the Company's short-term financial health and ability to meet its current obligations using its current assets. Available liquidity is calculated as the sum of cash and cash equivalents, short-term investments and the undrawn amount available on its revolving credit facilities. The Company uses this information to evaluate the liquid assets available. The following table provides a calculation for these based on amounts presented in the Company's consolidated financial statements as at the periods presented.

	December 31, 2024	September 30, 2024	December 31, 2023
Current assets	\$ 141,790	\$ 126,808	\$ 199,487
Less: Current liabilities	(211,706)	(187,708)	(173,800)
Working (deficit) capital	\$ (69,916)	\$ (60,900)	\$ 25,687
Cash and cash equivalents	50,402	20,229	111,738
Available undrawn revolving credit facilities ⁽¹⁾	15,000	80,000	150,000
Available undrawn prepayment facilities ⁽²⁾	25,000	25,000	—
Available liquidity	\$ 90,402	\$ 125,229	\$ 261,738

(1) In January 2025, the Company amended its Senior Credit Facility to increase the limit from \$150.0 million to \$200.0 million and extended the maturity from December 2026 to December 2028.

(2) In May 2024, the Company entered into a \$50.0 million non-priced copper prepayment facility arrangement. Through March 31, 2025, the Company has the option to increase the size of the facility from \$50.0 million to \$75.0 million.

DISCLOSURE CONTROLS AND PROCEDURES AND INTERNAL CONTROL OVER FINANCIAL REPORTING

The Company's management, with the participation of the CEO and CFO, is responsible for establishing and maintaining adequate disclosure controls and procedures ("DC&P") and internal control over financial reporting ("ICFR") using Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO") as its internal control framework.

The Company's DC&P are designed to provide reasonable assurance that material information related to the Company is identified and communicated on a timely basis.

The Company's ICFR is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. Any system of ICFR, no matter how well designed, has inherent limitations and cannot provide absolute assurance that all misstatements and instances of fraud, if any, within the Company have been prevented or detected. The Company's ICFR is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS.

As required by National Instrument 52-109, Certification of Disclosure in Issuers' Annual and Interim Filings, the Company's management, including the CEO and CFO, has evaluated the design and operating effectiveness of the Company's DC&P and ICFR and concluded that the Company's DC&P and ICFR were effective as of December 31, 2024.

There were no changes in the Company's DC&P and ICFR that materially affected, or are reasonably likely to materially affect, ICFR during the year ended December 31, 2024.

NOTE REGARDING SCIENTIFIC AND TECHNICAL INFORMATION

Unless otherwise indicated, scientific and technical information in this MD&A relating to Ero's properties ("Technical Information") is based on information contained in the following:

The report prepared in accordance with National Instrument 43-101, *Standards of Disclosure for Mineral Projects* ("NI 43-101") and entitled "2022 Mineral Resources and Mineral Reserves of the Caraíba Operations, Curaçá Valley, Bahia, Brazil", dated December 22, 2022 with an effective date of September 30, 2022, prepared by Porfirio Cabaleiro Rodriguez, FAIG, Bernardo Horta de Cerqueira Viana, FAIG, Fábio Valério Câmara Xavier, MAIG and Ednie Rafael Moreira de Carvalho Fernandes, MAIG all of GE21 Consultoria Mineral Ltda. ("GE21"), Dr. Beck Nader, FAIG of BNA Mining Solutions ("BNA") and Alejandro Sepulveda, Registered Member (#0293) (Chilean Mining Commission) of NCL Ingeniería y Construcción SpA ("NCL") (the "Caraíba Operations Technical Report"). Each a "qualified person" and "independent" of the Company within the meanings of NI 43-101.

The report prepared in accordance with NI 43-101 and entitled "Mineral Resource and Mineral Reserve Estimate of the Xavantina Operations, Nova Xavantina", dated May 12, 2023 with an effective date of October 31, 2022, prepared by Porfirio Cabaleiro Rodriguez, FAIG, Leonardo de Moraes Soares, MAIG and Guilherme Gomides

Ferreira, MAIG, all of GE21 (the “Xavantina Operations Technical Report”). Each a “qualified person” and “independent” of the Company within the meanings of NI 43-101.

The report prepared in accordance with NI 43-101 and entitled “Boa Esperança Project NI 43-101 Technical Report on Feasibility Study Update”, dated November 12, 2021 with an effective date of August 31, 2021, prepared by Kevin Murray, P. Eng., Erin L. Patterson, P.E. and Scott C. Elfen, P.E. all of Ausenco Engineering Canada Inc. (or its affiliate Ausenco Engineering USA South Inc. in the case of Ms. Patterson), Carlos Guzmán, FAusIMM RM CMC of NCL and Emerson Ricardo Re, MSc, MBA, MAusIMM (CP) (No. 305892), Registered Member (No. 0138) (Chilean Mining Commission) and Resource Manager of the Company on the date of the report (now of HCM Consultoria Geologica Eireli (“HCM”)) (the “Tucumã Project Technical Report”). Each of Kevin Murray, P. Eng., Erin L. Patterson, P.E. and Scott C. Elfen, P.E., Carlos Guzmán, FAusIMM RM CMC and Emerson Ricardo Re, MAusIMM (CP), is a “qualified person” of the Company within the meanings of NI 43-101. Each of Kevin Murray, P. Eng., Erin L. Patterson, P.E. and Scott C. Elfen, P.E., and Carlos Guzmán, FAusIMM RM CMC are “independent” of the Company within the meaning of NI 43-101. Emerson Ricardo Re, MAusIMM (CP), as Resource Manager of the Company (on the date of the report and now of HCM), was not “independent” of the Company on the date of the report, within the meaning of NI 43-101.

Reference should be made to the full text of the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report, each of which is available for review on the Company's website at www.erocopper.com and under the Company's profile on SEDAR+ at www.sedarplus.ca, and EDGAR at www.sec.gov.

The disclosure of Technical Information in this MD&A has been reviewed and approved by Cid Gonçalves Monteiro Filho, SME RM (04317974), MAIG (No. 8444), FAusIMM (No. 329148) and Resource Manager of the Company who is a “qualified person” within the meanings of NI 43-101.

Cautionary Note Regarding Forward-Looking Statements

This MD&A contains “forward-looking statements” within the meaning of the United States Private Securities Litigation Reform Act of 1995 and “forward-looking information” within the meaning of applicable Canadian securities legislation (collectively, “forward-looking statements”). Forward-looking statements include statements that use forward-looking terminology such as “may”, “could”, “would”, “will”, “should”, “intend”, “target”, “plan”, “expect”, “budget”, “estimate”, “forecast”, “schedule”, “anticipate”, “believe”, “continue”, “potential”, “view” or the negative or grammatical variation thereof or other variations thereof or comparable terminology. Forward-looking statements may include, but are not limited to, statements with respect to the Company's production, operating cost and capital expenditure guidance; targeting additional mineral resources and expansion of deposits; capital and operating cost estimates and economic analyses (including cash flow projections), including those from the Caraíba Operations Technical Report, the Xavantina Operations Technical Report and the Tucumã Project Technical Report; the Company's expectations, strategies and plans for the Caraíba Operations, the Xavantina Operations and the Tucumã Project, including the Company's planned exploration, development, construction and production activities; the Company's plans for the Furnas Project; the results of future exploration and drilling; estimated completion dates for certain milestones; successfully adding or upgrading mineral resources and successfully developing new deposits; the costs and timing of future exploration, development and construction including but not limited to the Deepening Extension Project at the Caraíba Operations and the duration of the ramp-up process and timing of commercial production at the Tucumã Operation; the timing and amount of future production at the Caraíba Operations, the Xavantina Operations and the Tucumã Operation; expectations regarding the Company's ability to manage risks related to future copper price fluctuations and volatility; future

financial or operating performance and condition of the Company and its business, operations and properties, including expectations regarding liquidity, capital structure, competitive position and payment of dividends; expectations regarding future

currency exchange rates; expected concentrate treatment and refining charges; gold by-product credits and USD to BRL exchange rate; and any other statement that may predict, forecast, indicate or imply future plans, intentions, levels of activity, results, performance or achievements.

Forward-looking statements are subject to a variety of known and unknown risks, uncertainties and other factors that could cause actual results, actions, events, conditions, performance or achievements to materially differ from those expressed or implied by the forward-looking statements, including, without limitation, risks discussed in this MD&A and in the AIF under the heading “*Risk Factors*”. The risks discussed in this MD&A and in the AIF are not exhaustive of the factors that may affect any of the Company’s forward-looking statements. Although the Company has attempted to identify important factors that could cause actual results, actions, events, conditions, performance or achievements to differ materially from those contained in forward-looking statements, there may be other factors that cause results, actions, events, conditions, performance or achievements to differ from those anticipated, estimated or intended.

Forward-looking statements are not a guarantee of future performance. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Forward-looking statements involve statements about the future and are inherently uncertain, and the Company’s actual results, achievements or other future events or conditions may differ materially from those reflected in the forward-looking statements due to a variety of risks, uncertainties and other factors, including, without limitation, those referred to herein and in the AIF under the heading “*Risk Factors*”.

The Company’s forward-looking statements are based on the assumptions, beliefs, expectations and opinions of management on the date the statements are made, many of which may be difficult to predict and beyond the Company’s control. In connection with the forward-looking statements contained in this MD&A and in the AIF, the Company has made certain assumptions about, among other things: favourable equity and debt capital markets; the ability to raise any necessary additional capital on reasonable terms to advance the production, development and exploration of the Company’s properties and assets; future prices of copper, gold and other metal prices; the timing and results of exploration and drilling programs; the accuracy of any mineral reserve and mineral resource estimates; the geology of the Caraíba Operations, the Xavantina Operations and the Tucumã Operation being as described in the respective technical report for each property; production costs; the accuracy of budgeted exploration, development and construction costs and expenditures; the price of other commodities such as fuel; future currency exchange rates, interest rates and tariff rates; operating conditions being favourable such that the Company is able to operate in a safe, efficient and effective manner; work force continuing to remain healthy in the face of prevailing epidemics, pandemics or other health risks, political and regulatory stability; the receipt of governmental, regulatory and third party approvals, licenses and permits on favourable terms; obtaining required renewals for existing approvals, licenses and permits on favourable terms; requirements under applicable laws; sustained labour stability; stability in financial and capital goods markets; availability of equipment; positive relations with local groups and the Company’s ability to meet its obligations under its agreements with such groups; and satisfying the terms and conditions of the Company’s current loan arrangements. Although the Company believes that the assumptions inherent in forward-looking statements are reasonable as of the date of this MD&A, these assumptions are subject to significant business, social, economic, political, regulatory, competitive and other risks and uncertainties, contingencies and other factors that could cause actual actions, events, conditions, results, performance or achievements to be materially different from

those projected in the forward-looking statements. The Company cautions that the foregoing list of assumptions is not exhaustive.

Other events or circumstances could cause actual results to differ materially from those estimated or projected and expressed in, or implied by, the forward-looking statements contained in this MD&A.

Forward-looking statements contained herein are made as of the date of this MD&A and the Company disclaims any obligation to update or revise any forward-looking statement, whether as a result of new information, future events or results or otherwise, except as and to the extent required by applicable securities laws.

Cautionary Notes Regarding Mineral Resource and Reserve Estimates

Unless otherwise indicated, all reserve and resource estimates included in this MD&A and the documents incorporated by reference herein have been prepared in accordance with Canadian NI 43-101 and the Canadian Institute of Mining, Metallurgy and Petroleum (the “CIM”) — CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended (the “CIM Standards”). NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Canadian standards, including NI 43-101, differ significantly from the requirements of the United States Securities and Exchange Commission (the “SEC”), and reserve and resource information included herein may not be comparable to similar information disclosed by U.S. companies. In particular, and without limiting the generality of the foregoing, this MD&A and the documents incorporated by reference herein use the terms “measured resources,” “indicated resources” and “inferred resources” as defined in accordance with NI 43-101 and the CIM Standards.

Further to recent amendments, mineral property disclosure requirements in the United States (the “U.S. Rules”) are governed by subpart 1300 of Regulation S-K of the U.S. Securities Act of 1933, as amended (the “U.S. Securities Act”) which differ from the CIM Standards. As a foreign private issuer that is eligible to file reports with the SEC pursuant to the multi-jurisdictional disclosure system (the “MJDS”), Ero is not required to provide disclosure on its mineral properties under the U.S. Rules and will continue to provide disclosure under NI 43-101 and the CIM Standards. If Ero ceases to be a foreign private issuer or loses its eligibility to file its annual report on Form 40-F pursuant to the MJDS, then Ero will be subject to the U.S. Rules, which differ from the requirements of NI 43-101 and the CIM Standards.

Pursuant to the new U.S. Rules, the SEC recognizes estimates of “measured mineral resources”, “indicated mineral resources” and “inferred mineral resources.” In addition, the definitions of “proven mineral reserves” and “probable mineral reserves” under the U.S. Rules are now “substantially similar” to the corresponding standards under NI 43-101. Mineralization described using these terms has a greater amount of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, U.S. investors are cautioned not to assume that any measured mineral resources, indicated mineral resources, or inferred mineral resources that Ero reports are or will be economically or legally mineable. Further, “inferred mineral resources” have a greater amount of uncertainty as to their existence and as to whether they can be mined legally or economically. Under Canadian securities laws, estimates of “inferred mineral resources” may not form the basis of feasibility or pre-feasibility studies, except in rare cases. While the above terms under the U.S. Rules are “substantially similar” to the standards under NI 43-101 and CIM Standards, there are differences in the definitions under the U.S. Rules and CIM Standards. Accordingly, there is no assurance any mineral reserves or mineral resources that Ero may report as “proven mineral reserves”, “probable mineral reserves”, “measured mineral resources”, “indicated mineral resources” and “inferred mineral resources” under NI 43-101 would be the same had Ero prepared the reserve or resource estimates under the standards adopted under the U.S. Rules.

ADDITIONAL INFORMATION

Additional information about Ero and its business activities, including the AIF, is available under the Company's profile at www.sedarplus.ca and www.sec.gov.

CONSOLIDATED FINANCIAL STATEMENTS

**FOR THE YEARS ENDED
DECEMBER 31, 2024 AND 2023**

Report of Independent Registered Public Accounting Firm

To the Shareholders and Board of Directors
Ero Copper Corp.

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Ero Copper Corp. and subsidiaries (the Company) as of December 31, 2024 and 2023, the related consolidated statements of operations and comprehensive (loss) income, cash flow and changes in shareholders' equity for each of the years in the two-year period ended December 31, 2024, and the related notes (collectively, the consolidated financial statements). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2024 and 2023, and its financial performance and its cash flows for each of the years in the two-year period ended December 31, 2024, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of December 31, 2024, based on the criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated March 6, 2025 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

Basis for Opinion

These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the consolidated financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of a critical audit matter does not alter in any way our opinion on

the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing separate opinions on the critical audit matter or on the accounts or disclosures to which it relates.

Assessment of recognition of uncertainties over income tax treatments in Brazil

As discussed in note 3(c) to the consolidated financial statements, uncertainties over income tax treatments are evaluated on the basis of whether it is probable that they will be accepted upon examination by the relevant taxing authorities including Brazil. These uncertainties impact the amount of income taxes recognized. As discussed in notes 2(d), the Company operates in Brazil where tax authorities may audit income tax treatments and the resolution of such audits may span multiple years. Tax law in Brazil is complex and often subject to changes and to varied interpretations; accordingly, the ultimate outcome with respect to income tax treatments may differ from the amounts recognized.

We identified the assessment of recognition of uncertainties over income tax treatments in Brazil as a critical audit matter. A high degree of subjective auditor judgment and specialized skills and knowledge was required in assessing the Company's judgments and estimates relating to interpretation and application of income tax law that were used to determine these uncertain tax positions.

The following are the primary procedures we performed to address this critical audit matter. We evaluated the design and tested the operating effectiveness of an internal control related to the Company's process to assess uncertain tax positions. We involved tax professionals with specialized skills and knowledge who assisted in evaluating the Company's application of tax law and assessing its uncertain tax positions by inspecting internally and externally prepared documentation, including correspondence with the Brazilian tax authorities and third-party legal and tax advice received by the Company.

March 6, 2025

Report of Independent Registered Public Accounting Firm

To the Shareholders and Board of Directors
Ero Copper Corp.

Opinion on Internal Control Over Financial Reporting

We have audited Ero Copper Corp. and subsidiaries' (the Company) internal control over financial reporting as of December 31, 2024, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2024, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the consolidated statements of financial position of the Company as of December 31, 2024 and 2023, the related consolidated statements of operations and comprehensive (loss) income, cash flow and changes in shareholders' equity, for each of the years in the two-year period ended December 31, 2024, and the related notes (collectively, the consolidated financial statements), and our report dated March 6, 2025 expressed an unqualified opinion on those consolidated financial statements.

Basis for Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Discussion Analysis under the heading "Disclosure Controls and Procedures and Internal Control over Financial Reporting". Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures

that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Ero Copper Corp.

Consolidated Statements of Changes in Shareholders' Equity

(Amounts in thousands of US Dollars, except share and per share amounts)

1. Nature of Operations

Ero Copper Corp. ("Ero" or the "Company") was incorporated on May 16, 2016 under the Business Corporations Act (British Columbia) and maintains its head office at Suite 1050, 625 Howe Street, Vancouver, British Columbia, Canada, V6C 2T6. The Company's shares are publicly traded on the Toronto Stock Exchange and the New York Stock Exchange under the symbol "ERO".

The Company's primary asset is its 99.6% ownership interest in Mineração Caraíba S.A. ("MCSA"), held indirectly through its wholly-owned subsidiary, Ero Brasil Participações Ltda. The Company also currently owns a 97.6% ownership interest in NX Gold S.A. ("NX Gold") indirectly through its wholly-owned subsidiary, Ero Gold Corp. ("Ero Gold").

MCSA is a Brazilian copper company which holds a 100% interest in the Caraíba Operations, located in the State of Bahia, and the Tucumã Operation, located in the southeastern part of the State of Pará. MCSA's predominant activity is the production and sale of copper concentrates, with gold and silver produced and sold as by-products.

NX Gold is a Brazilian gold mining company which holds a 100% interest in the Xavantina Operations and is focused on the production and sale of gold as its main product and silver as its by-product. The Xavantina Operations are located approximately 18 kilometers west of the town of Nova Xavantina, in southeastern State of Mato Grosso, Brazil.

2. Basis of Preparation

(a) Statement of Compliance

These consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") and interpretations of the International Financial Reporting Interpretations Committee.

These consolidated financial statements were authorized for issue by the Board of Directors of the Company (the "Board") on March 6, 2025.

(b) Basis of Presentation and Principles of Consolidation

These consolidated financial statements have been prepared on a historical cost basis except for derivative financial instruments, which are measured at fair value through profit or loss.

These consolidated financial statements include the accounts of the Company and its subsidiaries. Subsidiaries are entities controlled by the Company. Control over a subsidiary is defined to exist when the Company is exposed to variable returns from involvement with an investee and has the ability to affect the returns through power over the investee. All intercompany balances and transactions are eliminated upon consolidation.

Since the Company does not own 100% of its interests in MCSA and NX Gold, the interest attributable to non-controlling shareholders is reflected in non-controlling interests. Adjustments to non-controlling interests that do not involve the loss of control are accounted for as equity transactions and adjustments are based on a proportionate amount of the net assets of the subsidiary.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(c) Foreign Currency Translation

The functional currency and presentation currency of the Company is the US dollar. The monetary assets and liabilities of the Company that are denominated in foreign currencies are translated at the rate of exchange at the statement of financial position date while non-monetary assets and liabilities are translated at historical rates. Revenues and expenses are translated at the exchange rates approximating those in effect on the date of the transactions. Exchange gains and losses arising on translation are included in profit or loss.

The functional currency of all of the Company's Brazilian subsidiaries is the Brazilian Real ("BRL"). The assets and liabilities of its Brazilian subsidiaries are translated into the US dollar presentation currency using the exchange rate at the statement of financial position date while revenues and expenses are translated at the exchange rates approximating those in effect on the date of the transactions. Exchange gains and losses arising on translation are included in a separate component of shareholders' equity.

(d) Use of Estimates and Judgments

In preparing these financial statements, management has made judgments, estimates and assumptions that affect the application of the Company's accounting policies and the reported amounts of the assets, liabilities, revenues and expenses.

The estimates and assumptions are reviewed on an ongoing basis. Revisions to estimates are recognized prospectively.

Critical Judgments

Functional currency

The functional currency of the Company and each of its subsidiaries is the currency of the primary economic environment in which the entities operate. The Company has determined that the functional currency for the Company is the US dollar while the functional currency for all of its Brazilian subsidiaries is the BRL. Assessment of functional currency involves certain judgments to determine the primary economic environment and the Company reconsiders the functional currency of its entities if there is a change in events and conditions which determined the primary economic environment.

Legal claims and contingent liabilities

The recognition of legal provisions and contingent liabilities involves the assessment of claims made against the Company and each of its subsidiaries. The recognition of a legal provision, or disclosure of a contingent liability, involves certain judgments to determine the probability of whether a cash outflow will occur. In making this judgment, management has assessed various criteria and also relies on the opinions of its legal advisers to assist in making this assessment.

