**MASSMUTUAL PREMIER FUNDS**  
**Supplement dated June 1, 2010 to the**  
**Prospectus dated March 1, 2010**

This supplement provides new and additional information beyond that contained in the Prospectus and any previous supplements. It should be retained and read in conjunction with the Prospectus and any previous supplements.

*The following information replaces similar information for the **Money Market Fund** found on page 3 in the section titled **Principal Investment Strategies**:*

The Fund invests in high quality debt instruments, including commercial paper and other corporate obligations, securities issued or guaranteed by the U.S. Government or its agencies or instrumentalities, and certificates of deposit and bankers' acceptances. The Fund may enter into repurchase transactions (including dollar rolls and reverse repurchase agreements) and forward commitments.

In managing the Fund, the Fund's subadviser, *Babson Capital Management LLC* ("Babson Capital") intends to comply with Rule 2a-7 under the Investment Company Act of 1940, as amended (the "1940 Act"), which sets forth the requirements for money market funds regarding credit quality, diversification and maturity. These requirements include holding investments which are generally rated in the two highest rating categories as rated by a major credit agency and investments which generally have a maturity of 397 days or less and a dollar-weighted average portfolio maturity of 60 days or less.

*The following information replaces similar information for the **Money Market Fund** found on page 4 in the first paragraph in the section titled **Principal Risks**:*

It is important to note that this Fund seeks to maintain, but does not guarantee, a stable net asset value of \$1.00 per share. **An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Although the Fund seeks to maintain a stable net asset value of \$1.00 per share, it is possible to lose money by investing in the Fund.**

*The following information replaces similar information for the **Focused International Fund** found in the first bullet of the second paragraph on page 81 in the section titled **Principal Investment Strategies**:*

*Europe ex-UK and Developed Middle East–EAFE Index +/- 25% (i.e. if the EAFE Index weighting for this bloc is 40%, the Fund will invest no less than 15% and no more than 65% of its total assets in the countries within such bloc);*

*The following information supplements information found in the section titled **About the Classes of Shares**:*

All classes of each Fund may not be available in every state. Currently, only Class A shares of each Fund are available in New Hampshire, Nebraska, and Oklahoma.

*The following information replaces similar information for the **Money Market Fund** found on page 111 in the first paragraph in the section titled **Determining Net Asset Value**:*

The NAV of each Fund's shares is determined once daily as of the close of regular trading on the NYSE, on each day the NYSE is open for trading. The NYSE normally closes at 4:00 p.m. Eastern Time, but may close earlier on some days. The NYSE currently is not open for trading on New Year's Day, Martin Luther King, Jr. Day, President's Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day and on occasion is closed early or entirely due to weather or other conditions. The NAV of each Fund share is the total NAV of the applicable Fund divided by the number of its shares outstanding. The total NAV of each Fund is determined by computing the value of the total assets of the Fund and deducting total liabilities, including accrued liabilities. It is the intention of the Money Market Fund to maintain a stable NAV per share of \$1.00, although this cannot be assured.

**Statement of Additional Information dated March 1, 2010**

This supplement provides new and additional information beyond that contained in the Statement of Additional Information (“SAI”) and any previous supplements. It should be retained and read in conjunction with the SAI and any previous supplements.

*The following information replaces similar information found on page 4 in the first and second paragraphs under the **Money Market Fund** heading in the section titled **Additional Investment Policies**:*

For so long as the Money Market Fund values its portfolio instruments on the basis of amortized cost (see “Valuation of Portfolio Securities”), its investments are subject to portfolio maturity, portfolio quality and portfolio diversification requirements imposed by Rule 2a-7 under the 1940 Act. The Money Market Fund must maintain a dollar-weighted average portfolio maturity of 60 days or less, generally must purchase instruments having remaining maturities of thirteen months (generally 397 days) or less, and must invest only in United States dollar-denominated securities determined to be of high quality with minimal credit risks.

The Money Market Fund’s non-fundamental investment policy is that, at the time it acquires a security, it will invest at least 97% of its net assets in First Tier Securities and no more than 3% of its net assets in Second Tier Securities. A security qualifies as a First Tier Security if, among other things, (a) two nationally recognized statistical rating organizations (“NRSROs”) have both given it their highest ratings, even if other NRSROs have rated it lower, or (b) one NRSRO has given it the highest rating, if the security has been rated by only one NRSRO. In addition to Standard & Poor’s Ratings Group (“S&P”) and Moody’s Investors Service, Inc. (“Moody’s”), other NRSROs include Fitch Ratings (“Fitch”). A Second Tier Security is any security that is not a First Tier Security. In certain circumstances, unrated securities may qualify as First or Second Tier Securities if the Fund’s investment adviser or subadviser determines that such securities are of comparable quality to First or Second Tier Securities. A rating or determination of comparable quality is no guarantee that a portfolio instrument will not decline in creditworthiness and/or value.

*The following information replaces similar information found on page 26 in the first sentence of the first paragraph under the **Illiquid Securities** heading in the section titled **Additional Investment Policies**:*

Each Fund may invest not more than 15% (5% in the case of the Money Market Fund) of its net assets in “illiquid securities,” which are securities that are not readily marketable (including securities whose disposition is restricted by contract or under federal securities laws), including, generally, securities that cannot be sold or disposed of in the ordinary course of business within seven calendar days at approximately the values ascribed to them by a Fund.

*The following information replaces similar information found on page 37 in the section titled **Investment Restrictions of the Funds**:*

In addition to the investment restrictions adopted as fundamental policies set forth above, the Funds operate with certain non-fundamental policies that may be changed by vote of a majority of the Board members at any time.

