(1) Evaluation of Securities made on the basis of current offer side evaluation as determined by the Evaluator. The offer side evaluation is greater than the current bid side evaluation of the Securities which is the basis on which Redemption Price per Unit is determined (see Redemption). The aggregate value based on the bid side evaluation on the Initial Date of Deposit was \$989,554.00, which is \$630.00 (approximately 0.06% of the aggregate face amount) lower than the aggregate Cost of Securities to Fund based on the offer side evaluation. Price of Securities was computed on the basis of the offer side evaluation at the Evaluation Time on the business day prior to the Initial Date of Deposit.

All Securities are represented by contracts to purchase these Securities. The contracts to purchase Securities were acquired on April 6, 1994.

DEFINED GOVERNMENT SECURITIES INCOME FUND
Our defined portfolios of U.S. Treasury securities offer investors a simple and

convenient way to participate in the U.S. Treasury market and obtain monthly income while earning an attractive return.

THE CREDIT SAFETY OF U.S. TREASURY SECURITIES

The U.S. Government is obligated to the holders of these securities, such as the Fund, to pay every penny of interest and principal due to them. The Fund itself is not backed by the full faith and credit of the Government, only the securities it holds. The value of the units will fluctuate with changes in market conditions.

INVESTMENT FLEXIBILITY

By utilizing an investment strategy called laddering, the Fund seeks to provide protection against changes in interest rates. Each year beginning in 1995, approximately 20% of principal is returned as securities mature. This way, a portion of your investment will continue to earn higher levels of income if interest rates decline; a portion of your investment will be available each year to be reinvested at higher rates if interest rates rise.

MONTHLY INCOME DISTRIBUTIONS

Although the bonds themselves pay semiannually, the Fund will distribute income monthly. Principal from sales, redemptions and maturities of bonds is distributed as it is received. Interest payments, of course, decrease as principal is returned.

AAA-RATED INVESTMENT QUALITY

Based on the creditworthiness of the U.S. treasury securities in the portfolio, Standard & Poor's has rated units of the Fund AAA, its highest rating. Government backing relates to the Securities in the Fund and not the Fund's Units.

A LIQUID INVESTMENT

Although not legally required to do so, the Sponsors have maintained a secondary market for Defined Asset Funds for over 20 years. You can cash in your units at any time. Your price is based on the market value of the Fund's securities at that time as determined by an independent evaluator.

STATE AND LOCAL TAX EXEMPT

Income from the Fund is exempt from state and local personal income taxes in all states just as though you owned the Treasury Securities directly. Depending on where you live, these exemptions could be very important and could increase the after-tax return you receive.

Information contained herein is subject to completion or amendment. A registration statement relating to the securities of the next Trust in the series of Government Securities Income Fund has been filed with the Securities and Exchange Commission. The securities of that Trust may not be sold nor may offers to buy be accepted prior to the time that registration statement becomes effective. This brochure shall not constitute an offer to sell or the solicitation of an offer to buy nor shall there be any sale of these securities in any State in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such State.

CAPITAL ACCOUNT DISTRIBUTIONS

Distributions from the Capital Account will be made on or about the second business day following the maturity of each Security to Holders of record on the business day immediately preceding the date of the distribution.

</TABLE>

- - - - -

* Estimated Current Return represents annual interest income after estimated annual expenses divided by the maximum public offering price including a 1.25% maximum sales charge. Estimated Long Term Return is the net annual percentage return based on the yield on each underlying Security listed under Portfolio weighted to reflect market value and time to maturity. Estimated Long Term Return is adjusted for estimated expenses and the maximum offering price but not for delays in the Fund's distribution of income. Estimated Current Return shows current annual cash return to investors while Estimated Long Term Return shows the return on Units held to maturity, reflecting maturities, discounts and premiums on underlying Securities. Each figure will vary with purchase price and changes in Fund income after expenses.

** Plus accrued interest.

*** The Sponsors may create additional Units during the offering period of the Fund.

**** During the initial offering period, the Sponsors intend to offer to purchase Units at prices based on the offer side evaluation of the underlying Securities. Thereafter, the Sponsors intend to maintain such a market based on the bid side value of the underlying Securities, which will be equal to the Redemption Price. (See Market for Units.)

THE EFFECT OF VOLUME DISCOUNTS

For larger purchases the sales charge has been reduced. This increases your effective return on a Unit.

To give you an idea of these volume purchase discounts please examine the chart below. This example is based on the public offering price as of the business day prior to the date of the prospectus.

INITIAL OFFERING PERIOD

<TABLE>

<CAPTION>