Commencement of Commercial Production

Determining when a mine under construction is substantially complete and ready for its intended use requires significant judgement. The criteria the Company used to make that determination for the Tucumã Operation included, amongst other things:

- the ability of the mine to produce salable product (i.e. the ability to produce metal within specifications),

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

- throughput of the processing plant reach a predefined percentage of design capacity over a reasonable period,
- processing plant recoveries reaching a pre-defined percentage of expected recoveries.

After evaluating the above factors, the Company concluded that the Tucumã Operation had not achieved commercial production as of December 31, 2024, and therefore, is not yet ready for its intended use.

Key Sources of Estimation Uncertainty

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of assets and liabilities at the date of the consolidated financial statements and the reported amounts of expenses during the reporting periods. Actual results could differ from those estimates and such differences could be significant. Significant estimates made by management affecting the consolidated financial statements include:

Derivative instruments

The fair value of derivative instruments is determined using either present value techniques or option pricing models that utilize a variety of inputs that are a combination of quoted prices and market-corroborated inputs, including assumptions for forward interest and foreign exchange rates, volatilities and discount rates. The fair value of the Company's derivative contracts includes an adjustment for credit risk for either the Company or the counter party as applicable. Changes in the assumptions for inputs into the models affect the fair value of the derivatives recognized in the statement of financial position as well as the unrealized gains or losses recognized in net income.

Carrying amounts of mineral properties and associated mine closure and reclamation costs

Changes in mineral reserves and resources information could impact depreciation and depletion rates, asset carrying amounts and the provisions for mine closure and reclamation costs. The Company determines its mineral reserves and resources based on information compiled by competent individuals. Mineral reserves and resources information is used in the calculation of depreciation, depletion and determination, when applicable, of the recoverable amount of CGUs, and for forecasting the timing of reclamation and closure cost expenditures.

There are numerous uncertainties inherent in estimating mineral reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the estimation methodology, forecasted prices of commodities, exchange rates, production costs or recovery rates may change the economic status of mineral reserves and may, ultimately, result in changes in the mineral reserves.

Mine closure and reclamation costs

Significant estimates and assumptions are made in determining the provision for mine closure and reclamation costs as there are numerous factors that will affect the ultimate liability payable. These factors include estimation of the extent and cost of rehabilitation activities, timing of future cash flows, discount rates, inflation rate, and regulatory requirements.

Changes in the above factors can result in a change to the provision recognized by the Company. Changes to mine closure and rehabilitation costs are recorded with a corresponding change to the carrying amounts of related mineral properties, plant and equipment. Adjustments to the carrying amounts of related mineral properties, plant and equipment can result in a change to future depreciation and depletion expense.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Income taxes

The determination of the Company's tax expense for the period and deferred tax assets and liabilities involves significant estimation and judgment by management. In determining these amounts, management interprets tax legislation in a variety of jurisdictions and makes estimates of the expected timing of the reversal of deferred tax assets and liabilities. Management also makes estimates of future earnings, which affect the extent to which potential future tax benefits may be used. The Company is subject to assessments by various taxation authorities, which may interpret legislation differently. These differences may affect the final amount or the timing of the payment of taxes. The Company provides for such differences where known based on management's best estimate of the probable outcome of these matters.

The Company operates in Brazil where tax authorities may audit income tax treatments and the resolution of such audits may span multiple years. Tax law in Brazil is complex and often subject to changes and to varied interpretations; accordingly, the ultimate outcome with respect to income tax treatments may differ from the amounts recognized. The Company's assessment of whether it is probable that uncertain income tax treatments will be accepted by tax authorities in Brazil is a significant management judgment.

Deferred Revenue

Judgment and estimates were required in determining the accounting for the precious metal purchase agreement ("PMPA") with RGLD Gold AG, a subsidiary of Royal Gold Inc. (collectively "Royal Gold"), which is accounted for as deferred revenue in accordance with IFRS 15 *Revenue from Contracts with Customers* ("IFRS 15"). As the Company's obligation under the precious metal purchase agreement will be satisfied through deliveries of a non-financial item (i.e. deliveries of gold ounces), rather than cash or other financial assets, it was determined to be entered into and continued to be held for the purpose of the delivery of a non-financial item in accordance with the Company's expected sale or usage requirements and thus not within the scope of IFRS 9 *Financial Instruments* ("own use exemption"). The determination of whether the own use exemption applies requires management's judgements.

Each period management estimates the cumulative amount of the deferred revenue obligation that has been satisfied and, therefore, recognized as revenue. Key inputs into the estimate of the amount of deferred revenue that should be recognized include the following:

- a. Future gold prices were used at inception of the contract to estimate the expected total consideration to be received under the contract including variable consideration and is used as the stand alone selling price to allocate the consideration to each ounce of gold to be delivered to Royal Gold, and
- b. Expected life of mine gold production and the timing thereof, which is estimated based on the approved life of mine for the NX Gold mine and estimated proven and probable reserves.

Expected credit loss provision

Significant estimates and assumptions are made in determining the expected credit loss provision for financial assets that are measured at amortized costs as there are numerous factors that will affect the ultimate asset receivable. These factors include exposure at default, the expected recovery, the discount rate, and the timing of expected cash flow.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(e) New Accounting Policies, Standards and Interpretations

On January 1, 2024, the Company adopted the following amendments to accounting standards:

- In January 2020, the IASB issued *Classification of Liabilities as Current or Non-current (Amendments to IAS 1)* which amended IAS 1, *Presentation of Financial Statements* ("IAS 1"), to clarify the requirements for presenting liabilities in the statement of financial position. The amendments specify that the Company must have the right to defer settlement of a liability for at least 12 months after the reporting period for the liability to be classified as non-current. In addition, the amendments clarify that: (a) the Company's right to defer settlement must exist at the end of the reporting period; (b) classification is unaffected by management's intentions or expectations about whether the Company will exercise its right to defer settlement; (c) if the Company's right to defer settlement is subject to the Company complying with specified conditions, the right exists at the end of the reporting period only if the Company complies with those conditions at the end of the reporting period, even if the lender does not test compliance until a later date; and (d) the term settlement includes the transfer of the Company's own equity instruments to the counterparty that results in the extinguishment of the liability, except when the settlement of the liability with the Company transferring its own equity instruments is at the option of the counterparty and such option has been classified as an equity instrument, separate from the host liability.
- In October 2022, the IASB issued amendment *Non-current Liabilities with Covenants* to IAS 1 to clarify that covenants of loan arrangements which the Company must comply with only after the reporting date would not affect classification of a liability as current or non-current at the reporting date. The amendment also introduces additional disclosure requirements related to such covenants to include: (i) the nature of the covenants and the date by which the Company must comply with the covenants; (ii) the carrying amount of the related liabilities; and (iii) facts and circumstances, if any, that indicate that the Company may have difficulty complying with covenants.

The adoption of these amendments did not have a material impact on the Company's consolidated financial statements.

(f) Future Changes in Accounting Policies Not Yet Effective as of December 31, 2024

In April 2024, the IASB issued IFRS 18, *Presentation and Disclosure in Financial Statements* ("IFRS 18") to replace IAS 1. IFRS 18 introduces two newly required subtotals on the face of the income statement, which includes operating profit and profit or loss before financing and income tax, and three new income statement classifications, which are operating, investing, and financing. In addition, IFRS 18 requires non-IFRS management performance measures that are subtotals of income and expenses to be disclosed on financial statement. IFRS 18 also provides additional guidance on principles of aggregation and disaggregation which apply to the primary financial statements and the notes. IFRS 18 will not affect the recognition and measurement of items in the financial statements, nor will it affect which items are classified in other comprehensive income and how these items are classified. The standard is effective for reporting periods beginning on or after January 1, 2027. Retrospective application is required and early application is permitted. The Company is currently assessing the effect of this new standard on our financial statements.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

3. Material Accounting Policies

(a) Revenue

Revenue relating to the sale of metals is recognized at the point the customer obtains control of the product and when the Company has satisfied its performance obligations. Control is transferred when title has passed to the purchaser, the product is physically delivered to the customer, the customer controls the risks and rewards of ownership and the Company has a present right to payment for the product, which is generally when the concentrate or doré is delivered to a location designated by the customer, or when gold credits are transferred to the customer. Revenue from the sale of metals is recognized on a net basis, after metal deductions, smelting, refining and other charges.

The sales amount is typically based on quoted market and contractual prices which are fixed at the time the shipment is received at the customers' premises. In certain circumstances the sales price of metals in concentrate may be determined in a period subsequent to the date of sale (provisionally priced sales) based on the terms of specific copper concentrate contracts. Provisionally priced sales are recognized based on an estimate of metal contained using forward market prices corresponding with the expected date that final sales prices will be fixed. The period between provisional pricing and final settlement can be up to one month. The settlement receivable is recorded at fair value each reporting period by reference to forward market prices until the date of final pricing, with the changes in fair value recorded as an adjustment to revenue.

Deferred revenue primarily consists of payments received by the Company in consideration for future commitments to deliver an amount of gold equivalent to a percentage of the gold produced from its NX Gold operations. As gold deliveries are made, the Company recognizes a portion of the deferred revenue as revenue, calculated on a per unit basis using the total number of gold ounces expected to be delivered over the life of the mine. The current portion of deferred revenue is based on deliveries anticipated over the next twelve months.

Interest expense on deferred revenue is recognized in finance costs as there is a significant financing component related to the precious metal purchase agreement, resulting from a difference in the timing of the upfront consideration received and delivery of the gold. The interest rate is based on the rate implicit in the precious metal purchase agreement at the date of inception.

The additional consideration to be received under the precious metal purchase agreement is considered variable, subject to changes in the total estimated gold ounces to be delivered and gold prices. Changes to variable consideration are accounted for prospectively as a cumulative catch-up and are recorded in revenue in profit or loss.

(b) Finance Income and Finance Expense

Finance income includes interest on cash and cash equivalents, restricted cash and financial investments, and gains related to changes in the fair value of financial assets measured at fair value through profit or loss. Interest income is recognized as it accrues in profit or loss, using the effective interest method.

Finance expense comprises of interest expense on loans and borrowings, accretion expense on provisions, leases and deferred revenue, commitment fees and losses related to changes in the fair value of financial assets measured at fair value through profit or loss and expected credit losses. Borrowing costs that are not directly attributable to the acquisition, construction or production of a qualifying asset are recognized in profit or loss using the effective interest method.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(c) Taxation

Current income tax is the expected tax payable or receivable on the taxable income or loss for the year using tax rates enacted or substantively enacted at the reporting date.

Deferred income tax is recognized in respect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Deferred income tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, based on the tax laws that have been enacted or substantively enacted at the reporting date. Deferred income tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities and assets, and they relate to income taxes levied by the same tax authority on the same taxable entity. Deferred income tax is not recognized for the initial recognition of assets or liabilities in a transaction that is not a business combination, that affects neither accounting nor taxable income or loss, and does not give rise to equal taxable and deductible temporary differences at the time of the transaction, differences related to investments in subsidiaries to the extent that it is probable that they will not reverse in the foreseeable future, and taxable differences arising from the initial recognition of goodwill.

A deferred income tax asset is recognized for unused tax losses, tax credits and deductible temporary differences, to the extent that it is probable that future taxable profits will be available against which they can be utilized. Deferred income tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realized.

Uncertainties over income tax treatments are evaluated on the basis of whether it is probable that they will be accepted upon examination by the relevant taxing authorities including Brazil. These uncertainties impact the amount of income taxes recognized. If it is determined that an uncertain income tax treatment is not probable of being accepted, the effect of the uncertain income tax treatment is reflected in the determination of income taxes based the most likely amount or, if there are a wide range of possible outcomes, the expected value.

(d) Tax Incentive

The Company receives certain tax incentives in Brazil. These tax incentives are recognized in profit or loss in the period the incentives are received or receivable and recorded against the expenditure that they are intended to compensate.

(e) Inventories

Inventories are measured at the lower of cost and net realizable value. The cost of consumable inventory is determined on a weighted average acquisition cost basis. Cost of stockpile inventory, products in progress and finished goods is determined based on a weighted average production cost basis and includes the cost of mining and processing ore including direct labour and materials; depreciation and amortization; and an appropriate share of production overheads based on normal operating capacity.

Net realizable value of stockpile inventory, products in progress and finished goods is the estimated selling price in the ordinary course of business, less estimated completion costs and selling expenses. Write-downs of inventories to net

realizable value are included in the cost of sales in the period of the write-down. A write-down of inventories is reversed in a subsequent period if there is a subsequent increase in the net realizable value of the related inventories.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(f) Mineral Properties, Plant and Equipment

Mineral properties, plant and equipment is measured at acquisition or construction cost less accumulated depreciation and accumulated impairment losses.

(i) Acquisition and disposal

The cost of mineral properties, plant and equipment include expenditures directly attributable to an asset's acquisition. The cost of assets constructed by Company includes the cost of materials and direct labor, any other costs to bring the asset in the place and conditions required to be operated in the manner intended by management including advances on long lead items, mine closure and rehabilitation costs, and borrowing costs on qualifying assets.

When parts of mineral properties, plant and equipment have different useful lives, they are accounted for as separate items (major components) of mineral properties, plant and equipment.

Gains and losses on disposal of mineral properties, plant and equipment are determined by comparing the proceeds from disposal with the carrying amount of equipment and are recognized net within other income.

(ii) Subsequent costs

The cost of replacing plant and equipment is recognized in the carrying amount of the item if it is probable that the future economic benefits embodied within the item will flow to the Company and its cost can be measured reliably. The carrying amount of the replaced item is derecognized. The maintenance service costs of plant and equipment are included in profit or loss.

(iii) Development and construction-in-progress

When economically viable mineral reserves have been determined and the decision to proceed with development has been approved, exploration and evaluation assets are first assessed for impairment, then reclassified to construction-in-progress or mineral properties. The expenditures related to development and construction are capitalized as construction-in-progress. Borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset that takes a substantial period of time to get ready for its intended use are capitalized as part of construction-in-progress until the asset is substantially ready for its intended use. Construction-in-progress is not depreciated.

Once an asset is available for use, construction-in-progress costs are reclassified to mineral properties or plant and equipment.

Pre-production costs of removing overburden to access ore in the open pit mines and developing access headings in the underground mines are capitalized as pre-production stripping or development costs respectively and are included within mineral properties, plant and equipment.

(iv) Mineral properties

Mineral properties consist of the cost of acquiring and developing mineral properties. Once in production, mineral properties are amortized on a units-of-production basis over the component of the ore body to which they relate.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(v) Stripping costs and development in the production phase

Where open pit production stripping or underground development activities do not result in inventory produced, but does provide improved access to the ore body, the costs are classified as mineral properties when these activities meet all of the following criteria: (1) it is probable that the future economic benefit associated with the activity will flow to the Company; (2) the Company can estimate the mineral reserve of the ore body for which access has been improved; and (3) the costs relating to the activity associated with that mineral reserve can be measured reliably.

For underground mines, costs incurred to access a mineral reserve of the ore body are capitalized to mineral properties or construction-in-progress and are depreciated on a units-of-production basis over the expected useful life of the identified mineral reserve of the ore body to which access has been improved as a result of the development activity. For open pit mines, stripping costs above average life of mine strip ratio (waste/ore) are capitalized to mineral properties or construction-in-progress and are depreciated over the related mineral reserves accessed by the stripping activity.

(vi) Depreciation

Items of mineral properties, plant and equipment are depreciated based on the estimated economic useful life of each component as follows:

Buildings	Lessor of life of mine or up to 25 years
Mining equipment	4 years / units of production
Mobile equipment & other assets	5 years
Mineral properties	Units of production
Mine closure and rehabilitation costs	Units of production or period until remediation
Right of use assets	Shorter of the term of lease and life of asset

The depletion of mineral properties and mine closure and rehabilitation costs is determined based on the ratio of tonnes of copper/kilogram of gold contained in the ore mined and total proven and probable mineral reserve tonnes of contained copper/kilogram of contained gold.

Depreciation methods, useful lives and residual values are reviewed at each financial year end and adjusted if appropriate.

(g) Exploration and Evaluation Assets

Exploration and evaluation costs relate to the initial search for a mineral deposit, the cost of acquisition of a mineral properties interest or exploration rights and the subsequent evaluation to determine the economic potential of the mineral deposit. The exploration and evaluation stage commences when the Company obtains the legal right or license to begin exploration. Once the legal rights or license is obtained, exploration and evaluation expenses are capitalized as exploration and evaluation assets. Costs incurred prior to the Company obtaining the legal rights are expensed.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

When the exploration and evaluation of a mineral properties indicates that development of the mineral properties is technically and commercially feasible, the future economic benefits are probable, and the Company has the intention and sufficient resources to complete the development and use or sell the asset, the related costs are transferred from exploration and evaluation assets to mineral properties, plant and equipment.

Management reviews the carrying value of capitalized exploration costs for indicators that the carrying value is impaired at least annually and when facts and circumstances suggest that the carrying amount may exceed the recoverable amount. The review is based on the Company's intentions for further exploration and development of the undeveloped property, results of drilling, commodity prices and other economic and geological factors. Subsequent recovery of the resulting carrying value depends on successful development or sale of the undeveloped project. If a property does not prove viable, all non-recoverable costs associated with the project, net of any previous impairment provisions, are written off.

(h) Financial Instruments*Non-derivative financial assets*

The Company classifies its financial assets in the following categories: at fair value through profit or loss ("FVTPL"), at fair value through other comprehensive income ("FVTOCI") or at amortized cost. The classification depends on the purpose for which the financial assets were acquired. Management determines the classification of its financial assets at initial recognition. Measurement and classification of financial assets is dependent on the Company's business model for managing the financial assets and the contractual cash flow characteristics of the financial asset. Financial assets are derecognized when they mature or are sold, and substantially all the risks and rewards of ownership have been transferred.

Classification and measurement

The Company has assessed the classification and measurement of its financial assets and financial liabilities under IFRS 9 in the following table:

	Measurement Category
Financial Assets	
Cash and cash equivalents	Amortized Cost
Short-term investments	Amortized Cost
Trade receivables related to provisional priced sales	Fair value through profit or loss
Derivatives	Fair value through profit or loss
Notes and other receivables	Amortized Cost
Deposits	Amortized Cost
Financial Liabilities	
Trade payables	Amortized Cost
Loans and borrowings	Amortized Cost
Derivatives	Fair value through profit or loss

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Financial assets at FVTPL

Financial assets carried at FVTPL are initially recorded at fair value and transaction costs are expensed in the income statement. Realized and unrealized gains and losses arising from changes in the fair value of the financial asset held at FVTPL are included in profit or loss in the period in which they arise.

Financial assets at amortized cost

Financial assets at amortized cost are initially recognized at fair value and subsequently carried at amortized cost less any impairment. They are classified as current assets or non-current assets based on their maturity date. Gains and losses on derecognition of financial assets classified amortized cost are recognized in profit or loss.

Financial liabilities

Financial liabilities, other than derivative instruments, are recognized initially at fair value, net of transaction costs incurred, and are subsequently measured at amortized cost. Any difference between the amounts originally received, net of transaction costs, and the redemption value is recognized in profit and loss over the period to maturity using the effective interest method.

Derivative instruments

Derivative instruments, including embedded derivatives in executory contracts or financial liability contracts, are classified as at FVTPL and, accordingly, are recorded in the statement of financial position at fair value. Unrealized gains and losses on derivatives are recorded as part of the revenue or expense item to which the derivative relates, depending on the nature of the derivative. Fair values for derivative instruments are determined using inputs based on market conditions existing at the balance sheet date or settlement date of the derivative. Derivatives embedded in non-derivative contracts are recognized separately unless they are closely related to the host contract.

Fair values

A number of the Company's accounting policies and disclosures require the measurement of fair values, for both financial and non-financial assets and liabilities.

When measuring the fair value of an asset or liability, the Company uses observable market data, as much as possible. Fair values are classified into different levels in a hierarchy based on the inputs used in the valuation techniques, as follows:

- **Level 1:** quoted prices (without adjustments) in active markets for identical assets or liabilities.
- **Level 2:** inputs other than Level 1 quoted prices, that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

- **Level 3:** inputs, for assets or liabilities, that are not based on observable market information (non-observable inputs).

The Company recognizes transfers between levels of the hierarchy of fair value at the end of the reporting period during which the change occurred.

When applicable, additional information on the assumptions used in the fair value calculations are disclosed in the specific notes of the corresponding asset or liability.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(i) Impairment***i) Financial assets***

The Company recognizes a loss allowance for expected credit losses on financial assets that are measured at amortized cost. At each reporting date, the loss allowance for the financial asset is measured at an amount equal to the lifetime expected credit losses if the credit risk on the financial asset has increased significantly since initial recognition. If at the reporting date, the financial asset has not increased significantly since initial recognition, the loss allowance is measured for the financial asset at an amount equal to twelve months' expected credit losses. For trade receivables the Company applies the simplified approach to providing for expected credit losses, which allows the use of a lifetime expected loss provision. Impairment losses on financial assets carried at amortized cost are reversed in subsequent periods if the amount of the loss decreases and the decrease can be objectively related to an event occurring after the impairment was recognized. The expected lifetime credit loss provision for trade receivables is based on historical counterparty default rates and adjusted for relevant forward-looking information, when required.

ii) Non-Financial assets

At each reporting date, the carrying amounts of the Company's mineral properties, plant and equipment and exploration and evaluation assets are reviewed to determine whether there is any indication that those assets are impaired. If such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. The recoverable amount is the higher of fair value less costs to sell and value in use, which is the present value of future cash flows expected to be derived from the asset or its related cash generating unit. For purposes of impairment testing, assets are grouped at the lowest levels that generate cash inflows from continuing use that are largely independent of the cash inflows of other assets or groups of assets (the "cash-generating unit").