In accordance with such policies, each Fund may not:

- (1) sell securities short, but reserves the right to sell securities short against the box.
- (2) invest more than 15% of its net assets in illiquid securities (5% in the case of the Money Market Fund). This restriction does not limit the purchase of securities eligible for resale to qualified institutional buyers pursuant to Rule 144A under the 1933 Act, provided that such securities are determined to be liquid by MassMutual or the subadviser pursuant to Board approved guidelines.
- (3) to the extent that shares of the Fund are purchased or otherwise acquired by other series of the Trust or other series of registered open-end investment companies in the Trust’s “group of investment

---

companies” (as such term is defined in Section 12(d)(1)(G) of the 1940 Act), acquire any securities of registered open-end investment companies or registered unit investment trusts in reliance on Section 12(d)(1)(F) or Section 12(d)(1)(G) of the 1940 Act.

With respect to limitation (2) above, if there is a lack of trading interest in particular Rule 144A securities, a Fund’ s holdings of those securities may be illiquid, resulting in the possibility of undesirable delays in selling these securities at prices representing fair value. If, through a change in values, net assets, or other circumstances, the Fund were in a position where more than 15% of its net assets was invested in illiquid securities (5% in the case of the Money Market Fund), it would consider appropriate steps to protect liquidity.

*The following information supplements information found on page 76 in the section titled **Redemption of Shares**:*

In addition, the Money Market Fund may, to the extent permitted by SEC rule, suspend redemptions prior to the liquidation of the Fund, if the Trustees determine that the deviation between the Fund’ s amortized cost price per share and its current market-based NAV value per share may result in material dilution or other unfair results to investors or existing shareholders.

*The following information replaces similar information for the **Money Market Fund** found on page 76 in the last sentence of the first paragraph in the section titled **Valuation of Portfolio Securities**:*

It is the intention of the Money Market Fund to maintain a stable NAV of \$1.00 per share, although this cannot be assured.

*The following information replaces similar information found on pages 77 and 78 under the **Money Market Fund** heading in the section titled **Valuation of Portfolio Securities**:*

The Money Market Fund’ s portfolio instruments are valued on the basis of amortized cost which involves initially valuing an instrument at its cost and thereafter making a constant amortization to maturity of any discount or premium, regardless of the impact of changes in market interest rates on the market value of the instrument. While this method provides certainty of valuation, it may result in periods in which the value, as determined by amortized cost, is higher or lower than the price the Money Market Fund would receive if it sold the instrument. During periods of declining interest rates, the daily yield on shares of the Money Market Fund computed as described below may tend to be higher than a like computation made by a fund with identical investments utilizing a method of valuation based upon market prices and estimates of market prices for its portfolio instruments. Thus, if the use of amortized cost by the Money Market Fund resulted in a lower aggregate portfolio value on a particular day, a prospective investor in the Money Market Fund would be able to obtain a somewhat higher yield than would result from investment in a fund utilizing market values, and existing investors in the Money Market Fund would receive less investment income. The converse would apply in a period of rising interest rates.

The valuation of the Money Market Fund’ s portfolio instruments based upon their amortized cost and the concomitant maintenance of a stable NAV per share of \$1.00 is permitted in accordance with Rule 2a-7 under the 1940 Act.

The Board has established procedures designed to stabilize, to the extent reasonably possible, the Money Market Fund’ s NAV per share as computed for the purpose of sales and redemptions at \$1.00. Such procedures include periodic review of the Money Market Fund’ s portfolio holdings to determine the extent of any deviation between the NAV of the Money Market Fund calculated by using available market quotations and its NAV calculated using amortized cost, and whether such deviation may result in material dilution or is otherwise unfair to investors or existing shareholders. In the event the Board determines that such a deviation exists, it may take such corrective action as it regards as necessary and appropriate, including: the sale of portfolio instruments prior to maturity in order to realize capital gains or losses or to shorten average portfolio maturity; withholding dividends; redemptions of shares in kind; or establishing a NAV per share by using available market quotations (which would likely differ from the Fund’ s NAV calculated using amortized cost); or suspending redemptions and liquidating the Fund.

---

Since the net income of the Money Market Fund is declared as a dividend each time it is determined, the NAV per share of the Money Market Fund typically remains the same immediately after each determination and dividend declaration as before. Any increase in the value of a shareholder's investment in the Money Market Fund representing the reinvestment of dividend income is reflected by an increase in the number of shares of the Money Market Fund in the shareholder's account, which increase is recorded promptly after the end of each calendar month.

For this purpose the net income of the Money Market Fund (from the time of the immediately preceding determination thereof) consists of all interest income accrued on its portfolio, plus realized gains or minus realized losses, and less all expenses and liabilities chargeable against income. Interest income includes discount earned (including both original issue and market discount) on paper purchased at a discount, less amortization of premium, accrued ratably to the date of maturity. Expenses, including the compensation payable to MassMutual, are accrued each day.

Should the Money Market Fund incur or anticipate any unusual expense, or loss or depreciation which would adversely affect its NAV per share or income for a particular period, the Board would at that time consider whether to adhere to the present dividend policy described above or to revise it in light of the then prevailing circumstances. For example, if the Money Market Fund's NAV per share were reduced, or were anticipated to be reduced, below its otherwise stable NAV of \$1.00 per share, the Board might suspend further dividend payments until the NAV returned to \$1.00. Thus, such expenses or losses or depreciation might result in an investor receiving no dividends for the period during which he held his shares and in his receiving upon redemption a price per share lower than what he paid.