If the recoverable amount of an asset or cash-generating unit is estimated to be less than its carrying amount, the carrying amount of the associated assets are reduced to their recoverable amount and the impairment loss is recognized in the profit or loss for the period.

Impairment losses recognized in prior periods are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment charge is reversed through profit or loss only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of any applicable depreciation, if no impairment loss had been recognized.

(j) Provisions

A provision is recognized when the Company has a present legal or constructive obligation as a result of a past event that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are calculated based on the expected future cash flows discounted, if material, at a pre-tax rate that reflects the current market assessments of the time value of money and the risks specific to the liability. The discount is unwound over the period over which the cash flows are expected to be incurred with the related expense included in finance expense.

The Company records the present value of estimated costs of legal and constructive obligations related to mine closure and rehabilitation in the period in which the obligation occurs. Mine closure and rehabilitation activities include facility decommissioning and dismantling; removal and treatment of waste materials; site and land rehabilitation, including compliance with and monitoring of environmental regulations; and related costs required to perform this work and/or operate equipment designed to reduce or eliminate environmental effects. The provision is adjusted each period for new disturbances, and changes in regulatory requirements, the estimated amount of future cash flows required to discharge the obligation, the

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

timing of such cash flows and the pre-tax discount rate specific to the liability. The unwinding of the discount is recognized in profit or loss as a finance expense.

When the provision is initially recognized, the corresponding cost is included in the carrying amount of the related asset and is amortized to profit or loss on a unit-of-production basis.

(k) Share-Based Compensation

The Company issues share based payment awards to employees and consultants, including directors and officers ("Eligible Persons"). The grant date fair value of equity settled share based payment awards is recognized as share-based compensation, with a corresponding increase in equity, over the vesting period. The amount recognized as an expense is based on management's best estimate of the number of equity instruments expected to vest. The cumulative amount expensed is adjusted at the end of each reporting period to reflect changes in the number of instruments expected to vest.

Performance share units and deferred share units are liability awards settled in cash and measured at the quoted market price at the grant date with the corresponding expense recognized over vesting period. The corresponding liability is adjusted for changes in fair value at each subsequent reporting date until the awards are settled. The performance share units liability is also adjusted to reflect the number of awards for which the related service and non-market vesting conditions are expected to be performed or satisfied.

(l) Leases

The Company recognizes a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is initially measured at cost, and subsequently at cost less any accumulated depreciation and impairment losses, and adjusted for certain re-measurements of the lease liability. The cost of the right-of-use asset includes the amount of the initial measurement of the lease liability, any lease payments made at or before the commencement date, less any lease incentives received, any initial direct costs; and if applicable, an estimate of costs to be incurred by the Company in dismantling and removing the underlying asset, restoring the site on which it is located or restoring the underlying asset to the condition required by the terms and conditions of the lease.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate. The incremental borrowing rate reflects the rate of interest that the lessee would have to pay to borrow the funds necessary to obtain an asset of similar value in a similar economic environment with similar terms and conditions. Generally, the Company uses its incremental borrowing rate as the discount rate.

The lease liability is subsequently increased by the interest cost on the lease liability and decreased by lease payments made. It is remeasured when there is a change in future lease payments arising from a change in an index or rate, a change in the estimate of the amount expected to be payable under a residual value guarantee, or as appropriate, changes in the assessment of whether a purchase or extension option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised.

The Company does not recognize right-of-use assets and lease liabilities for leases of low-value assets and leases with lease terms that are less than 12 months. Lease payments associated with these leases are instead recognized as an expense over the lease term on either a straight-line basis, or another systematic basis if more representative of the pattern of benefit.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(m) Income or Loss per Share

Basic income or loss per share is calculated by dividing the net income attributable to common shareholders of the Company by the weighted average number of common shares outstanding during the period. Diluted income per common share is calculated by adjusting the weighted average number of common shares outstanding for the effect of conversion of all potentially dilutive share equivalents, such as stock options and share units. The dilutive effect of share options assumes that the receipt of proceeds upon exercise of the options are used to repurchase common shares at the average market price during the period. The net effect of the shares issued less the shares assumed to be repurchased is added to the basic weighted average shares outstanding. For equity-settled share units (as defined herein, see note 15(f)), the common shares to be included in the diluted per share calculation is based on the number of shares that would be issuable if the reporting date were the end of the vesting period.

4. Segment Disclosure

Operating segments are determined by the way information is reported and used by the Company's Chief Operating Decision Maker ("CODM") to review operating performance. The Company monitors the operating results of its operating segments independently for the purpose of making decisions about resource allocation and performance assessment.

For the year ended December 31, 2024, the Company's reporting segments include its three operating mines in Brazil, the Caraíba Operations, the Tucumã Operation, and the Xavantina Operations, and its corporate head office in Canada. Significant information relating to the Company's reportable segments is summarized in the tables below:

(1) Mineral properties include \$57.9 million (2023 - \$72.4 million) of costs on expansion of near-mine resource potential which are not currently being depreciated.

(2) Additions to projects in progress was net of \$10.1 million in value added taxes that were transferred to other receivables during the year ended December 31, 2024 as a result of the completion of a

recoverability assessment.

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

8. Exploration and Evaluation Assets

As at December 31, 2024, the Company had \$11.4 million (2023 - \$29.9 million) in exploration and evaluation assets, which include several property option agreements.

In 2024, the Company completed the exercise of various option agreements to expand near-mine resource potential at the Caraiba Operations. Consequently, \$11.7 million was reclassified from exploration and evaluation assets to mineral properties during the period.

In June 2024, the Company terminated the Fides option agreement, resulting in a write-down of \$10.7 million in exploration and evaluation assets for the year ended December 31, 2024.

In July 2024, the Company signed a definitive earn-in agreement (the "Agreement") with Salobo Metais S.A, a subsidiary of Vale Base Metals ("VBM"), for the Furnas copper project ("Furnas Project") located in the Carajás Mineral Province in Pará State, Brazil. The Agreement contemplates the Company earning a 60% interest in the Project upon completion of three phases of work:

- Phase 1: Ero to conduct a minimum of 28,000 meters of exploration drilling and produce a scoping study within 18 months of signing the Agreement
- Phase 2: Ero to conduct an additional minimum of 17,000 meters of exploration drilling and produce a pre-feasibility study within 18 months of completing Phase 1
- Phase 3: Ero to conduct an additional minimum of 45,000 meters of exploration drilling, unless otherwise mutually agreed, and produce a definitive feasibility study ("DFS") within 24 months of completing Phase 2

Following the completion of a DFS, subject to customary technical review periods, and with Ero positive investment approval, the parties will enter into a joint venture agreement whereby VBM will transfer 60% of the equity interest in the Furnas Project to Ero, and Ero will grant VBM a "free carry" on certain capital expenditures related to development of the Furnas Project.

Prior to a positive Ero investment decision and the formation of a joint venture, VBM will retain 100% ownership of the Furnas Project with Ero solely responsible for funding the phased exploration and engineering work programs as well as ongoing payments to maintain the property in good standing.

As at December 31, 2024, exploration and evaluation assets include \$4.9 million in expenditures associated with the Furnas Project.

(a) Senior Notes

In February 2022, the Company issued \$400 million aggregate principal amount of senior unsecured notes (the “Senior Notes”). The Company received net proceeds of \$392.0 million after transaction costs of \$8.0 million. The Senior Notes mature on February 15, 2030 and bear annual interest at 6.5%, payable semi-annually in February and August of each year.

MCSA has provided a guarantee of the Senior Notes on a senior unsecured basis. The Senior Notes are direct, senior obligations of the Company and MCSA, and are not secured by any mortgage, pledge or charge.

The Senior Notes are subject to early redemption options by the Company. On or after February 15, 2025, the Company has the option, in whole or in part, to redeem the Senior Notes at a price ranging from 103.25% to 100% of the principal amount together with accrued and unpaid interest, if any, to the date of redemption, with the rate decreasing based on the length of time the Senior Notes are outstanding.

Upon the occurrence of specific kinds of changes of control triggering events, each holder of the Senior Notes will have the right to cause the Company to repurchase some or all of its Senior Notes at 101% of their principal amount, plus accrued and unpaid interest to, but not including, the repurchase date.

The Senior Notes are recognized as financial liabilities, net of unamortized transaction costs, and measured at amortized cost using an effective interest rate of 6.7%.

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

(b) Senior Credit Facility

The Company has a Senior Revolving Credit Facility ("Senior Credit Facility") with a borrowing limit of \$150.0 million which matures from December 2026 to December 2028. Amounts drawn on the Senior Credit Facility bear interest on a sliding scale at a rate of SOFR plus 2.00% to 4.50% depending on the Company's consolidated total leverage ratio. Commitment fees for any undrawn portion of the Senior Credit Facility are based on a sliding scale between 0.45% to 1.01%. As at December 31, 2024, the Senior Credit Facility bears an weighted average interest rate of 8.06% on its drawn balance and a commitment fee of 0.79% on its undrawn balance.

During the year ended December 31, 2024, the Company drew down a total of \$155.0 million from its Senior Credit Facility and repaid \$20.0 million of the principal amount of the facility. As a result, the net drawdown on the Senior Credit Facility for the year ended December 31, 2024 was \$135.0 million.

The Senior Credit Facility is secured by the shares of MCSA, NX Gold and Ero Gold. The Company is required to comply with certain financial covenants, which are required to be tested at each quarter end. These covenants include (a) a total leverage ratio based on total indebtedness to rolling four quarters adjusted earnings before interest, taxes, depreciation and amortization ("Rolling EBITDA"); (b) a total leverage ratio based on senior indebtedness to Rolling EBITDA; and (c) an interest coverage ratio based on Rolling EBITDA. The Senior Credit Facility provides for negative covenants customary for this type of facilities and permits additional equipment debt and finance leases of up to \$50.0 million. As at December 31, 2024, the Company is in compliance with these financial covenants.

(c) Copper Prepayment Facility

In May 2024, the Company entered into a non-priced copper prepayment facility with a bank syndicate. Under this facility, the Company received net proceeds of \$49.6 million, representing gross proceeds of \$50.0 million less transaction costs of \$0.4 million. The Company has the option to increase the size of the non-priced copper prepayment facility from \$50.0 million to \$75.0 million until March 31, 2025.

In exchange, the Company is obligated to repay the \$50.0 million facility over 27 equal monthly installments, beginning in October 2024, through the delivery of a minimum of 272 tonnes of copper each month. The copper to be delivered by the Company will be in the form of LME Copper Warrants. Each monthly delivery's value will be determined based on prevailing market copper prices at the time of delivery. Should the value of any delivery exceed the amount of the monthly installment payment of \$2.1 million, the excess value will be repaid to the Company. During the year ended December 31, 2024, the Company repaid three monthly installment payments totaling \$6.4 million, including \$5.6 million of principal and \$0.8 million of interest.

As the contractual obligation of the facility will be settled in the form of financial assets, the facility is accounted for as a financial liability measured at amortized cost using the effective interest rate method. Transaction costs are included in the initial measurement of the liability and amortized over the term of the facility.

The facility is secured by the shares of MCSA, NX Gold and Ero Gold.

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

12. Deferred Revenue

In August 2021, the Company entered into a precious metals purchase agreement (the "NX Gold PMPA") with RGLD Gold AG ("Royal Gold"), a wholly-owned subsidiary of Royal Gold, Inc., in relation to gold production from the Xavantina Operations. The Company received upfront cash consideration of \$100.0 million for the purchase of 25% of an equivalent amount of gold to be produced from the Xavantina mine until 93,000 ounces of gold have been delivered and thereafter decreasing to 10% of gold produced over the remaining life of the mine. The contract will be settled by the Company delivering gold to Royal Gold. Royal Gold will make ongoing payments equal to 20% of the then prevailing spot gold price for each ounce of gold delivered until 49,000 ounces of gold have been delivered and 40% of the prevailing spot gold price for each ounce of gold delivered thereafter. Additional advances may be made by Royal Gold based on the Company achieving certain milestones as set out in the NX Gold PMPA.

The movements in NX Gold PMPA deferred revenue during the year ended December 31, 2024 are comprised of the following:

	December 31, 2024	December 31, 2023
Gold ounces delivered ⁽¹⁾	15,917	14,005

Accretion expense	2,501	3,032
Amortization of deferred revenue ⁽²⁾	(18,310)	(17,082)
Balance, end of year	\$ 62,989	\$ 75,549
Current portion	\$ 14,758	\$ 17,159
Non-current portion	48,231	58,390

(1) During the year ended December 31, 2024, the Company delivered 15,917 ounces of gold (December 31, 2023 - 14,005 ounces) to Royal Gold for average consideration of \$473 per ounce (December 31, 2023 - \$386 per ounce). At December 31, 2024, a cumulative 45,177 ounces (December 31, 2023 - 29,260 ounces) of gold have been delivered under the NX Gold PMPA.

(2) Amortization of deferred revenue during the year ended December 31, 2024 is net of \$3.0 million (December 31, 2023 - \$2.5 million) related to change in estimate attributed to advances received and change in life-of-mine production estimates.

As part of the NX Gold PMPA, the Company pledged its equity interest in Ero Gold and NX Gold to Royal Gold as collateral and provided unsecured limited recourse guarantees from Ero and NX Gold.

As of December 31, 2024, current portion of deferred revenue also includes a \$17.0 million customer advance, which is related to copper concentrate to be delivered in the first quarter of 2025.

Balance, end of year	<u>\$ 28,657</u>	<u>\$ 26,687</u>
Caraíba Operations	\$ 20,689	\$ 21,372
Tucumã Project	3,868	1,365
Xavantina Operations	4,100	3,950
Total	<u>\$ 28,657</u>	<u>\$ 26,687</u>
Current portion ⁽¹⁾	\$ 6,766	\$ —
Non-current portion	<u>21,891</u>	<u>26,687</u>

(1) Included in accounts payable and accrued liabilities.

(2) Included \$4.6 million recognized in other expenses related to revisions to rehabilitation and closure plans and cost estimates at the Company's historic mining operations that have entered the closure phase, and for which there are no substantive future economic value.

Provision for rehabilitation and closure costs is measured using management's assumptions and estimates for future cash outflows in relation to mine closure and rehabilitation activities based on known disturbances as at the reporting date, known legal requirements and cost estimates prepared by a third-party specialist.

Management used a pre-tax discount rates in the range of 11.17% – 12.92% (2023 – 8.50% - 9.79%) and an inflation factor in the range of 3.50% - 4.96% (2023 – 3.50% - 3.90%) in preparing the Company's provision for rehabilitation and closure costs. The cash expenditures are expected to commence upon projected closure and occur over a period of time, which for the Caraíba Operations is in a range from 2025 to 2051, for the Xavantina Operations is 2030 to 2038, and for the Tucumã Project is from 2036 to 2041.

14. Other Non-current Liabilities

	<u>\$ 21,850</u>	<u>\$ 18,158</u>

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

15. Share Capital

As at December 31, 2024, the Company's authorized share capital consists of an unlimited number of common shares without par value. As at December 31, 2024, 103,555,211 common shares were outstanding (December 31, 2023 - 102,747,558).

In November 2023, the Company completed a bought deal share offering of 9,010,000 common shares at a price of \$12.35 per common share for gross proceeds of \$111.3 million, or net proceeds of 104.3 million after share issuance costs.

(a) Options

A continuity of the issued and outstanding options is as follows:

	Year Ended December 31,			
	2024		2023	
	Number of Stock Options	Weighted Average Exercise Price (CAD)	Number of Stock Options	Weighted Average Exercise Price (CAD)
Outstanding stock options, beginning of year	1,886,325	\$ 19.03	2,781,074	\$ 15.49
Issued	473,365	21.00	525,138	18.00
Exercised	(551,818)	20.57	(1,333,199)	11.28
Forfeited	(73,265)	19.13	(86,688)	18.59
Outstanding stock options, end of year	1,734,607	\$ 19.07	1,886,325	\$ 19.03

The weighted average share price on the date of exercise for options exercised during the year ended December 31, 2024 was CAD\$29.45 (year ended December 31, 2023 - CAD\$17.69).

As at December 31, 2024, the following stock options were outstanding:

Weighted Average Exercise Prices	Number of Stock Options	Vested and Exercisable Number of Stock Options	Weighted Average Remaining Life in Years
\$10.01 to \$20.00 CAD	1,226,780	837,707	2.80
\$20.01 to \$25.35 CAD	507,827	66,838	4.60
\$19.07 CAD (\$13.25 USD)	1,734,607	904,545	3.33

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

The fair value of options granted was determined using the Black-Scholes option pricing model. The weighted average inputs used in the measurement of fair values at grant date of the options are the following:

	Year Ended December 31,	
	2024	2023
Expected term (years)	3.4	3.2
Forfeiture rate	— %	— %
Volatility	51 %	54 %
Dividend yield	— %	— %
Risk-free interest rate	2.90 %	3.99 %
Weighted-average fair value per option	\$ 5.90	\$ 6.38

(b) Performance Share Unit Plan

The Company has a performance share unit ("PSU") plan pursuant to which the Compensation Committee may grant PSUs to Eligible Persons of the Company or its subsidiaries. Each PSU entitles the holder thereof to receive one common share, its equivalent cash value, or a combination of both, on the redemption date at the discretion of the Compensation Committee.

The continuity of PSUs issued and outstanding is as follows:

	Year Ended December 31,	
	2024	2023
Outstanding balance, beginning of year	967,921	881,788
Issued	357,792	437,204
Settled	(249,694)	(238,881)
Forfeited	(61,514)	(112,190)
Outstanding balance, end of year	1,014,505	967,921

These PSUs will vest three years from the date of grant by the Compensation Committee and the number of PSUs that will vest may range from 0% to 200% of the number granted, subject to the satisfaction of certain market and non-market performance conditions. Each vested PSU entitles the holder thereof to receive on or about the applicable date of vesting of such share unit (i) one common share; (ii) a cash amount equal to the fair market value of one common share as at the applicable date of vesting; or (iii) a combination of (i) and (ii), as determined by the Compensation Committee in its sole discretion. The Company has elected to settle its PSUs using a combination of cash and common shares in the past. As such, based on its history of past settlements, PSUs are classified as liabilities.

For PSUs with non-market performance conditions, the fair value of the share units granted was initially recognized at the fair value using the share price at the date of grant, and subsequently remeasured at fair value on each balance sheet date. For PSUs with market performance conditions, the fair value was determined using a Geometric Brownian Motion model. As at December 31, 2024, the fair value of the PSU liability was \$6.6

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

million (December 31, 2023 - \$6.5 million) of which \$4.1 million (December 31, 2023 - \$3.9 million) was recognized in accounts payable and accrued liabilities and the remainder in other non-current liabilities.

(c) Deferred Share Unit Plan

The Deferred Share Unit ("DSU") plan was established by the Board as a component of compensation for the Company's independent directors. Pursuant to the DSU Plan, DSUs may only be settled by way of cash payment. A participant is not entitled to payment in respect of the DSUs until his or her death, retirement or removal from the Board. The settlement amount of each DSU is based on the fair market value of a common share on the DSU redemption date multiplied by the number of DSUs being redeemed.

The continuity of DSUs issued and outstanding is as follows:

	Year ended December 31,	
	2024	2023
Outstanding balance, beginning of year	307,312	219,961
Issued	67,006	87,351
Settled	(49,207)	—
Outstanding balance, end of year	325,111	307,312

At December 31, 2024, DSU liabilities had a fair value of \$4.4 million (December 31, 2023 - \$4.9 million) which has been recognized in accounts payable and accrued liabilities.

(d) Restricted Share Unit Plan

The Company has a restricted share unit ("RSU") plan pursuant to which the Compensation Committee may grant share units to Eligible Persons of the Company or its subsidiaries. The fair value of these restricted share units is determined on the date of grant using the market price of the Company's shares. Each RSU entitles the holder thereof to receive one common share, its equivalent cash value, or a combination of both, on the redemption date at the discretion of the Compensation Committee. The RSUs are equity classified based on the history of past settlements.

During the year ended December 31, 2024, the Company granted 163,904 RSUs (year ended December 31, 2023 - 203,537) to employees of the Company at weighted average fair value of \$14.91 per share (year ended December 31, 2023 - \$15.59). The total fair value of these RSUs on the grant date was \$2.4 million (year ended December 31, 2023 - \$3.2 million).

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

The continuity of RSUs issued and outstanding is as follows:

	Year ended December 31,	
	2024	2023
Outstanding balance, beginning of year	340,570	263,202
Issued	163,904	203,537
Settled	(162,996)	(95,456)
Forfeited	(13,298)	(30,713)
Outstanding balance, end of year	328,180	340,570

(e) Share-based compensation

	Year ended December 31,	
	2024	2023
Stock options	\$ 2,739	\$ 1,574
Performance share unit plan	3,605	4,093
Deferred share unit plan	1,086	1,756
Restricted share unit plan	2,553	1,795
Share-based compensation ⁽¹⁾	\$ 9,983	\$ 9,218

(1) For the year ended December 31, 2024, the Company recorded \$5.3 million (year ended December 31, 2023 - \$3.4 million) of share-based compensation in contributed surplus, and the remaining share-based compensation was recorded in liabilities.

(f) Net (Loss) Income per Share

	Year ended December 31,	
	2024	2023
Weighted average number of common shares outstanding	103,106,305	94,111,548
Dilutive effects of:

Deferred tax liabilities	—	(10,863)

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Deferred tax assets of \$31.4 million (December 31, 2023 - \$35.1 million) have not been recognized for the following deductible temporary differences as it is not probable that the benefits of these temporary differences will be realized:

	Year ended December 31, 2024		Year ended December 31, 2023	
	Brazil	Canada	Brazil	Canada
Mineral properties, plant and equipment	\$ 31,236	\$ 873	\$ 39,959	\$ 1,150
Non-capital losses	—	40,831	—	74,238
Other	—	67,770	—	33,731
	<u>\$ 31,236</u>	<u>\$ 109,474</u>	<u>\$ 39,959</u>	<u>\$ 109,119</u>

The Company has loss carry forwards in Canada totaling \$103.4 million (December 31, 2023 - \$100.2 million) which may be carried forward for 20 years to offset future taxable income, which expire between 2036 and 2044. Additionally, the Company has loss carry forwards in Brazil totaling \$6.8 million (December 31, 2023 - nil) which do not expire and can be offset against future taxable income subject to 30% limitation of the current period taxable income.

22. Related Party Transactions

Key management personnel consist of the Company's directors and officers. The remuneration of key management personnel during the year was as follows:

	Year ended December 31,	
	2024	2023
Salaries and short-term benefits ⁽¹⁾	\$ 9,737	\$ 10,746
Share-based payments ⁽²⁾	8,280	8,156
	<u>\$ 18,017</u>	<u>\$ 18,902</u>

(1) Includes annual salary and short-term incentives or bonuses earned in the year.

(2) Includes PSUs, RSUs, DSUs and stock option grants.

23. Financial Instruments

Fair value

Fair values of financial assets and liabilities are determined based on available market information and valuation methodologies appropriate to each situation. Judgments are required in the interpretation of the market data to produce the most appropriate fair value estimates. The use of different market information and/or evaluation methodologies may have a material effect on the fair value amounts.

As at December 31, 2024, derivatives were measured at fair value based on Level 2 inputs.

The carrying values of cash and cash equivalents, short-term investments, accounts receivable, deposits, and accounts payable and accrued liabilities approximate their fair values due to their short terms to maturity or the discount rate used approximates to the contractual interest rate. At December 31, 2024, the carrying value of loans and borrowings, including accrued interest, was \$602.2 million while the fair value is approximately \$585.2 million. At December 31, 2024, the carrying value of notes receivable, including accrued interest, was \$12.0 million which approximates its fair value.

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations and arises principally from the Company's receivables from customers. The carrying amount of the financial assets below represents the maximum credit risk exposure as at December 31, 2024 and December 31, 2023:

	December 31, 2024	December 31, 2023
Cash and cash equivalents	\$ 50,402	\$ 111,738
Accounts receivable	18,399	5,710
Derivatives	—	11,254
Note receivable	12,009	17,413
Deposits and other assets	4,961	9,484
	<u>\$ 85,771</u>	<u>\$ 155,599</u>

The Company invests cash and cash equivalents with financial institutions that are financially sound based on their credit rating.

The Company's exposure to credit risk associated with accounts receivable is influenced mainly by the individual characteristics of each customer.

In 2022, one of the Company's customers in Brazil, Paranapanema S/A ("PMA"), filed for bankruptcy protection. As a preferred supplier to PMA, the Company had a note receivable arrangement with PMA, which was excluded from the judicial recovery process and provides the Company with certain judicial guarantees. According to the note receivable arrangement, repayment was structured over 24 monthly installments beginning in March 2024, with an annual interest rate equivalent to Brazil's CDI rate of approximately 11.65%.

At December 31, 2024, PMA is in default of the agreement and the gross amount of accounts and note receivable from PMA was \$20.7 million (December 31, 2023 - \$25.2 million). Accordingly, the note receivable is considered credit impaired, and the Company increased the expected credit loss provision by \$8.0 million in the year ended December 31, 2024 (provision of \$4.1 million for the year ended December 31, 2023). After adjusting for credit loss provision and present value discount of \$13.1 million (December 31, 2023 - \$7.7 million), the book value of the PMA note receivable at December 31, 2024 was \$7.6 million (December 31, 2023 - \$17.4 million.), of which \$3.9 million (December 31, 2023 - \$8.3 million) was included in other current assets.

Liquidity risk

Liquidity risk is the risk associated with the difficulties that the Company may have meeting the obligations associated with financial liabilities that are settled with cash payments or with another financial asset. The Company's approach to liquidity management is to ensure as much as possible that sufficient liquidity exists to meet their maturity obligations on the

expiration dates, under normal and stressful conditions, without causing unacceptable losses or with risk of undermining the normal operation of the Company.

The table below shows the Company's maturity of non-derivative financial liabilities on December 31, 2024:

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Non-derivative financial liabilities	Carrying value	Contractual cash flows	Up to 12 months	1 - 2 years	3 - 5 years	More than 5 years
Loans and borrowings (including interest)	\$ 602,189	\$ 791,475	\$ 74,251	\$ 105,989	\$ 611,235	\$ —
Accounts payable and accrued liabilities	95,120	95,120	95,120	—	—	—
Other non-current liabilities	5,825	5,825	—	4,771	666	388
Leases	17,885	19,431	11,995	6,398	1,038	—
Total	\$ 721,019	\$ 911,851	\$ 181,366	\$ 117,158	\$ 612,939	\$ 388

The Company also has a derivative financial liability for foreign exchange collar contracts whose notional amounts and maturity information are disclosed below under foreign exchange currency risk.

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity prices. The purpose of market risk management is to manage and control exposures to market risks, within acceptable parameters, while optimizing return.

The Company may use derivatives, including options, forwards and swap contracts, to manage market risks.

The Company's outstanding derivative instruments as of December 31, 2024 are as follows:

Contract Description	Notional Amount	Denomination	Weighted average floor	Weighted average cap / forward price	Maturities
Foreign exchange collar (i)	\$390.0 million	USD/BRL	5.43	6.49	January 2025 - December 2025
Gold collar (iii)	30,000 ounces	\$ / oz	\$2,200	\$3,425	January 2025 - December 2025

(i) Foreign exchange currency risk

The Company's subsidiaries in Brazil are exposed to exchange risks primarily related to the US dollar. In order to minimize currency mismatches, the Company monitors its cash flow projections considering future sales expectations indexed to US dollar variation in relation to the cash requirement to settle the existing financings.

The Company's exposure to foreign exchange currency risk at December 31, 2024 relates to \$60.0 million (December 31, 2023 – \$17.2 million) in loans and borrowings of MCSA denominated in US dollars and Euros. In addition, the Company is also exposed to foreign exchange currency risk at December 31, 2024 on \$513.6 million of intercompany loan balances (December 31, 2023 - \$342.2 million) which have contractual repayment terms. Strengthening (weakening) in the Brazilian Real against the US dollar at December 31, 2024 by 10% and 20%, would have decreased (increased) pre-tax net loss by \$57.3 million and \$114.6 million, respectively. This analysis is based on the foreign currency exchange variation rate that the Company considered to be reasonably possible at the end of the year and excluding the impact of the derivatives below. The analysis assumes that all other variables, especially interest rates, are held constant.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

The Company may use certain foreign exchange derivatives, including collars and forward contracts, to manage its foreign exchange risks. At December 31, 2024, the aggregate fair value of the Company's foreign exchange derivatives was a net liability of \$17.9 million (December 31, 2023 - asset of \$11.3 million), which is reflected in current portion of derivatives liabilities. The fair values of foreign exchange contracts were determined based on option pricing models, forward foreign exchange rates, and information provided by the counter party.

The change in fair value of foreign exchange derivatives was an unrealized loss of \$30.8 million for the year ended December 31, 2024 (a gain of \$7.6 million for the year ended December 31, 2023) and has been recognized in foreign exchange (loss) gain. In addition, during the year ended December 31, 2024, the Company recognized a realized loss of \$8.2 million (realized gain of \$11.4 million for the year ended December 31, 2023) related to the settlement of foreign currency forward collar contracts.

(ii) Interest rate risk

The Company is principally exposed to the variation in interest rates on loans and borrowings with variable rates of interest. Management reduces interest rate risk exposure by entering into loans and borrowings with fixed rates of interest or by entering into derivative instruments that fix the ultimate interest rate paid.

The Company is principally exposed to interest rate risk through its Senior Credit Facility and Brazilian Real denominated bank loans. Based on the Company's net exposure at December 31, 2024, a 1% change in the variable rates would not materially impact its pre-tax annual net income.

(iii) Price risk

The Company may use derivatives, including forward contracts, collars and swap contracts, to manage commodity price risks.

At December 31, 2024, the Company has entered into zero-cost gold collar contracts on 2,500 ounces of gold per month from January 2025 to December 2025, representing approximately 50% of its estimated production volumes for the period. As of December 31, 2024, the fair value of these contracts was a net liability of \$0.1 million (December 31, 2023 - nil). The fair value of gold collar contracts was determined based on option pricing models, forward gold price, and information provided by counter party. At December 31, 2024, the Company does not have any outstanding copper collar contracts (December 31, 2023 - liability of \$0.6 million).

During the year ended December 31, 2024, the Company recognized an unrealized gain of \$0.2 million (unrealized loss of \$0.1 million for the year ended December 31, 2023) and a realized loss of \$2.6 million (realized loss of \$1.8 million for the year ended December 31, 2023) in relation to its commodity derivatives in in other income or loss.

At December 31, 2024, the Company had provisionally priced sales that are exposed to commodity price changes (note 16). Based on the Company's net exposure at December 31, 2024, a 10% change in the price of copper would have changed pre-tax net income (loss) by \$6.1 million.

24. Capital Management

The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the development and production of its mine properties and to maintain a flexible capital structure for its projects for the benefit of its stakeholders.

The Company's capital consists of items included in shareholders' equity, debt facilities net of cash and cash equivalents.

Ero Copper Corp.

Notes to Consolidated Financial Statements

(Tabular amounts in thousands of US Dollars, except share and per share amounts)

Management reviews the capital structure on a regular basis to ensure that the above-noted objectives are met. The Company manages the capital structure and makes adjustments to it considering changes in the economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new loans and borrowings, common shares, or acquire or dispose of assets.

Certain loan agreements contain operating and financial covenants that could restrict the ability of the Company and its subsidiaries. MCSA, Ero Gold, and NX Gold, to, among other things, incur additional indebtedness needed to fund its respective operations, pay dividends or make other distributions, make investments, create liens, sell or transfer assets or enter into transactions with affiliates. There are no other restrictions or externally imposed capital requirements of the Company.

25. Supplemental Cash Flow Information

	Year ended December 31,	
	2024	2023
Net change in non-cash working capital items:		
Accounts receivable	\$ (13,985)	\$ 6,918
Inventories	(12,586)	(5,269)
Other assets	(17,636)	(11,694)
Accounts payable and accrued liabilities	(4,137)	1,673
Deferred revenue	22,654	2,440
	<u>\$ (25,690)</u>	<u>\$ (5,932)</u>
Non-cash investing and financing activities:		
Additions to property, plant and equipment by leases	\$ 18,012	\$ 20,019
Non-cash (decrease) increase in accounts payable in relation to capital expenditures	(4,848)	28,851
Change in mineral properties, plant and equipment from change in estimates for provision for rehabilitation and closure costs	7,890	3,119

26. Commitment and Contingencies

(a) Capital commitments

As at December 31, 2024, the Company has capital commitments, which is net of advances to suppliers, of \$51.2 million through contracts and purchase orders which are expected to be incurred over a six-year period. In the normal course of

operations, the Company may also enter into long-term contracts which can be cancelled with certain agreed customary notice periods without material penalties.

(b) Contingencies

Due to the size, complexity and nature of the Company's operations, it is subject to various investigations, claims, legal and tax proceedings covering matters that arise in the ordinary course of business. Based on the opinion of the Company's legal advisers, management considers provisions for its outstanding and pending legal claims to be adequate.

Each of these matters is subject to various uncertainties and it is possible that some of these matters may resolve unfavourably to the Company. In the opinion of management, based upon the information currently available, none of these matters are expected to have a material adverse effect on the results of operations or financial conditions of the Company. In the event that management's estimate of the future resolution of these matters changes, the Company will recognize the effect of these changes in its consolidated financial statements in the period in which such changes occur. As at December 31, 2024, the Company has recognized a provision related to certain matters of \$1.6 million (December 31, 2023 - \$1.6 million).

There are five administrative claims (2023 – five claims) filed by the Nacional Mining Agency regarding alleged differences in the calculation of certain sales taxes on mining revenue by MCSA. As at December 31, 2024, the estimated impact of the claims is \$6.6 million (December 31, 2023 - \$4.8 million). The Company, based on the opinion of its legal advisors, does not believe such claims will result in a probable cash outflow and as such no provision is recognized.

27. Subsequent Events

Subsequent to December 31, 2024, the Company amended its Senior Credit Facility ("Amended Senior Credit Facility") to increase the limit from \$150.0 million to \$200.0 million and to extend the maturity from December 2026 to December 2028. The interest rate and commitment fee on the Amended Senior Credit Facility were reduced to sliding scales of SOFR plus 2.00% to 4.25%, and 0.45% to 0.96%, respectively. Additionally, the total leverage ratio was replaced with net leverage ratio for the purposes of determining financial covenants and interest rates.

**CERTIFICATION REQUIRED BY RULE 13a-14(a) OR RULE 15d-14(a),
PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002**

I, Makko DeFilippo, certify that:

1. I have reviewed this annual report on Form 40-F of Ero Copper Corp.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the issuer as of, and for, the periods presented in this report;
4. The issuer's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the issuer and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the issuer's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation.
 - (d) Disclosed in this report any change in the issuer's internal control over financial reporting that occurred during the period covered by the annual report that has materially affected, or is reasonably likely to materially affect, the issuer's internal control over financial reporting.
5. The issuer's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the issuer's auditors and the audit committee of the issuer's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the issuer's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the issuer's internal control over financial reporting.

[Corporate information and
statement of IFRS
compliance \[abstract\]
Nature of Operations](#)

Nature of Operations

Ero Copper Corp. ("Ero" or the "Company") was incorporated on May 16, 2016 under the Business Corporations Act (British Columbia) and maintains its head office at Suite 1050, 625 Howe Street, Vancouver, British Columbia, Canada, V6C 2T6. The Company's shares are publicly traded on the Toronto Stock Exchange and the New York Stock Exchange under the symbol "ERO".

The Company's primary asset is its 99.6% ownership interest in Mineração Caraíba S.A. ("MCSA"), held indirectly through its wholly-owned subsidiary, Ero Brasil Participações Ltda. The Company also currently owns a 97.6% ownership interest in NX Gold S.A. ("NX Gold") indirectly through its wholly-owned subsidiary, Ero Gold Corp. ("Ero Gold").

MCSA is a Brazilian copper company which holds a 100% interest in the Caraíba Operations, located in the State of Bahia, and the Tucumã Operation, located in the southeastern part of the State of Pará. MCSA's predominant activity is the production and sale of copper concentrates, with gold and silver produced and sold as by-products.

NX Gold is a Brazilian gold mining company which holds a 100% interest in the Xavantina Operations and is focused on the production and sale of gold as its main product and silver as its by-product. The Xavantina Operations are located approximately 18 kilometers west of the town of Nova Xavantina, in southeastern State of Mato Grosso, Brazil.

Basis of Preparation

**12 Months Ended
Dec. 31, 2024**

[Corporate information and
statement of IFRS
compliance \[abstract\]
Basis of Preparation](#)

Basis of Preparation

(a) Statement of Compliance

These consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards Board (“IASB”) and interpretations of the International Financial Reporting Interpretations Committee.

These consolidated financial statements were authorized for issue by the Board of Directors of the Company (the “Board”) on March 6, 2025.

(b) Basis of Presentation and Principles of Consolidation

These consolidated financial statements have been prepared on a historical cost basis except for derivative financial instruments, which are measured at fair value through profit or loss.

These consolidated financial statements include the accounts of the Company and its subsidiaries. Subsidiaries are entities controlled by the Company. Control over a subsidiary is defined to exist when the Company is exposed to variable returns from involvement with an investee and has the ability to affect the returns through power over the investee. All intercompany balances and transactions are eliminated upon consolidation.

Since the Company does not own 100% of its interests in MCSA and NX Gold, the interest attributable to non-controlling shareholders is reflected in non-controlling interests. Adjustments to non-controlling interests that do not involve the loss of control are accounted for as equity transactions and adjustments are based on a proportionate amount of the net assets of the subsidiary.

(c) Foreign Currency Translation

The functional currency and presentation currency of the Company is the US dollar. The monetary assets and liabilities of the Company that are denominated in foreign currencies are translated at the rate of exchange at the statement of financial position date while non-monetary assets and liabilities are translated at historical rates. Revenues and expenses are translated at the exchange rates approximating those in effect on the date of the transactions. Exchange gains and losses arising on translation are included in profit or loss.

The functional currency of all of the Company's Brazilian subsidiaries is the Brazilian Real (“BRL”). The assets and liabilities of its Brazilian subsidiaries are translated into the US dollar presentation currency using the exchange rate at the statement of financial position date while revenues and expenses are translated at the exchange rates approximating those in effect on the date of the transactions. Exchange gains

and losses arising on translation are included in a separate component of shareholders' equity.

(d) **Use of Estimates and Judgments**

In preparing these financial statements, management has made judgments, estimates and assumptions that affect the application of the Company's accounting policies and the reported amounts of the assets, liabilities, revenues and expenses.

The estimates and assumptions are reviewed on an ongoing basis. Revisions to estimates are recognized prospectively.

Critical Judgments

Functional currency

The functional currency of the Company and each of its subsidiaries is the currency of the primary economic environment in which the entities operate. The Company has determined that the functional currency for the Company is the US dollar while the functional currency for all of its Brazilian subsidiaries is the BRL. Assessment of functional currency involves certain judgments to determine the primary economic environment and the Company reconsiders the functional currency of its entities if there is a change in events and conditions which determined the primary economic environment.

Legal claims and contingent liabilities

The recognition of legal provisions and contingent liabilities involves the assessment of claims made against the Company and each of its subsidiaries. The recognition of a legal provision, or disclosure of a contingent liability, involves certain judgments to determine the probability of whether a cash outflow will occur. In making this judgment, management has assessed various criteria and also relies on the opinions of its legal advisers to assist in making this assessment.

Commencement of Commercial Production

Determining when a mine under construction is substantially complete and ready for its intended use requires significant judgement. The criteria the Company used to make that determination for the Tucumã Operation included, amongst other things:

- the ability of the mine to produce salable product (i.e. the ability to produce metal within specifications),
- throughput of the processing plant reach a predefined percentage of design capacity over a reasonable period,
- processing plant recoveries reaching a pre-defined percentage of expected recoveries.

After evaluating the above factors, the Company concluded that the Tucumã Operation had not achieved commercial production as of December 31, 2024, and therefore, is not yet ready for its intended use.

Key Sources of Estimation Uncertainty

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of assets and liabilities at the date of the consolidated financial statements and the reported amounts of expenses during the reporting periods. Actual results could differ from those estimates and such differences could be significant. Significant estimates made by management affecting the consolidated financial statements include:

Derivative instruments

The fair value of derivative instruments is determined using either present value techniques or option pricing models that utilize a variety of inputs that are a combination of quoted prices and market-corroborated inputs, including assumptions for forward interest and foreign exchange rates, volatilities and discount rates. The fair value of the Company's derivative contracts includes an adjustment for credit risk for either the Company or the counter party as applicable. Changes in the assumptions for inputs into the models affect the fair value of the derivatives recognized in the statement of financial position as well as the unrealized gains or losses recognized in net income.

Carrying amounts of mineral properties and associated mine closure and reclamation costs

Changes in mineral reserves and resources information could impact depreciation and depletion rates, asset carrying amounts and the provisions for mine closure and reclamation costs. The Company determines its mineral reserves and resources based on information compiled by competent individuals. Mineral reserves and resources information is used in the calculation of depreciation, depletion and determination, when applicable, of the recoverable amount of CGUs, and for forecasting the timing of reclamation and closure cost expenditures.

There are numerous uncertainties inherent in estimating mineral reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the estimation methodology, forecasted prices of commodities, exchange rates, production costs or recovery rates may change the economic status of mineral reserves and may, ultimately, result in changes in the mineral reserves.

Mine closure and reclamation costs

Significant estimates and assumptions are made in determining the provision for mine closure and reclamation costs as there are numerous factors that will affect the ultimate liability payable. These factors include estimation of the extent and cost of rehabilitation activities, timing of future cash flows, discount rates, inflation rate, and regulatory requirements.

Changes in the above factors can result in a change to the provision recognized by the Company. Changes to mine closure and rehabilitation costs are recorded with a corresponding change to the carrying amounts of related mineral properties, plant and equipment. Adjustments to the carrying amounts of related mineral properties, plant and equipment can result in a change to future depreciation and depletion expense.

Income taxes

The determination of the Company's tax expense for the period and deferred tax assets and liabilities involves significant estimation and judgment by management. In determining these amounts, management interprets tax legislation in a variety of jurisdictions and makes estimates of the expected timing of the reversal of deferred tax assets and liabilities. Management also makes estimates of future earnings, which affect the extent to which potential future tax benefits may be used. The Company is subject to assessments by various taxation authorities, which may interpret legislation differently. These differences may affect the final amount or the timing of the payment of taxes. The Company provides for such differences where known based on management's best estimate of the probable outcome of these matters.

The Company operates in Brazil where tax authorities may audit income tax treatments and the resolution of such audits may span multiple years. Tax law in Brazil is complex and often subject to changes and to varied interpretations; accordingly, the ultimate outcome with respect to income tax treatments may differ from the amounts recognized. The Company's assessment of whether it is probable that uncertain income tax treatments will be accepted by tax authorities in Brazil is a significant management judgment.

Deferred Revenue

Judgment and estimates were required in determining the accounting for the precious metal purchase agreement ("PMPA") with RGLD Gold AG, a subsidiary of Royal Gold Inc. (collectively "Royal Gold"), which is accounted for as deferred revenue in accordance with IFRS 15 *Revenue from Contracts with Customers* ("IFRS 15"). As the Company's obligation under the precious metal purchase agreement will be satisfied through deliveries of a non-financial item (i.e. deliveries of gold ounces), rather than cash or other financial assets, it was determined to be entered into and continued to be held for the purpose of the delivery of a non-financial item in accordance with the Company's expected sale or usage requirements and thus not within the scope of IFRS 9 *Financial Instruments* ("own use exemption"). The determination of whether the own use exemption applies requires management's judgements.

Each period management estimates the cumulative amount of the deferred revenue obligation that has been satisfied and, therefore, recognized as revenue. Key inputs into the estimate of the amount of deferred revenue that should be recognized include the following:

- a. Future gold prices were used at inception of the contract to estimate the expected total consideration to be received under the contract including variable

- consideration and is used as the stand alone selling price to allocate the consideration to each ounce of gold to be delivered to Royal Gold, and
- b. Expected life of mine gold production and the timing thereof, which is estimated based on the approved life of mine for the NX Gold mine and estimated proven and probable reserves.

Expected credit loss provision

Significant estimates and assumptions are made in determining the expected credit loss provision for financial assets that are measured at amortized costs as there are numerous factors that will affect the ultimate asset receivable. These factors include exposure at default, the expected recovery, the discount rate, and the timing of expected cash flow.

(e) New Accounting Policies, Standards and Interpretations

On January 1, 2024, the Company adopted the following amendments to accounting standards:

- In January 2020, the IASB issued *Classification of Liabilities as Current or Non-current (Amendments to IAS 1)* which amended IAS 1, *Presentation of Financial Statements* ("IAS 1"), to clarify the requirements for presenting liabilities in the statement of financial position. The amendments specify that the Company must have the right to defer settlement of a liability for at least 12 months after the reporting period for the liability to be classified as non-current. In addition, the amendments clarify that: (a) the Company's right to defer settlement must exist at the end of the reporting period; (b) classification is unaffected by management's intentions or expectations about whether the Company will exercise its right to defer settlement; (c) if the Company's right to defer settlement is subject to the Company complying with specified conditions, the right exists at the end of the reporting period only if the Company complies with those conditions at the end of the reporting period, even if the lender does not test compliance until a later date; and (d) the term settlement includes the transfer of the Company's own equity instruments to the counterparty that results in the extinguishment of the liability, except when the settlement of the liability with the Company transferring its own equity instruments is at the option of the counterparty and such option has been classified as an equity instrument, separate from the host liability.
- In October 2022, the IASB issued amendment *Non-current Liabilities with Covenants* to IAS 1 to clarify that covenants of loan arrangements which the Company must comply with only after the reporting date would not affect classification of a liability as current or non-current at the reporting date. The amendment also introduces additional disclosure requirements related to such covenants to include: (i) the nature of the covenants and the date by which the Company must comply with the covenants; (ii) the carrying amount of the related liabilities; and (iii) facts and circumstances, if any, that indicate that the Company may have difficulty complying with covenants.

The adoption of these amendments did not have a material impact on the Company's consolidated financial statements.

(f) Future Changes in Accounting Policies Not Yet Effective as of December 31, 2024

In April 2024, the IASB issued IFRS 18, *Presentation and Disclosure in Financial Statements* ("IFRS 18") to replace IAS 1. IFRS 18 introduces two newly required subtotals on the face of the income statement, which includes operating profit and profit or loss before financing and income tax, and three new income statement classifications, which are operating, investing, and financing. In addition, IFRS 18 requires non-IFRS management performance measures that are subtotals of income and expenses to be disclosed on financial statement. IFRS 18 also provides additional guidance on principles of aggregation and disaggregation which apply to the primary financial statements and the notes. IFRS 18 will not affect the recognition and measurement of items in the financial statements, nor will it affect which items are classified in other comprehensive income and how these items are classified. The standard is effective for reporting periods beginning on or after January 1, 2027. Retrospective application is required and early application is permitted. The Company is currently assessing the effect of this new standard on our financial statements.

Material Accounting Policies

(a) Revenue

Revenue relating to the sale of metals is recognized at the point the customer obtains control of the product and when satisfied its performance obligations. Control is transferred when title has passed to the purchaser, the product is physical, the customer controls the risks and rewards of ownership and the Company has a present right to payment for the product. Revenue is generally when the concentrate or doré is delivered to a location designated by the customer, or when gold credits are received from the customer. Revenue from the sale of metals is recognized on a net basis, after metal deductions, smelting, refining and other costs.

The sales amount is typically based on quoted market and contractual prices which are fixed at the time the shipment is made to the customers' premises. In certain circumstances the sales price of metals in concentrate may be determined in a period subsequent to the sale (provisionally priced sales) based on the terms of specific copper concentrate contracts. Provisionally priced sales are based on an estimate of metal contained using forward market prices corresponding with the expected date that final sales prices will be determined. The difference between provisional pricing and final settlement can be up to one month. The settlement receivable is recorded at fair value at the end of the period by reference to forward market prices until the date of final pricing, with the changes in fair value recorded as an adjustment to revenue.

Deferred revenue primarily consists of payments received by the Company in consideration for future commitments to deliver gold. The deferred revenue is equivalent to a percentage of the gold produced from its NX Gold operations. As gold deliveries are made, the Company recognizes a portion of the deferred revenue as revenue, calculated on a per unit basis using the total number of gold ounces expected to be delivered from the mine. The current portion of deferred revenue is based on deliveries anticipated over the next twelve months.

Interest expense on deferred revenue is recognized in finance costs as there is a significant financing component related to the purchase agreement, resulting from a difference in the timing of the upfront consideration received and delivery of the gold. Interest is calculated based on the rate implicit in the precious metal purchase agreement at the date of inception.

The additional consideration to be received under the precious metal purchase agreement is considered variable, subject to changes in the total estimated gold ounces to be delivered and gold prices. Changes to variable consideration are accounted for prospectively as a catch-up and are recorded in revenue in profit or loss.

(b) Finance Income and Finance Expense

Finance income includes interest on cash and cash equivalents, restricted cash and financial investments, and gains related to the fair value of financial assets measured at fair value through profit or loss. Interest income is recognized as it accrues in proportion to the effective interest method.

Finance expense comprises of interest expense on loans and borrowings, accretion expense on provisions, leases and other financial liabilities, commitment fees and losses related to changes in the fair value of financial assets measured at fair value through profit or loss, and credit losses. Borrowing costs that are not directly attributable to the acquisition, construction or production of a qualifying asset are recognized in profit or loss using the effective interest method.

(c) Taxation

Current income tax is the expected tax payable or receivable on the taxable income or loss for the year using tax rates enacted or substantively enacted at the reporting date.

Deferred income tax is recognized in respect of temporary differences between the carrying amounts of assets and liabilities in the financial statements for reporting purposes and the amounts used for taxation purposes. Deferred income tax is measured at the tax rates that are expected to apply to temporary differences when they reverse, based on the tax laws that have been enacted or substantively enacted at the reporting date. Deferred income tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities with current tax assets, they relate to income taxes levied by the same tax authority on the same taxable entity. Deferred income tax is not recognized for temporary differences arising from the recognition of assets or liabilities in a transaction that is not a business combination, that affects neither accounting nor taxable income, and does not give rise to equal taxable and deductible temporary differences at the time of the transaction, differences relating to the recognition of intangible assets in subsidiaries to the extent that it is probable that they will not reverse in the foreseeable future, and taxable differences arising from the recognition of goodwill.

A deferred income tax asset is recognized for unused tax losses, tax credits and deductible temporary differences, to the extent it is probable that future taxable profits will be available against which they can be utilized. Deferred income tax assets are assessed at the reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realized.

Uncertainties over income tax treatments are evaluated on the basis of whether it is probable that they will be accepted by the relevant taxing authorities including Brazil. These uncertainties impact the amount of income taxes recognized. If it is probable that an uncertain income tax treatment is not probable of being accepted, the effect of the uncertain income tax treatment is recognized. The determination of income taxes based on the most likely amount or, if there are a wide range of possible outcomes, the expected outcome.

(d) Tax Incentive

The Company receives certain tax incentives in Brazil. These tax incentives are recognized in profit or loss in the period in which they are received or receivable and recorded against the expenditure that they are intended to compensate.

(e) Inventories

Inventories are measured at the lower of cost and net realizable value. The cost of consumable inventory is determined on a first-in, first-out acquisition cost basis. Cost of stockpile inventory, products in progress and finished goods is determined based on a weighted average production cost basis and includes the cost of mining and processing ore including direct labour and materials; depreciation and amortization and an appropriate share of production overheads based on normal operating capacity.

Net realizable value of stockpile inventory, products in progress and finished goods is the estimated selling price in the ordinary course of business, less estimated completion costs and selling expenses. Write-downs of inventories to net realizable value are recognized in the period of the write-down. A write-down of inventories is reversed in a subsequent period if there is a subsequent increase in the net realizable value of the related inventories.

(f) Mineral Properties, Plant and Equipment

Mineral properties, plant and equipment is measured at acquisition or construction cost less accumulated depreciation and impairment losses.

(i) Acquisition and disposal

The cost of mineral properties, plant and equipment include expenditures directly attributable to an asset's acquisition. The cost of an asset constructed by the Company includes the cost of materials and direct labor, any other costs to bring the asset in the place and condition in which it is to be operated in the manner intended by management including advances on long lead items, mine closure and rehabilitation costs and borrowing costs on qualifying assets.

When parts of mineral properties, plant and equipment have different useful lives, they are accounted for as separate items (components) of mineral properties, plant and equipment.

Gains and losses on disposal of mineral properties, plant and equipment are determined by comparing the proceeds from disposal with the carrying amount of equipment and are recognized net within other income.

(ii) Subsequent costs

The cost of replacing plant and equipment is recognized in the carrying amount of the item if it is probable that the future economic benefits embodied within the item will flow to the Company and its cost can be measured reliably. The carrying amount of the replaced item is derecognized. The maintenance service costs of plant and equipment are included in profit or loss.

(iii) Development and construction-in-progress

When economically viable mineral reserves have been determined and the decision to proceed with development has been made, exploration and evaluation assets are first assessed for impairment, then reclassified to construction-in-progress or mine development. Expenditures related to development and construction are capitalized as construction-in-progress. Borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset that takes a substantial period of time to get ready for its intended use are recognized as part of construction-in-progress until the asset is substantially ready for its intended use. Construction-in-progress is not reclassified to mineral properties, plant and equipment until the asset is available for use.

Once an asset is available for use, construction-in-progress costs are reclassified to mineral properties or plant and equipment.

Pre-production costs of removing overburden to access ore in the open pit mines and developing access headings in the underground mines are capitalized as pre-production stripping or development costs respectively and are included within mineral properties, plant and equipment.

(iv) Mineral properties

Mineral properties consist of the cost of acquiring and developing mineral properties. Once in production, mineral properties are depreciated on a units-of-production basis over the component of the ore body to which they relate.

(v) Stripping costs and development in the production phase

Where open pit production stripping or underground development activities do not result in inventory produced, but do result in access to the ore body, the costs are classified as mineral properties when these activities meet all of the following criteria: (1) that the future economic benefit associated with the activity will flow to the Company; (2) the Company can estimate the mineral reserve of the ore body for which access has been improved; and (3) the costs relating to the activity associated with that mineral reserve can be determined reliably.

For underground mines, costs incurred to access a mineral reserve of the ore body are capitalized to mineral properties during progress and are depreciated on a units-of-production basis over the expected useful life of the identified mineral reserve to which access has been improved as a result of the development activity. For open pit mines, stripping costs above average line (waste/ore) are capitalized to mineral properties or construction-in-progress and are depreciated over the related mineral reserve during the stripping activity.

(vi) Depreciation

Items of mineral properties, plant and equipment are depreciated based on the estimated economic useful life of each component.

Buildings	Lesser of life of mine or useful life
Mining equipment	4 years / units
Mobile equipment & other assets	
Mineral properties	Units
Mine closure and rehabilitation costs	Units of production or period until closure
Right of use assets	Shorter of the term of lease or useful life

The depletion of mineral properties and mine closure and rehabilitation costs is determined based on the ratio of tonnes of gold contained in the ore mined and total proven and probable mineral reserve tonnes of contained copper/kilogram of contained gold.

Depreciation methods, useful lives and residual values are reviewed at each financial year end and adjusted if appropriate.

(g) Exploration and Evaluation Assets

Exploration and evaluation costs relate to the initial search for a mineral deposit, the cost of acquisition of a mineral property, exploration rights and the subsequent evaluation to determine the economic potential of the mineral deposit. The exploration stage commences when the Company obtains the legal right or license to begin exploration. Once the legal rights or license is obtained, exploration and evaluation expenses are capitalized as exploration and evaluation assets. Costs incurred prior to the Company obtaining legal rights are expensed.

When the exploration and evaluation of a mineral properties indicates that development of the mineral properties is technically feasible, the future economic benefits are probable, and the Company has the intention and sufficient resources to complete the development and use or sell the asset, the related costs are transferred from exploration and evaluation assets to mineral properties, plant and equipment. Management reviews the carrying value of capitalized exploration costs for indicators that the carrying value is impaired at the end of each reporting period when facts and circumstances suggest that the carrying amount may exceed the recoverable amount. The review is based on the Company's intentions for further exploration and development of the undeveloped property, results of drilling, commodity prices and other geological factors. Subsequent recovery of the resulting carrying value depends on successful development or sale of the undeveloped property. If a property does not prove viable, all non-recoverable costs associated with the project, net of any previous impairment provisions, are written off.

(h) Financial Instruments

Non-derivative financial assets

The Company classifies its financial assets in the following categories: at fair value through profit or loss ("FVTPL"), at fair value through other comprehensive income ("FVTOCI") or at amortized cost. The classification depends on the purpose for which the financial assets are acquired. Management determines the classification of its financial assets at initial recognition. Measurement and classification of financial assets is dependent on the Company's business model for managing the financial assets and the contractual cash flow characteristics of the financial asset. Financial assets are derecognized when they mature or are sold, and substantially all the risks and rewards of ownership have been transferred.

Classification and measurement

The Company has assessed the classification and measurement of its financial assets and financial liabilities under IFRS 9 and is summarized in the table:

	Measurement Category
Financial Assets	
Cash and cash equivalents	Amortized Cost
Short-term investments	Amortized Cost
Trade receivables related to provisional priced sales	Fair value through profit or loss
Derivatives	Fair value through profit or loss
Notes and other receivables	Amortized Cost
Deposits	Amortized Cost
Financial Liabilities	
Trade payables	Amortized Cost
Loans and borrowings	Amortized Cost
Derivatives	Fair value through profit or loss

Financial assets at FVTPL

Financial assets carried at FVTPL are initially recorded at fair value and transaction costs are expensed in the income statement. Unrealized gains and losses arising from changes in the fair value of the financial asset held at FVTPL are included in profit or loss in which they arise.

Financial assets at amortized cost

Financial assets at amortized cost are initially recognized at fair value and subsequently carried at amortized cost less any impairment. They are classified as current assets or non-current assets based on their maturity date. Gains and losses on derecognition of financial assets at amortized cost are recognized in profit or loss.

Financial liabilities

Financial liabilities, other than derivative instruments, are recognized initially at fair value, net of transaction costs. They are subsequently measured at amortized cost. Any difference between the amounts originally received, net of transaction costs, and the amortized cost is recognized in profit and loss over the period to maturity using the effective interest method.

Derivative instruments

Derivative instruments, including embedded derivatives in executory contracts or financial liability contracts, are classified as financial assets or liabilities. They are recorded in the statement of financial position at fair value. Unrealized gains and losses on derivatives are recognized in the revenue or expense item to which the derivative relates, depending on the nature of the derivative. Fair values for derivatives are determined using inputs based on market conditions existing at the balance sheet date or settlement date of the derivative. Embedded derivatives in non-derivative contracts are recognized separately unless they are closely related to the host contract.

Fair values

A number of the Company's accounting policies and disclosures require the measurement of fair values, for both financial assets and liabilities.

When measuring the fair value of an asset or liability, the Company uses observable market data, as much as possible. Fair value measurements are categorized into different levels in a hierarchy based on the inputs used in the valuation techniques, as follows:

- **Level 1:** quoted prices (without adjustments) in active markets for identical assets or liabilities.

- **Level 2:** inputs other than Level 1 quoted prices, that are observable for the asset or liability, either directly (i.e. as quoted prices) or indirectly (i.e. derived from prices).
- **Level 3:** inputs, for assets or liabilities, that are not based on observable market information (non-observable inputs).

The Company recognizes transfers between levels of the hierarchy of fair value at the end of the reporting period during which the transfers occurred.

When applicable, additional information on the assumptions used in the fair value calculations are disclosed in the notes to the financial statements corresponding asset or liability.

(i) **Impairment**

ii) Financial assets

The Company recognizes a loss allowance for expected credit losses on financial assets that are measured at amortized cost. At each reporting date, the loss allowance for the financial asset is measured at an amount equal to the lifetime expected credit losses if the financial asset has increased significantly since initial recognition. If at the reporting date, the financial asset has not increased significantly since initial recognition, the loss allowance is measured for the financial asset at an amount equal to twelve months' expected credit losses. For trade receivables the Company applies the simplified approach to providing for expected credit losses, which allows the Company to recognize an expected loss provision. Impairment losses on financial assets carried at amortized cost are reversed in subsequent periods if the loss decreases and the decrease can be objectively related to an event occurring after the impairment was recognized. The credit loss provision for trade receivables is based on historical counterparty default rates and adjusted for relevant forward-looking information when required.

ii) Non-Financial assets

At each reporting date, the carrying amounts of the Company's mineral properties, plant and equipment and exploration and evaluation assets are reviewed to determine whether there is any indication that those assets are impaired. If such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. The recoverable amount is the higher of fair value less costs of disposal and value in use, which is the present value of future cash flows expected to be derived from the asset or its related cash-generating unit. For purposes of impairment testing, assets are grouped at the lowest levels that generate cash inflows from continuing operations that are independent of the cash inflows of other assets or groups of assets (the "cash-generating unit").

If the recoverable amount of an asset or cash-generating unit is estimated to be less than its carrying amount, the carrying amount of the asset or associated assets are reduced to their recoverable amount and the impairment loss is recognized in the profit or loss for the period.

Impairment losses recognized in prior periods are assessed at each reporting date for any indications that the loss has decreased. If such indication exists, an impairment charge is reversed through profit or loss only to the extent that the asset's carrying amount does not exceed the amount that would have been determined, net of any applicable depreciation, if no impairment loss had been recognized.

(j) **Provisions**

A provision is recognized when the Company has a present legal or constructive obligation as a result of a past event that has arisen, the obligation is reliably measurable, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are calculated as the expected future cash flows discounted, if material, at a pre-tax rate that reflects the current market assessments of the time value of money and the risks specific to the liability. The discount is unwound over the period over which the cash flows are expected to be incurred and the expense included in finance expense.

The Company records the present value of estimated costs of legal and constructive obligations related to mine closure and rehabilitation activities over the period in which the obligation occurs. Mine closure and rehabilitation activities include facility decommissioning and dismantling; treatment of waste materials; site and land rehabilitation, including compliance with and monitoring of environmental regulatory requirements; costs required to perform this work and/or operate equipment designed to reduce or eliminate environmental effects. The Company estimates the amount of future cash flows required for each period for new disturbances, and changes in regulatory requirements, the estimated amount of future cash flows required for the obligation, the timing of such cash flows and the pre-tax discount rate specific to the liability. The unwinding of the discount is recognized in finance expense.

When the provision is initially recognized, the corresponding cost is included in the carrying amount of the related asset and is amortized to profit or loss on a unit-of-production basis.

(k) Share-Based Compensation

The Company issues share based payment awards to employees and consultants, including directors and officers ("Eligible Employees"). The grant date fair value of equity settled share based payment awards is recognized as share-based compensation, with a corresponding increase in equity, over the vesting period. The amount recognized as an expense is based on management's best estimate of the fair value of the instruments expected to vest. The cumulative amount expensed is adjusted at the end of each reporting period to reflect changes in the estimate of instruments expected to vest.

Performance share units and deferred share units are liability awards settled in cash and measured at the quoted market price of the Company's common stock at the reporting date with the corresponding expense recognized over vesting period. The corresponding liability is adjusted for changes in the fair value of the Company's common stock from the reporting date until the awards are settled. The performance share units liability is also adjusted to reflect the number of shares that will be issued, which the related service and non-market vesting conditions are expected to be performed or satisfied.

(l) Leases

The Company recognizes a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is measured at cost, and subsequently at cost less any accumulated depreciation and impairment losses, and adjusted for certain re-measurements of the lease liability. The cost of the right-of-use asset includes the amount of the initial measurement of the lease liability, any lease payments made at or before the commencement date, less any lease incentives received, any initial direct costs; and if applicable, an estimate of the costs incurred by the Company in dismantling and removing the underlying asset, restoring the site on which it is located or restoring the condition required by the terms and conditions of the lease.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted by the interest rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate. The incremental borrowing rate reflects the rate of interest that the lessee would have to pay to borrow the funds necessary to obtain an asset of a similar economic environment with similar terms and conditions. Generally, the Company uses its incremental borrowing rate.

The lease liability is subsequently increased by the interest cost on the lease liability and decreased by lease payments made. When there is a change in future lease payments arising from a change in an index or rate, a change in the estimate of the amount of the lease payments to be payable under a residual value guarantee, or as appropriate, changes in the assessment of whether a purchase option or a termination option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised.

The Company does not recognize right-of-use assets and lease liabilities for leases of low-value assets and leases with terms of less than 12 months. Lease payments associated with these leases are instead recognized as an expense over the lease term on a straight-line basis, or another systematic basis if more representative of the pattern of benefit.

(m) Income or Loss per Share

Basic income or loss per share is calculated by dividing the net income attributable to common shareholders of the Company by the weighted average number of common shares outstanding during the period. Diluted income per common share is calculated by adjusting the weighted average number of common shares outstanding for the effect of conversion of all potentially dilutive equivalents, such as stock options and share units. The dilutive effect of share options assumes that the receipt of proceeds from the exercise of the options are used to repurchase common shares at the average market price during the period. The net number of shares issued less the shares assumed to be repurchased is added to the basic weighted average shares outstanding. For share units (as defined herein, see note 15(f)), the common shares to be included in the diluted per share calculation is the number of shares that would be issuable if the reporting date were the end of the vesting period.

Segment Disclosure

[Disclosure of operating segments \[abstract\]](#)
[Segment Disclosure](#)

12 Months Ended
Dec. 31, 2024

Segment Disclosure

Operating segments are determined by the way information is reported and used by the Company's Chief Operating Decision Maker to evaluate operating performance. The Company monitors the operating results of its operating segments independently for the purpose of resource allocation and performance assessment.

For the year ended December 31, 2024, the Company's reporting segments include its three operating mines in Brazil, the Caraíba Operation, and the Xavantina Operations, and its corporate head office in Canada. Significant information relating to the Company's segments is summarized in the tables below:

Year ended December 31, 2024	Caraíba (Brazil)	Xavantina (Brazil)	Tucumã (Brazil)	Corporate and Other
Revenue	\$ 311,777	\$ 127,303	\$ 31,179	\$
Cost of production	(158,006)	(30,055)	(4,805)	
Depreciation and depletion	(65,194)	(20,390)	(149)	
Sales expense	(7,443)	(1,969)	(1,695)

Exploration For And Evaluation Of Mineral Resources [Abstract]

Exploration and Evaluation Assets

Exploration and Evaluation Assets

As at December 31, 2024, the Company had \$11.4 million (2023 - \$29.9 million) in exploration and evaluation assets, which include several property option agreements.

In 2024, the Company completed the exercise of various option agreements to expand near-mine resource potential at the Caraiba Operations. Consequently, \$11.7 million was reclassified from exploration and evaluation assets to mineral properties during the period.

In June 2024, the Company terminated the Fides option agreement, resulting in a write-down of \$10.7 million in exploration and evaluation assets for the year ended December 31, 2024.

In July 2024, the Company signed a definitive earn-in agreement (the "Agreement") with Salobo Metais S.A, a subsidiary of Vale Base Metals ("VBM"), for the Furnas copper project ("Furnas Project") located in the Carajás Mineral Province in Pará State, Brazil. The Agreement contemplates the Company earning a 60% interest in the Project upon completion of three phases of work:

- Phase 1: Ero to conduct a minimum of 28,000 meters of exploration drilling and produce a scoping study within 18 months of signing the Agreement
- Phase 2: Ero to conduct an additional minimum of 17,000 meters of exploration drilling and produce a pre-feasibility study within 18 months of completing Phase 1
- Phase 3: Ero to conduct an additional minimum of 45,000 meters of exploration drilling, unless otherwise mutually agreed, and produce a definitive feasibility study ("DFS") within 24 months of completing Phase 2

Following the completion of a DFS, subject to customary technical review periods, and with Ero positive investment approval, the parties will enter into a joint venture agreement whereby VBM will transfer 60% of the equity interest in the Furnas Project to Ero, and Ero will grant VBM a "free carry" on certain capital expenditures related to development of the Furnas Project.

Prior to a positive Ero investment decision and the formation of a joint venture, VBM will retain 100% ownership of the Furnas Project with Ero solely responsible for funding the phased exploration and engineering work programs as well as ongoing payments to maintain the property in good standing.

As at December 31, 2024, exploration and evaluation assets include \$4.9 million in expenditures associated with the Furnas Project.

(a) Senior Notes

In February 2022, the Company issued \$400 million aggregate principal amount of senior unsecured notes (the "Senior Notes"). The proceeds of \$392.0 million after transaction costs of \$8.0 million. The Senior Notes mature on February 15, 2030 and bear annual interest at 6.50%, payable semi-annually in February and August of each year.

MCSA has provided a guarantee of the Senior Notes on a senior unsecured basis. The Senior Notes are direct, senior obligations of the Company and are not secured by any mortgage, pledge or charge.

The Senior Notes are subject to early redemption options by the Company. On or after February 15, 2025, the Company has the option to redeem the Senior Notes at a price ranging from 103.25% to 100% of the principal amount together with accrued and unpaid interest to the date of redemption, with the rate decreasing based on the length of time the Senior Notes are outstanding.

Upon the occurrence of specific kinds of changes of control triggering events, each holder of the Senior Notes will have the right to require the Company to repurchase some or all of its Senior Notes at 101% of their principal amount, plus accrued and unpaid interest to, but not including, the date of repurchase.

The Senior Notes are recognized as financial liabilities, net of unamortized transaction costs, and measured at amortized cost using the effective interest rate of 6.7%.

(b) Senior Credit Facility

The Company has a Senior Revolving Credit Facility ("Senior Credit Facility") with a borrowing limit of \$150.0 million which matures to December 2028. Amounts drawn on the Senior Credit Facility bear interest on a sliding scale at a rate of SOFR plus 2.00% to the Company's consolidated total leverage ratio. Commitment fees for any undrawn portion of the Senior Credit Facility are based on 0.45% to 1.01%. As at December 31, 2024, the Senior Credit Facility bears an weighted average interest rate of 8.06% on its commitment fee of 0.79% on its undrawn balance.

During the year ended December 31, 2024, the Company drew down a total of \$155.0 million from its Senior Credit Facility and repaid the principal amount of the facility. As a result, the net drawdown on the Senior Credit Facility for the year ended December 31, 2024 was \$0.0 million.

The Senior Credit Facility is secured by the shares of MCSA, NX Gold and Ero Gold. The Company is required to comply with covenants which are required to be tested at each quarter end. These covenants include (a) a total leverage ratio based on total indebtedness to adjusted earnings before interest, taxes, depreciation and amortization ("Rolling EBITDA"); (b) a total leverage ratio based on senior debt to EBITDA; and (c) an interest coverage ratio based on Rolling EBITDA. The Senior Credit Facility provides for negative covenants on the facilities and permits additional equipment debt and finance leases of up to \$50.0 million. As at December 31, 2024, the Company is in compliance with all financial covenants.

(c) Copper Prepayment Facility

In May 2024, the Company entered into a non-priced copper prepayment facility with a bank syndicate. Under this facility, the Company has drawn down of \$49.6 million, representing gross proceeds of \$50.0 million less transaction costs of \$0.4 million. The Company has the option to increase the non-priced copper prepayment facility from \$50.0 million to \$75.0 million until March 31, 2025.

In exchange, the Company is obligated to repay the \$50.0 million facility over 27 equal monthly installments, beginning in October 2024, of a minimum of 272 tonnes of copper each month. The copper to be delivered by the Company will be in the form of LME Copper. The value of each delivery's value will be determined based on prevailing market copper prices at the time of delivery. Should the value of any delivery be less than the monthly installment payment of \$2.1 million, the excess value will be repaid to the Company. During the year ended December 31, 2024, the Company repaid three monthly installment payments totaling \$6.4 million, including \$5.6 million of principal and \$0.8 million of interest.

As the contractual obligation of the facility will be settled in the form of financial assets, the facility is accounted for as a financial liability. The cost using the effective interest rate method. Transaction costs are included in the initial measurement of the liability and amortized over the term of the facility. The facility is secured by the shares of MCSA, NX Gold and Ero Gold.

Deferred Revenue

**12 Months Ended
Dec. 31, 2024**

[Revenue From Contracts
With Customers \[Abstract\]
Deferred Revenue](#)

Deferred Revenue

In August 2021, the Company entered into a precious metals purchase agreement (the "NX Gold PMPA") with RGLD Gold AG ("Royal Gold", a wholly owned subsidiary of Royal Gold, Inc.), in relation to gold production from the Xavantina Operations. The Company received upfront cash of \$100.0 million for the purchase of 25% of an equivalent amount of gold to be produced from the Xavantina mine until 93,000 ounces of gold have been delivered and thereafter decreasing to 10% of gold produced over the remaining life of the mine. The contract will be settled by the Company to Royal Gold. Royal Gold will make ongoing payments equal to 20% of the then prevailing spot gold price for each ounce of gold delivered until 93,000 ounces of gold have been delivered and 40% of the prevailing spot gold price for each ounce of gold delivered thereafter. Additional payments will be made by Royal Gold based on the Company achieving certain milestones as set out in the NX Gold PMPA.

The movements in NX Gold PMPA deferred revenue during the year ended December 31, 2024 are comprised of the following:

	December 31, 2024	
Gold ounces delivered ⁽¹⁾		15,917
Balance, beginning of year	\$	75,549 \$
Advances		3,249
Accretion expense		2,501
Amortization of deferred revenue ⁽²⁾		(18,310)
Balance, end of year	\$	62,989 \$
Current portion	\$	14,758 \$
Non-current portion		48,231

(1) During the year ended December 31, 2024, the Company delivered 15,917 ounces of gold (December 31, 2023 - 14,005 ounces) to Royal Gold for average price of \$386 per ounce (December 31, 2023 - \$386 per ounce). At December 31, 2024, a cumulative 45,177 ounces (December 31, 2023 - 29,260 ounces) of gold have been delivered to Royal Gold.

(2) Amortization of deferred revenue during the year ended December 31, 2024 is net of \$3.0 million (December 31, 2023 - \$2.5 million) related to change in estimate of gold production and change in life-of-mine production estimates.

As part of the NX Gold PMPA, the Company pledged its equity interest in Ero Gold and NX Gold to Royal Gold as collateral and provided non-recourse guarantees from Ero and NX Gold.

As of December 31, 2024, current portion of deferred revenue also includes a \$17.0 million customer advance, which is related to the concentrate to be delivered in the first quarter of 2025.

**Provision for rehabilitation
and closure costs**

Provision for rehabilitation and closure costs

	December 31, 2024	
Balance, beginning of year	26,687	\$
Change in estimates ⁽²⁾	12,499	
Accretion expense	2,339	
Settled	(5,870)	
Foreign exchange	(6,998)	
Balance, end of year	\$ 28,657	\$
Caraíba Operations	\$ 20,689	\$
Tucumã Project	3,868	
Xavantina Operations	4,100	
Total	\$ 28,657	\$
Current portion⁽¹⁾	\$ 6,766	\$
Non-current portion	21,891	

(1) Included in accounts payable and accrued liabilities.

(2) Included \$4.6 million recognized in other expenses related to revisions to rehabilitation and closure plans and cost estimates at the Company's historic mining operations, which are expected to occur during the closure phase, and for which there are no substantive future economic value.

Provision for rehabilitation and closure costs is measured using management's assumptions and estimates for future cash outflows in connection with rehabilitation activities based on known disturbances as at the reporting date, known legal requirements and cost estimates prepared by a cost estimation specialist.

Management used a pre-tax discount rates in the range of 11.17% – 12.92% (2023 – 8.50% - 9.79%) and an inflation factor of 3.50% - 4.96% (2023 – 3.50% - 3.90%) in preparing the Company's provision for rehabilitation and closure costs. The cash outflows are expected to commence upon projected closure and occur over a period of time, which for the Caraíba Operations is in a range from 2025 to 2051, for the Xavantina Operations is 2030 to 2038, and for the Tucumã Project is from 2036 to 2041.

Share Capital

As at December 31, 2024, the Company's authorized share capital consists of an unlimited number of common shares without par value. As at December 31, 2024, 103,555,211 common shares were outstanding (December 31, 2023 - 102,747,558).

In November 2023, the Company completed a bought deal share offering of 9,010,000 common shares at a price of \$12.35 per share. The net proceeds of the offering were \$111.3 million, or net proceeds of 104.3 million after share issuance costs.

(a) Options

A continuity of the issued and outstanding options is as follows:

	Year Ended December 31, 2024		
	Number of Stock Options	Weighted Average Exercise Price (CAD)	Number of Stock Options
Outstanding stock options, beginning of year	1,886,325	\$ 19.03	2,781,000
Issued	473,365	21.00	525,100
Exercised	(551,818)	20.57	(1,333,100)
Forfeited	(73,265)	19.13	(86,600)
Outstanding stock options, end of year	1,734,607	\$ 19.07	1,886,300

The weighted average share price on the date of exercise for options exercised during the year ended December 31, 2024 was \$19.07 (December 31, 2023 - CAD\$17.69).

As at December 31, 2024, the following stock options were outstanding:

Weighted Average Exercise Prices	Number of Stock Options	Vested and Exercisable Number of Stock Options
\$10.01 to \$20.00 CAD	1,226,780	837,707
\$20.01 to \$25.35 CAD	507,827	66,838
\$19.07 CAD (\$13.25 USD)	1,734,607	904,545

The fair value of options granted was determined using the Black-Scholes option pricing model. The weighted average inputs used in the model at grant date of the options are the following:

	Year Ended December 31, 2024	
Expected term (years)	3.4	
Forfeiture rate	— %	
Volatility	51 %	
Dividend yield	— %	
Risk-free interest rate	2.90 %	
Weighted-average fair value per option	\$ 5.90	\$

(b) Performance Share Unit Plan

The Company has a performance share unit ("PSU") plan pursuant to which the Compensation Committee may grant PSUs to the Company or its subsidiaries. Each PSU entitles the holder thereof to receive one common share, its equivalent cash value, or a combination thereof at the discretion of the Compensation Committee.

The continuity of PSUs issued and outstanding is as follows:

	Year Ended Dec
	2024
Outstanding balance, beginning of year	967,921
Issued	357,792
Settled	(249,694)
Forfeited	(61,514)
Outstanding balance, end of year	1,014,505

These PSUs will vest three years from the date of grant by the Compensation Committee and the number of PSUs that will vest may be determined by the number of the number granted, subject to the satisfaction of certain market and non-market performance conditions. Each vested PSU entitles the holder thereof to receive on or about the applicable date of vesting of such share unit (i) one common share; (ii) a cash amount equal to the fair market value of one common share as at the applicable date of vesting; or (iii) a combination of (i) and (ii), as determined by the Compensation Committee in its discretion. The Company has elected to settle its PSUs using a combination of cash and common shares in the past. As such, based on its history of settling PSUs, they are classified as liabilities.

For PSUs with non-market performance conditions, the fair value of the share units granted was initially recognized at the fair value of the common share on the date of grant, and subsequently remeasured at fair value on each balance sheet date. For PSUs with market performance conditions, the fair value was determined using a Geometric Brownian Motion model. As at December 31, 2024, the fair value of the PSU liability was \$6.6 million (December 31, 2023 - \$6.5 million) of which \$4.1 million (December 31, 2023 - \$3.9 million) was recognized in accounts payable and accrued liabilities and the remainder in other non-current liabilities.

(c) Deferred Share Unit Plan

The Deferred Share Unit ("DSU") plan was established by the Board as a component of compensation for the Company's independent directors. Pursuant to the DSU Plan, DSUs may only be settled by way of cash payment. A participant is not entitled to payment in respect of the DSU upon their retirement or removal from the Board. The settlement amount of each DSU is based on the fair market value of a common share on the date of settlement multiplied by the number of DSUs being redeemed.

The continuity of DSUs issued and outstanding is as follows:

	Year ended Dec
	2024
Outstanding balance, beginning of year	307,312
Issued	67,006
Settled	(49,207)
Outstanding balance, end of year	325,111

At December 31, 2024, DSU liabilities had a fair value of \$4.4 million (December 31, 2023 - \$4.9 million) which has been recognized in accounts payable and accrued liabilities.

(d) Restricted Share Unit Plan

The Company has a restricted share unit ("RSU") plan pursuant to which the Compensation Committee may grant share units to the Company or its subsidiaries. The fair value of these restricted share units is determined on the date of grant using the market price of the common shares of the Company. Each RSU entitles the holder thereof to receive one common share, its equivalent cash value, or a combination of both, on the date of settlement at the discretion of the Compensation Committee. The RSUs are equity classified based on the history of past settlements.

During the year ended December 31, 2024, the Company granted 163,904 RSUs (year ended December 31, 2023 - 203,537) to employees and directors at a weighted average fair value of \$14.91 per share (year ended December 31, 2023 - \$15.59). The total fair value of these RSUs on the date of grant was \$2.44 million (year ended December 31, 2023 - \$3.2 million).

The continuity of RSUs issued and outstanding is as follows:

	Year ended Dec
	2024
Outstanding balance, beginning of year	340,570
Issued	163,904
Settled	(162,996)
Forfeited	(13,298)
Outstanding balance, end of year	328,180

(e) Share-based compensation

	Year ended December 31, 2024	
	2024	
Stock options	\$ 2,739	\$
Performance share unit plan	3,605	
Deferred share unit plan	1,086	
Restricted share unit plan	2,553	
Share-based compensation ⁽¹⁾	<u>\$ 9,983</u>	<u>\$</u>

1) For the year ended December 31, 2024, the Company recorded \$5.3 million (year ended December 31, 2023 - \$3.4 million) of share-based compensation in contributed surplus, and the remaining share-based compensation was recorded in liabilities.

(f) Net (Loss) Income per Share

	Year ended December 31, 2024

\$	470,259

(1) Adjustments on provisional sales include both pricing and quantity adjustments. Provisionally priced sales to the Company's international customers are settled within zero to one month (December 31, 2023 - zero to four months) after shipment takes place and, therefore, are exposed to commodity price changes.

During the year ended December 31, 2024, the Company delivered 15,917 ounces of gold (year ended December 31, 2023 - 15,917 ounces of gold) under a precious metals purchase agreement with Royal Gold (note 12) for average cash consideration of \$473 per ounce (year ended December 31, 2023 - \$386 per ounces) and recognized \$18.3 million in amortization of deferred revenue (year ended December 31, 2023 - \$17.1 million). Amortization of deferred revenue during the year ended December 31, 2024 is net of \$3.0 million (December 31, 2023 - \$2.5 million) related to change in estimate attributed to advances received and change in life-of-mine production estimate.

[Financial Instruments](#)

[\[Abstract\]](#)

[Financial Instruments](#)

Financial Instruments

Fair value

Fair values of financial assets and liabilities are determined based on available market information and valuation methodologies appropriate to the assets and liabilities. Judgments are required in the interpretation of the market data to produce the most appropriate fair value estimates. The use of different assumptions and/or evaluation methodologies may have a material effect on the fair value amounts.

As at December 31, 2024, derivatives were measured at fair value based on Level 2 inputs.

The carrying values of cash and cash equivalents, short-term investments, accounts receivable, deposits, and accounts payable approximate their fair values due to their short terms to maturity or the discount rate used approximates to the contractual interest rate. The carrying value of loans and borrowings, including accrued interest, was \$602.2 million while the fair value is approximately \$58.0 million. As at December 31, 2024, the carrying value of notes receivable, including accrued interest, was \$12.0 million which approximates its fair value.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations. Credit risk is principally from the Company's receivables from customers. The carrying amount of the financial assets below represents the maximum exposure to credit risk as at December 31, 2024 and December 31, 2023:

	December 31, 2024	
Cash and cash equivalents	\$	50,402
Accounts receivable		18,399
Derivatives		—
Note receivable		12,009
Deposits and other assets		4,961
	\$	85,771

The Company invests cash and cash equivalents with financial institutions that are financially sound based on their credit rating.

The Company's exposure to credit risk associated with accounts receivable is influenced mainly by the individual characteristics of each customer.

In 2022, one of the Company's customers in Brazil, Parapanema S/A ("PMA"), filed for bankruptcy protection. As a preferred supplier, the Company had a note receivable arrangement with PMA, which was excluded from the judicial recovery process and provides the Company with guarantees. According to the note receivable arrangement, repayment was structured over 24 monthly installments beginning in March 2023 at an interest rate equivalent to Brazil's CDI rate of approximately 11.65%.

At December 31, 2024, PMA is in default of the agreement and the gross amount of accounts and note receivable from PMA was \$25.2 million (December 31, 2023 - \$25.2 million). Accordingly, the note receivable is considered credit impaired, and the Company increased its credit loss provision by \$8.0 million in the year ended December 31, 2024 (provision of \$4.1 million for the year ended December 31, 2023). After adjusting for credit loss provision and present value discount of \$13.1 million (December 31, 2023 - \$7.7 million), the carrying amount of PMA note receivable at December 31, 2024 was \$7.6 million (December 31, 2023 - \$17.4 million.), of which

Liquidity risk

Liquidity risk is the risk associated with the difficulties that the Company may have meeting the obligations associated with financial liabilities when they come due with cash payments or with another financial asset. The Company's approach to liquidity management is to ensure as much as possible that sufficient funds exist to meet their maturity obligations on the expiration dates, under normal and stressful conditions, without causing unacceptable losses or undermining the normal operation of the Company.

The table below shows the Company's maturity of non-derivative financial liabilities on December 31, 2024:

Non-derivative financial liabilities	Carrying value	Contractual cash flows	Up to 12 months	1 - 2 years	3 - 5 years
Loans and borrowings (including interest)	\$ 602,189	\$ 791,475	\$ 74,251	\$ 105,989	\$ 63,000
Accounts payable and accrued liabilities	95,120	95,120	95,120	—	—
Other non-current liabilities	5,825	5,825	—	4,771	—
Leases	17,885	19,431	11,995	6,398	—
Total	\$ 721,019	\$ 911,851	\$ 181,366	\$ 117,158	\$ 63,000

The Company also has a derivative financial liability for foreign exchange collar contracts whose notional amounts and maturity are below under foreign exchange currency risk.

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity prices. The Company's policy of market risk management is to manage and control exposures to market risks, within acceptable parameters, while optimizing returns.

The Company may use derivatives, including options, forwards and swap contracts, to manage market risks.

The Company's outstanding derivative instruments as of December 31, 2024 are as follows:

Contract Description	Notional Amount	Denomination	Weighted average floor	Weighted average cap / forward price
Foreign exchange collar (i)	\$390.0 million	USD/BRL	5.43	6.49
Gold collar (iii)	30,000 ounces	\$ / oz	\$2,200	\$3,425

(i) Foreign exchange currency risk

The Company's subsidiaries in Brazil are exposed to exchange risks primarily related to the US dollar. In order to minimize currency market risk, the Company monitors its cash flow projections considering future sales expectations indexed to US dollar variation in relation to the cash requirements of its financings.

The Company's exposure to foreign exchange currency risk at December 31, 2024 relates to \$60.0 million (December 31, 2023 - \$513.6 million) of borrowings of MCSA denominated in US dollars and Euros. In addition, the Company is also exposed to foreign exchange currency risk on \$513.6 million of intercompany loan balances (December 31, 2023 - \$342.2 million) which have contractual repayment terms. Sensitivity analysis: A 10% increase in the Brazilian Real against the US dollar at December 31, 2024 by 10% and 20%, would have decreased (increased) pre-tax net income by \$114.6 million, respectively. This analysis is based on the foreign currency exchange variation rate that the Company considered to be at the end of the year and excluding the impact of the derivatives below. The analysis assumes that all other variables, especially interest rates, remain constant.

The Company may use certain foreign exchange derivatives, including collars and forward contracts, to manage its foreign exchange risk. At December 31, 2024, the aggregate fair value of the Company's foreign exchange derivatives was a net liability of \$17.9 million (December 31, 2023 - \$30.8 million) which is reflected in current portion of derivatives liabilities. The fair values of foreign exchange contracts were determined based on forward foreign exchange rates, and information provided by the counter party.

The change in fair value of foreign exchange derivatives was an unrealized loss of \$30.8 million for the year ended December 31, 2024 (unrealized gain of \$11.4 million for the year ended December 31, 2023) and has been recognized in foreign exchange (loss) gain. In addition, during the year ended December 31, 2024, the Company recognized a realized loss of \$8.2 million (realized gain of \$11.4 million for the year ended December 31, 2023) related to foreign exchange currency forward collar contracts.

(ii) Interest rate risk

The Company is principally exposed to the variation in interest rates on loans and borrowings with variable rates of interest. Management manages interest rate risk exposure by entering into loans and borrowings with fixed rates of interest or by entering into derivative instruments that fix interest rates paid.

The Company is principally exposed to interest rate risk through its Senior Credit Facility and Brazilian Real denominated bank loans. At December 31, 2024, a 1% change in the variable rates would not materially impact its pre-tax annual net income.

(iii) Price risk

The Company may use derivatives, including forward contracts, collars and swap contracts, to manage commodity price risks.

At December 31, 2024, the Company has entered into zero-cost gold collar contracts on 2,500 ounces of gold per month from January 2025, representing approximately 50% of its estimated production volumes for the period. As of December 31, 2024, the fair value of gold collar contracts was a net liability of \$0.1 million (December 31, 2023 - nil). The fair value of gold collar contracts was determined based on option pricing models and information provided by counter party. At December 31, 2024, the Company does not have any outstanding copper collar contracts (December 31, 2023 - liability of \$0.6 million).

During the year ended December 31, 2024, the Company recognized an unrealized gain of \$0.2 million (unrealized loss of \$0.1 million for the year ended December 31, 2023) and a realized loss of \$2.6 million (realized loss of \$1.8 million for the year ended December 31, 2023) in other income or loss.

At December 31, 2024, the Company had provisionally priced sales that are exposed to commodity price changes (note 10). Sensitivity analysis: At December 31, 2024, a 10% change in the price of copper would have changed pre-tax net income by \$1.0 million.

Capital Management

**12 Months Ended
Dec. 31, 2024**

[Corporate information and
statement of IFRS
compliance \[abstract\]
Capital Management](#)

Capital Management

The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern in order to pursue the development and production of its mine properties and to maintain a flexible capital structure for its projects for the benefit of its stakeholders.

The Company's capital consists of items included in shareholders' equity, debt facilities net of cash and cash equivalents.

Management reviews the capital structure on a regular basis to ensure that the above-noted objectives are met. The Company manages the capital structure and makes adjustments to it considering changes in the economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new loans and borrowings, common shares, or acquire or dispose of assets.

Certain loan agreements contain operating and financial covenants that could restrict the ability of the Company and its subsidiaries. MCSA, Ero Gold, and NX Gold, to, among other things, incur additional indebtedness needed to fund its respective operations, pay dividends or make other distributions, make investments, create liens, sell or transfer assets or enter into transactions with affiliates. There are no other restrictions or externally imposed capital requirements of the Company.

**Other Provisions,
Contingent Liabilities And
Contingent Assets [Abstract]**

**Commitments and
Contingencies**

**Commitment and Contingencies
(b) Contingencies**

Due to the size, complexity and nature of the Company's operations, it is subject to various investigations, claims, legal and tax proceedings covering matters that arise in the ordinary course of business. Based on the opinion of the Company's legal advisers, management considers provisions for its outstanding and pending legal claims to be adequate.

Each of these matters is subject to various uncertainties and it is possible that some of these matters may resolve unfavourably to the Company. In the opinion of management, based upon the information currently available, none of these matters are expected to have a material adverse effect on the results of operations or financial conditions of the Company. In the event that management's estimate of the future resolution of these matters changes, the Company will recognize the effect of these changes in its consolidated financial statements in the period in which such changes occur. As at December 31, 2024, the Company has recognized a provision related to certain matters of \$1.6 million (December 31, 2023 - \$1.6 million).

There are five administrative claims (2023 – five claims) filed by the Nacional Mining Agency regarding alleged differences in the calculation of certain sales taxes on mining revenue by MCSA. As at December 31, 2024, the estimated impact of the claims is \$6.6 million (December 31, 2023 - \$4.8 million). The Company, based on the opinion of its legal advisors, does not believe such claims will result in a probable cash outflow and as such no provision is recognized.

[Corporate information and statement of IFRS compliance \[abstract\]](#)

[Basis of Presentation and Principles of Consolidation](#)

Basis of Presentation and Principles of Consolidation

These consolidated financial statements have been prepared on a historical cost basis except for derivative financial instruments measured at fair value through profit or loss.

These consolidated financial statements include the accounts of the Company and its subsidiaries. Subsidiaries are entities controlled by the Company. Control over a subsidiary is defined to exist when the Company is exposed to variable returns from involvement with the subsidiary and has the ability to affect the returns through power over the investee. All intercompany balances and transactions are eliminated in consolidation.

Since the Company does not own 100% of its interests in MCSA and NX Gold, the interest attributable to non-controlling shareholders is reflected in non-controlling interests. Adjustments to non-controlling interests that do not involve the recognition of new assets or liabilities are accounted for as equity transactions and adjustments are based on a proportionate amount of the net assets of the subsidiaries.

[Foreign Currency Translation](#)

Foreign Currency Translation

The functional currency and presentation currency of the Company is the US dollar. The monetary assets and liabilities of the Company denominated in foreign currencies are translated at the rate of exchange at the statement of financial position date while non-monetary assets and liabilities are translated at historical rates. Revenues and expenses are translated at the exchange rates approximating the rate in effect on the date of the transactions. Exchange gains and losses arising on translation are included in profit or loss.

The functional currency of all of the Company's Brazilian subsidiaries is the Brazilian Real ("BRL"). The assets and liabilities of the Company's Brazilian subsidiaries are translated into the US dollar presentation currency using the exchange rate at the statement of financial position date. Revenues and expenses are translated at the exchange rates approximating those in effect on the date of the transactions. Exchange gains and losses arising on translation are included in a separate component of shareholders' equity.

[Use of Estimates and Judgments](#)

Use of Estimates and Judgments

In preparing these financial statements, management has made judgments, estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses.

The estimates and assumptions are reviewed on an ongoing basis. Revisions to estimates are recognized prospectively.

Critical Judgments

Functional currency

The functional currency of the Company and each of its subsidiaries is the currency of the primary economic environment in which they operate. The Company has determined that the functional currency for the Company is the US dollar while the functional currency for its Brazilian subsidiaries is the BRL. Assessment of functional currency involves certain judgments to determine the primary economic environment and the Company reconsiders the functional currency of its entities if there is a change in events and conditions which determine the primary economic environment.

Legal claims and contingent liabilities

The recognition of legal provisions and contingent liabilities involves the assessment of claims made against the Company and its subsidiaries. The recognition of a legal provision, or disclosure of a contingent liability, involves certain judgments to determine the likelihood of whether a cash outflow will occur. In making this judgment, management has assessed various criteria and also relies on the advice of legal advisers to assist in making this assessment.

Commencement of Commercial Production

Determining when a mine under construction is substantially complete and ready for its intended use requires significant judgment. The Company used to make that determination for the Tucumã Operation included, amongst other things:

- the ability of the mine to produce salable product (i.e. the ability to produce metal within specifications),
- throughput of the processing plant reach a predefined percentage of design capacity over a reasonable period,
- processing plant recoveries reaching a pre-defined percentage of expected recoveries.

After evaluating the above factors, the Company concluded that the Tucumã Operation had not achieved commercial production by December 31, 2024, and therefore, is not yet ready for its intended use.

Key Sources of Estimation Uncertainty

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions about the reported amounts of assets and liabilities and the disclosure of assets and liabilities at the date of the consolidated financial statements and the reported amounts of expenses during the reporting periods. Actual results could differ from those estimates and such differences could be significant. Significant estimates made by management affecting the consolidated financial statements include:

Derivative instruments

The fair value of derivative instruments is determined using either present value techniques or option pricing models that use market inputs that are a combination of quoted prices and market-corroborated inputs, including assumptions for forward interest rates, volatilities and discount rates. The fair value of the Company's derivative contracts includes an adjustment for credit risk of the Company or the counter party as applicable. Changes in the assumptions for inputs into the models affect the fair value of the derivative instruments recognized in the statement of financial position as well as the unrealized gains or losses recognized in net income.

Carrying amounts of mineral properties and associated mine closure and reclamation costs

Changes in mineral reserves and resources information could impact depreciation and depletion rates, asset carrying amounts and provisions for mine closure and reclamation costs. The Company determines its mineral reserves and resources based on information provided by competent individuals. Mineral reserves and resources information is used in the calculation of depreciation, depletion and amortization, when applicable, of the recoverable amount of CGUs, and for forecasting the timing of reclamation and closure cost expenditures.

There are numerous uncertainties inherent in estimating mineral reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the estimation methodology, forecasted prices of commodities, discount rates, production costs or recovery rates may change the economic status of mineral reserves and may, ultimately, result in the impairment of mineral reserves.

Mine closure and reclamation costs

Significant estimates and assumptions are made in determining the provision for mine closure and reclamation costs as they are subject to a number of factors that will affect the ultimate liability payable. These factors include estimation of the extent and cost of rehabilitation, future cash flows, discount rates, inflation rate, and regulatory requirements.

Changes in the above factors can result in a change to the provision recognized by the Company. Changes to mine closure and reclamation costs are recorded with a corresponding change to the carrying amounts of related mineral properties, plant and equipment. Changes in carrying amounts of related mineral properties, plant and equipment can result in a change to future depreciation and depletion.

Income taxes

The determination of the Company's tax expense for the period and deferred tax assets and liabilities involves significant judgment by management. In determining these amounts, management interprets tax legislation in a variety of jurisdictions and makes estimates of the expected timing of the reversal of deferred tax assets and liabilities. Management also makes estimates of the extent to which potential future tax benefits may be used. The Company is subject to assessments by tax authorities, which may interpret legislation differently. These differences may affect the final amount or the timing of the payment of taxes. The Company provides for such differences where known based on management's best estimate of the probable outcome of the tax audits.

The Company operates in Brazil where tax authorities may audit income tax treatments and the resolution of such audits may take several years. Tax law in Brazil is complex and often subject to changes and to varied interpretations; accordingly, the ultimate outcome of such audits on income tax treatments may differ from the amounts recognized. The Company's assessment of whether it is probable that the tax treatments will be accepted by tax authorities in Brazil is a significant management judgment.

Deferred Revenue

Judgment and estimates were required in determining the accounting for the precious metal purchase agreement ("PMPA") with Royal Gold AG, a subsidiary of Royal Gold Inc. (collectively "Royal Gold"), which is accounted for as deferred revenue in accordance with *Revenue from Contracts with Customers* ("IFRS 15"). As the Company's obligation under the precious metal purchase agreement will be satisfied by the deliveries of a non-financial item (i.e. deliveries of gold ounces), rather than cash or other financial assets, it was determined that the PMPA should be recognized as a liability and continued to be held for the purpose of the delivery of a non-financial item in accordance with the Company's expected business model.

requirements and thus not within the scope of IFRS 9 *Financial Instruments* ("own use exemption"). The determination of whether the exemption applies requires management's judgements.

Each period management estimates the cumulative amount of the deferred revenue obligation that has been satisfied and recognized as revenue. Key inputs into the estimate of the amount of deferred revenue that should be recognized include the following:

- a. Future gold prices were used at inception of the contract to estimate the expected total consideration to be received, including variable consideration and is used as the stand alone selling price to allocate the consideration to each concentrate delivered to Royal Gold, and
- b. Expected life of mine gold production and the timing thereof, which is estimated based on the approved life of mine plan and estimated proven and probable reserves.

Expected credit loss provision

Significant estimates and assumptions are made in determining the expected credit loss provision for financial assets measured at amortized costs as there are numerous factors that will affect the ultimate asset receivable. These factors include, at default, the expected recovery, the discount rate, and the timing of expected cash flow.

[New Accounting Policies, Standards and Interpretations](#)

[\(e\) New Accounting Policies, Standards and Interpretations](#)

On January 1, 2024, the Company adopted the following amendments to accounting standards:

- In January 2020, the IASB issued *Classification of Liabilities as Current or Non-current (Amendments to IAS 1)* and *1, Presentation of Financial Statements* ("IAS 1"), to clarify the requirements for presenting liabilities in the statement of financial position. The amendments specify that the Company must have the right to defer settlement of a liability for at least 12 months after the reporting period for the liability to be classified as non-current. In addition, the amendments clarify that: (a) the Company's right to defer settlement must exist at the end of the reporting period; (b) classification is unaffected by management's intention to settle the liability; (c) if the Company's right to defer settlement is subject to the Company complying with specified conditions, the right exists at the end of the reporting period only if the Company complies with the conditions at the end of the reporting period, even if the lender does not test compliance until a later date; and (d) the transfer of the Company's own equity instruments to the counterparty that results in the extinguishment of the liability, except when the settlement of the liability with the Company transferring its own equity instruments is at the option of the counterparty and such option has been classified as an equity instrument, separate from the host liability.
- In October 2022, the IASB issued amendment *Non-current Liabilities with Covenants* to IAS 1 to clarify that arrangements which the Company must comply with only after the reporting date would not affect classification of liabilities as current or non-current at the reporting date. The amendment also introduces additional disclosure requirements related to non-current liabilities which include: (i) the nature of the covenants and the date by which the Company must comply with the covenants; (ii) the terms and conditions of the related liabilities; and (iii) facts and circumstances, if any, that indicate that the Company may have difficulty complying with the covenants.

The adoption of these amendments did not have a material impact on the Company's consolidated financial statements.

Future Changes in Accounting Policies Not Yet Effective as of December 31, 2024 In April 2024, the IASB issued *IFRS 18, Presentation and Disclosure in Financial Statements* ("IFRS 18") to replace IAS 1. IFRS 18 introduces two newly required subtotals on the statement of financial position, which includes operating profit and profit or loss before financing and income tax, and three new classifications, which are operating, investing, and financing. In addition, IFRS 18 requires non-IFRS management performance measures that are subtotals of income and expenses to be disclosed on financial statement. IFRS 18 also provides additional principles of aggregation and disaggregation which apply to the primary financial statements and the notes. IFRS 18 does not change the recognition and measurement of items in the financial statements, nor will it affect which items are classified in the statement of comprehensive income and how these items are classified. The standard is effective for reporting periods beginning on or after January 1, 2027. Retrospective application is required and early application is permitted. The Company is currently assessing the impact of the new standard on our financial statements.

[Revenue](#)

Revenue

Revenue relating to the sale of metals is recognized at the point the customer obtains control of the product and when the Company has satisfied its performance obligations. Control is transferred when title has passed to the purchaser, the product is physically delivered to the customer, the customer controls the risks and rewards of ownership and the Company has a present right to payment for the product. Revenue is generally when the concentrate or doré is delivered to a location designated by the customer, or when gold credits are delivered to the customer. Revenue from the sale of metals is recognized on a net basis, after metal deductions, smelting, refining and other costs.

The sales amount is typically based on quoted market and contractual prices which are fixed at the time the shipment is delivered to the customers' premises. In certain circumstances the sales price of metals in concentrate may be determined in a period subsequent to the sale (provisionally priced sales) based on the terms of specific copper concentrate contracts. Provisionally priced sales are recognized based on an estimate of metal contained using forward market prices corresponding with the expected date that final sales prices will be determined.

between provisional pricing and final settlement can be up to one month. The settlement receivable is recorded at fair value at the reporting date and is subsequently measured at fair value at each reporting period by reference to forward market prices until the date of final pricing, with the changes in fair value recorded as an adjustment to revenue.

Deferred revenue primarily consists of payments received by the Company in consideration for future commitments to deliver gold. Deferred revenue is measured at the fair value of the consideration received, less the fair value of the gold to be delivered, which is determined by reference to the fair value of gold at the reporting date. As gold deliveries are made, the Company recognizes the deferred revenue as revenue, calculated on a per unit basis using the total number of gold ounces expected to be delivered over the life of the mine. The current portion of deferred revenue is based on deliveries anticipated over the next twelve months.

Interest expense on deferred revenue is recognized in finance costs as there is a significant financing component related to the deferred revenue arrangement. Interest expense is calculated based on the purchase agreement, resulting from a difference in the timing of the upfront consideration received and delivery of the gold. Interest expense is calculated based on the rate implicit in the precious metal purchase agreement at the date of inception.

The additional consideration to be received under the precious metal purchase agreement is considered variable, subject to changes in the total estimated gold ounces to be delivered and gold prices. Changes to variable consideration are accounted for as adjustments to revenue on a cumulative catch-up and are recorded in revenue in profit or loss.

[Finance Income and Finance Expense](#)

Finance Income and Finance Expense

Finance income includes interest on cash and cash equivalents, restricted cash and financial investments, and gains related to the fair value of financial assets measured at fair value through profit or loss. Interest income is recognized as it accrues in profit or loss using the effective interest method.

Finance expense comprises of interest expense on loans and borrowings, accretion expense on provisions, leases and intangible assets, revenue, commitment fees and losses related to changes in the fair value of financial assets measured at fair value through profit or loss and expected credit losses. Borrowing costs that are not directly attributable to the acquisition, construction or production of a qualifying asset are recognized in profit or loss using the effective interest method.

[Taxation](#)

Taxation

Current income tax is the expected tax payable or receivable on the taxable income or loss for the year using tax rates enacted or expected to be enacted at the reporting date.

Deferred income tax is recognized in respect of temporary differences between the carrying amounts of assets and liabilities in the balance sheet for reporting purposes and the amounts used for taxation purposes. Deferred income tax is measured at the tax rates that are expected to be applied to temporary differences when they reverse, based on the tax laws that have been enacted or substantively enacted at the reporting date. Deferred income tax assets and liabilities are offset if there is a legally enforceable right to offset current tax liabilities with current tax assets, or they relate to income taxes levied by the same tax authority on the same taxable entity. Deferred income tax is not recognized for temporary differences if the recognition of assets or liabilities in a transaction that is not a business combination, that affects neither accounting nor taxable income, and does not give rise to equal taxable and deductible temporary differences at the time of the transaction, differences relate to the same taxable entity in subsidiaries to the extent that it is probable that they will not reverse in the foreseeable future, and taxable differences are not recognized in the recognition of goodwill.

A deferred income tax asset is recognized for unused tax losses, tax credits and deductible temporary differences, to the extent that it is probable that future taxable profits will be available against which they can be utilized. Deferred income tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realized.

Uncertainties over income tax treatments are evaluated on the basis of whether it is probable that they will be accepted or rejected by the relevant taxing authorities including Brazil. These uncertainties impact the amount of income taxes recognized. If it is not probable that an uncertain income tax treatment is not probable of being accepted, the effect of the uncertain income tax treatment is recognized in profit or loss based on the determination of income taxes based the most likely amount or, if there are a wide range of possible outcomes, the expected outcome.

[Tax Incentives](#)

Tax Incentive The Company receives certain tax incentives in Brazil. These tax incentives are recognized in profit or loss when the incentives are received or receivable and recorded against the expenditure that they are intended to compensate.

[Inventories](#)

Inventories

Inventories are measured at the lower of cost and net realizable value. The cost of consumable inventory is determined on a first-in, first-out basis. Cost of stockpile inventory, products in progress and finished goods is determined based on a weighted average production cost basis and includes the cost of mining and processing ore including direct labour and materials; depreciation and amortization of mining equipment and an appropriate share of production overheads based on normal operating capacity.

Net realizable value of stockpile inventory, products in progress and finished goods is the estimated selling price in the ordinary course of business, less estimated completion costs and selling expenses. Write-downs of inventories to net realizable value are recognized in profit or loss in the period of the write-down. A write-down of inventories is reversed in a subsequent period if there is a subsequent increase in the net realizable value of the related inventories.

[Mineral, Property, Plant and Equipment](#)

Mineral Properties, Plant and Equipment

Mineral properties, plant and equipment is measured at acquisition or construction cost less accumulated depreciation and impairment losses.

(i) Acquisition and disposal

The cost of mineral properties, plant and equipment include expenditures directly attributable to an asset's acquisition. The cost of an asset constructed by Company includes the cost of materials and direct labor, any other costs to bring the asset in the place and condition to be operated in the manner intended by management including advances on long lead items, mine closure and reclamation and borrowing costs on qualifying assets.

When parts of mineral properties, plant and equipment have different useful lives, they are accounted for as separate items (classes) of mineral properties, plant and equipment.

Gains and losses on disposal of mineral properties, plant and equipment are determined by comparing the proceeds from disposal with the carrying amount of equipment and are recognized net within other income.

(ii) Subsequent costs

The cost of replacing plant and equipment is recognized in the carrying amount of the item if it is probable that the future economic benefits embodied within the item will flow to the Company and its cost can be measured reliably. The carrying amount of the replaced item is derecognized. The maintenance service costs of plant and equipment are included in profit or loss.

(iii) Development and construction-in-progress

When economically viable mineral reserves have been determined and the decision to proceed with development has been made, exploration and evaluation assets are first assessed for impairment, then reclassified to construction-in-progress or mineral properties. Expenditures related to development and construction are capitalized as construction-in-progress. Borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset that takes a substantial period of time to get ready for its intended use are included as part of construction-in-progress until the asset is substantially ready for its intended use. Construction-in-progress is not depreciated.

Once an asset is available for use, construction-in-progress costs are reclassified to mineral properties or plant and equipment.

Pre-production costs of removing overburden to access ore in the open pit mines and developing access headings in the underground mines are capitalized as pre-production stripping or development costs respectively and are included within mineral properties, plant and equipment.

(iv) Mineral properties

Mineral properties consist of the cost of acquiring and developing mineral properties. Once in production, mineral properties are depreciated on a units-of-production basis over the component of the ore body to which they relate.

(v) Stripping costs and development in the production phase

Where open pit production stripping or underground development activities do not result in inventory produced, but do result in improved access to the ore body, the costs are classified as mineral properties when these activities meet all of the following criteria: (1) it is probable that the future economic benefit associated with the activity will flow to the Company; (2) the Company can estimate the mineral reserve of the ore body for which access has been improved; and (3) the costs relating to the activity associated with that mineral reserve can be measured reliably.

For underground mines, costs incurred to access a mineral reserve of the ore body are capitalized to mineral properties or construction-in-progress and are depreciated on a units-of-production basis over the expected useful life of the identified mineral reserve to which access has been improved as a result of the development activity. For open pit mines, stripping costs above average line (waste/ore) are capitalized to mineral properties or construction-in-progress and are depreciated over the related mineral reserve over the stripping activity.

(vi) Depreciation

Items of mineral properties, plant and equipment are depreciated based on the estimated economic useful life of each component.

Depreciation methods, useful lives and residual values are reviewed at each financial year end and adjusted if appropri

[Exploration and Evaluation Assets](#)

Exploration and Evaluation Assets

Exploration and evaluation costs relate to the initial search for a mineral deposit, the cost of acquisition of a mineral pr exploration rights and the subsequent evaluation to determine the economic potential of the mineral deposit. The explor stage commences when the Company obtains the legal right or license to begin exploration. Once the legal rights or l exploration and evaluation expenses are capitalized as exploration and evaluation assets. Costs incurred prior to the Com legal rights are expensed.

When the exploration and evaluation of a mineral properties indicates that development of the mineral properties is technical feasible, the future economic benefits are probable, and the Company has the intention and sufficient resources to comple and use or sell the asset, the related costs are transferred from exploration and evaluation assets to mineral properties, pla Management reviews the carrying value of capitalized exploration costs for indicators that the carrying value is impaired at when facts and circumstances suggest that the carrying amount may exceed the recoverable amount. The review is based intentions for further exploration and development of the undeveloped property, results of drilling, commodity prices and geological factors. Subsequent recovery of the resulting carrying value depends on successful development or sale of the un If a property does not prove viable, all non-recoverable costs associated with the project, net of any previous impairment pro off.

[Financial Instruments](#)

Financial Instruments

Non-derivative financial assets

The Company classifies its financial assets in the following categories: at fair value through profit or loss (“FVTPL”), at other comprehensive income (“FVTOCI”) or at amortized cost. The classification depends on the purpose for which the fin acquired. Management determines the classification of its financial assets at initial recognition. Measurement and classifi assets is dependent on the Company’s business model for managing the financial assets and the contractual cash flow cl financial asset. Financial assets are derecognized when they mature or are sold, and substantially all the risks and rewards been transferred.

Classification and measurement

The Company has assessed the classification and measurement of its financial assets and financial liabilities under IFR table:

	Measurement Category
Financial Assets	
Cash and cash equivalents	Amortized Cost
Short-term investments	Amortized Cost
Trade receivables related to provisional priced sales	Fair value through profit or
Derivatives	Fair value through profit or
Notes and other receivables	Amortized Cost
Deposits	Amortized Cost
Financial Liabilities	
Trade payables	Amortized Cost
Loans and borrowings	Amortized Cost
Derivatives	Fair value through profit or

Financial assets at FVTPL

Financial assets carried at FVTPL are initially recorded at fair value and transaction costs are expensed in the income state unrealized gains and losses arising from changes in the fair value of the financial asset held at FVTPL are included in profit in which they arise.

Financial assets at amortized cost

Financial assets at amortized cost are initially recognized at fair value and subsequently carried at amortized cost less any impairment. They are classified as current assets or non-current assets based on their maturity date. Gains and losses on derecognition of financial assets at amortized cost are recognized in profit or loss.

Financial liabilities

Financial liabilities, other than derivative instruments, are recognized initially at fair value, net of transaction costs. They are subsequently measured at amortized cost. Any difference between the amounts originally received, net of transaction costs, and the amortized cost is recognized in profit and loss over the period to maturity using the effective interest method.

Derivative instruments

Derivative instruments, including embedded derivatives in executory contracts or financial liability contracts, are classified as financial assets or liabilities accordingly, are recorded in the statement of financial position at fair value. Unrealized gains and losses on derivatives are recognized in the revenue or expense item to which the derivative relates, depending on the nature of the derivative. Fair values for derivatives are determined using inputs based on market conditions existing at the balance sheet date or settlement date of the derivative. Embedded derivatives in non-derivative contracts are recognized separately unless they are closely related to the host contract.

Fair values

A number of the Company's accounting policies and disclosures require the measurement of fair values, for both financial assets and liabilities.

When measuring the fair value of an asset or liability, the Company uses observable market data, as much as possible. Fair values are categorized into different levels in a hierarchy based on the inputs used in the valuation techniques, as follows:

- **Level 1:** quoted prices (without adjustments) in active markets for identical assets or liabilities.
- **Level 2:** inputs other than Level 1 quoted prices, that are observable for the asset or liability, either directly (i.e. as quoted prices) or indirectly (i.e. derived from prices).
- **Level 3:** inputs, for assets or liabilities, that are not based on observable market information (non-observable inputs).

The Company recognizes transfers between levels of the hierarchy of fair value at the end of the reporting period during which the transfers occurred.

When applicable, additional information on the assumptions used in the fair value calculations are disclosed in the supplementary information to the financial statements for the corresponding asset or liability.

[Impairment](#)

Impairment

i) Financial assets

The Company recognizes a loss allowance for expected credit losses on financial assets that are measured at amortized cost. At each reporting date, the loss allowance for the financial asset is measured at an amount equal to the lifetime expected credit losses if the financial asset has increased significantly since initial recognition. If at the reporting date, the financial asset has not increased significantly since initial recognition, the loss allowance is measured for the financial asset at an amount equal to twelve months' expected credit losses. For trade receivables the Company applies the simplified approach to providing for expected credit losses, which allows to recognize a loss allowance at an amount equal to the expected loss provision. Impairment losses on financial assets carried at amortized cost are reversed in subsequent periods if the loss allowance decreases and the decrease can be objectively related to an event occurring after the impairment was recognized. The credit loss provision for trade receivables is based on historical counterparty default rates and adjusted for relevant forward-looking information when required.

ii) Non-Financial assets

At each reporting date, the carrying amounts of the Company's mineral properties, plant and equipment and exploration and evaluation assets are reviewed to determine whether there is any indication that those assets are impaired. If such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. The recoverable amount is the higher of fair value less costs of disposal and value in use, which is the present value of future cash flows expected to be derived from the asset or its related cash-generating unit.

unit. For purposes of impairment testing, assets are grouped at the lowest levels that generate cash inflows from continuing independent of the cash inflows of other assets or groups of assets (the "cash-generating unit").

If the recoverable amount of an asset or cash-generating unit is estimated to be less than its carrying amount, the carrying amount of the associated assets are reduced to their recoverable amount and the impairment loss is recognized in the profit or loss for the period. Impairment losses recognized in prior periods are assessed at each reporting date for any indications that the loss has no longer exists. An impairment charge is reversed through profit or loss only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of any applicable depreciation, if no impairment loss had been recognized.

Provisions

Provisions

A provision is recognized when the Company has a present legal or constructive obligation as a result of a past event that is a liability, reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are calculated as the expected future cash flows discounted, if material, at a pre-tax rate that reflects the current market assessments of the time value of the risks specific to the liability. The discount is unwound over the period over which the cash flows are expected to be incurred and the expense included in finance expense.

The Company records the present value of estimated costs of legal and constructive obligations related to mine closure and rehabilitation over the period in which the obligation occurs. Mine closure and rehabilitation activities include facility decommissioning and dismantling of waste materials; site and land rehabilitation, including compliance with and monitoring of environmental regulatory requirements; costs required to perform this work and/or operate equipment designed to reduce or eliminate environmental effects. The provision is recognized at each period for new disturbances, and changes in regulatory requirements, the estimated amount of future cash flows required to settle the obligation, the timing of such cash flows and the pre-tax discount rate specific to the liability. The unwinding of the discount is recognized in finance expense.

When the provision is initially recognized, the corresponding cost is included in the carrying amount of the related asset and is amortized to profit or loss on a unit-of-production basis.

Share-Based Compensation

Share-Based Compensation

The Company issues share based payment awards to employees and consultants, including directors and officers ("Eligible Personnel"). The grant date fair value of equity settled share based payment awards is recognized as share-based compensation, with a corresponding increase in equity, over the vesting period. The amount recognized as an expense is based on management's best estimate of the fair value of the instruments expected to vest. The cumulative amount expensed is adjusted at the end of each reporting period to reflect changes in the number of instruments expected to vest.

Performance share units and deferred share units are liability awards settled in cash and measured at the quoted market value of the Company's shares at the grant date with the corresponding expense recognized over vesting period. The corresponding liability is adjusted for changes in share price at each subsequent reporting date until the awards are settled. The performance share units liability is also adjusted for changes in the number of awards for which the related service and non-market vesting conditions are expected to be performed or satisfied.

Leases

Leases

The Company recognizes a right-of-use asset and a lease liability at the lease commencement date. The right-of-use asset is measured at cost, and subsequently at cost less any accumulated depreciation and impairment losses, and adjusted for certain remeasurements of the lease liability. The cost of the right-of-use asset includes the amount of the initial measurement of the lease liability, any lease payments made at or before the commencement date, less any lease incentives received, any initial direct costs; and if applicable, an estimate of the costs incurred by the Company in dismantling and removing the underlying asset, restoring the site on which it is located or restoring the asset to the condition required by the terms and conditions of the lease.

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted by the interest rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate. The borrowing rate reflects the rate of interest that the lessee would have to pay to borrow the funds necessary to obtain an asset of a similar economic environment with similar terms and conditions. Generally, the Company uses its incremental borrowing rate.

The lease liability is subsequently increased by the interest cost on the lease liability and decreased by lease payments made during the period. When there is a change in future lease payments arising from a change in an index or rate, a change in the estimate of the amount of the lease payments to be payable under a residual value guarantee, or as appropriate, changes in the assessment of whether a purchase option is reasonably certain to be exercised or a termination option is reasonably certain not to be exercised.

The Company does not recognize right-of-use assets and lease liabilities for leases of low-value assets and leases with short-term durations of less than 12 months. Lease payments associated with these leases are instead recognized as an expense over the lease term on either a straight-line basis, or another systematic basis if more representative of the pattern of benefit.

Income per Share

Income or Loss per Share Basic income or loss per share is calculated by dividing the net income attributable to common shareholders of the Company by the weighted average number of common shares outstanding during the period. Diluted income per share is calculated by adjusting the weighted average number of common shares outstanding for the effect of conversion of

dilutive share equivalents, such as stock options and share units. The dilutive effect of share options assumes that the proceeds upon exercise of the options are used to repurchase common shares at the average market price during the period. The effect of the shares issued less the shares assumed to be repurchased is added to the basic weighted average shares outstanding. Equity-settled share units (as defined herein, see note 15(f)), the common shares to be included in the diluted per share amounts are based on the number of shares that would be issuable if the reporting date were the end of the vesting period.

Schedule of Disaggregation of
Revenue](#)

		Year ended December 31,	
		2024	2023
Copper			
Export sales		\$ 342,774	\$ 342,774
Sales within Brazil		—	—
Adjustments on provisional sales ⁽¹⁾		182	182
		342,956	342,956
Gold			
Sales		108,993	108,993
Amortization of deferred revenue ⁽²⁾		18,310	18,310
		\$ 127,303	\$ 127,303
		\$ 470,259	\$ 470,259

(1) Adjustments on provisional sales include both pricing and quantity adjustments. Provisionally priced sales to the Company's international customers are settled within zero to one month (December 31, 2023 - zero to four months) after shipment takes place and, therefore, are exposed to commodity price changes.

During the year ended December 31, 2024, the Company delivered 15,917 ounces of gold (year ended December 31, 2023 - 15,917 ounces of gold) under a precious metals purchase agreement with Royal Gold (note 12) for average cash consideration of \$473 per ounce (year ended December 31, 2023 - \$386 per ounce) and recognized \$18.3 million in amortization of deferred revenue (year ended December 31, 2023 - \$17.1 million). Amortization of deferred revenue during the year ended December 31, 2024 is net of \$3.0 million (December 31, 2023 - \$2.5 million) related to change in estimate attributed to advances received and change in life-of-mine production estimate.

[Income Taxes \[Abstract\]](#)

[Reconciliation of Income Tax Expense](#)

A reconciliation of the income tax expense to the amount calculated using the Company's combined Canadian federal and provincial of 27% (2023 – 27%) is as follows:

	Year ended December 31, 2024	
	2024	
Net (loss) income in the year before tax	\$ (75,441)	\$
Tax rate	27 %	
Income tax (recovery) expense at statutory rate	\$ (20,369)	\$
Tax effect of:		
Difference in tax rate of foreign jurisdictions	6,964	
Non-taxable items	(1,601)	
Change in temporary differences not previously recognized	(4,667)	
Change in tax law	2,999	
Withholding taxes and other	9,023	
Income tax (recovery) expense	\$ (7,651)	\$

[Components of Income Tax Expense](#)

	Year ended December 31, 2024	
	2024	
Current income tax:		
Relating to current income tax charge	\$ 17,662	\$
Deferred income tax:		
Relating to origination and reversal of temporary differences	(25,313)	
Income tax (recovery) expense recognized in net income	\$ (7,651)	\$
Income tax (recovery) expense recognized in other comprehensive income	(833)	
Total income tax (recovery) expense	\$ (8,484)	\$

[Schedule of Deferred Tax Assets and Liabilities](#)

The general movement in the deferred income tax assets (liabilities) is as follows:

	Year ended December 31, 2024	
	2024	
At the beginning of the year	\$ (9,548)	\$
Deferred income tax recovery (expense)	25,313	
Income tax (recovery) expense recognized in OCI	833	
Foreign exchange	61	
At the end of the year	\$ 16,659	\$

Recognized deferred tax and assets and liabilities consist of the following:

	December 31, 2024	
Deferred tax assets:		
Non-capital losses	\$ 18,078	\$
Foreign exchange	20,590	
Financing fees and other	5,216	
Mine closure and rehabilitation provision	3,338	
Lease liabilities	2,528	
	<u>49,750</u>	
Deferred tax liabilities:		
Mineral properties, plant and equipment	(22,735)	
Loans and borrowings	(8,560)	
Foreign exchange	—	
Loans and borrowings	(1,796)	
	<u>(33,091)</u>	
Net deferred income tax assets (liabilities)	<u>\$ 16,659</u>	<u>\$</u>
Presentation on Consolidated Statements of Financial Position		
Deferred tax assets	\$ 16,659	\$
Deferred tax liabilities	<u>—</u>	<u>\$</u>

[Schedule of Unrecognized
Deductible Temporary
Differences](#)

Deferred tax assets of \$31.4 million (December 31, 2023 - \$35.1 million) have not been recognized for the following deductible temporary differences as it is not probable that the benefits of these temporary differences will be realized:

	Year ended December 31, 2024		Year ended Dec
	Brazil	Canada	Brazil
Mineral properties, plant and equipment	\$ 31,236	\$ 873	\$ 39,959
Non-capital losses	—	40,831	—
Other	—	67,770	—
	<u>\$ 31,236</u>	<u>\$ 109,474</u>	<u>\$ 39,959</u>

Financial Instruments

[Abstract]

**Schedule of Maximum Credit
Risk Exposure**

The carrying amount of the financial assets below represents the maximum credit risk exposure as at December 31, 2024
2023:

	December 31, 2024	
Cash and cash equivalents	\$ 50,402	\$
Accounts receivable	18,399	
Derivatives	—	
Note receivable	12,009	
Deposits and other assets	4,961	
	\$ 85,771	\$

**Maturity of Non-Derivative
Financial Liabilities**

The table below shows the Company's maturity of non-derivative financial liabilities on December 31, 2024:

	Carrying value	Contractual cash flows	Up to 12 months	1 - 2 years	3 - 5 years
Non-derivative financial liabilities					
Loans and borrowings (including interest)	\$ 602,189	\$ 791,475	\$ 74,251	\$ 105,989	\$ 6
Accounts payable and accrued liabilities	95,120	95,120	95,120	—	
Other non-current liabilities	5,825	5,825	—	4,771	
Leases	17,885	19,431	11,995	6,398	
Total	\$ 721,019	\$ 911,851	\$ 181,366	\$ 117,158	\$ 6

**Disclosure of maturity analysis
for derivative financial
liabilities**

The Company's outstanding derivative instruments as of December 31, 2024 are as follows:

Contract Description	Notional Amount	Denomination	Weighted average floor	Weighted average cap / forward price
Foreign exchange collar (i)	\$390.0 million	USD/BRL	5.43	6.49
Gold collar (iii)	30,000 ounces	\$ / oz	\$2,200	\$3,425
