CALVERT VP INFLATION PROTECTED PLUS PORTFOLIO

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. The Portfolio's Prospectus and Statement of Additional Information (the "SAI"), both dated April 30, 2012, are incorporated by reference into this Summary Prospectus. You can find the Portfolio's Prospectus, the SAI, and other information about the Portfolio online at www.calvert.com/variable. You can also get this information at no cost by calling 1-800-368-2745 or by sending an e-mail request to Prospectusrequest@calvert.com, or by asking a financial professional who offers shares of the Portfolio.

INVESTMENT OBJECTIVE

The Portfolio seeks to maximize real levels of current income consistent with reasonable investment risk, by investing primarily in inflation adjusted fixed income securities. This objective may be changed by the Portfolio's Board of Directors without shareholder approval.

FEES AND EXPENSES OF THE PORTFOLIO

This table describes the fees and expenses that you may pay if you invest in shares of the Portfolio.

The table and the following example do not reflect fees and charges imposed under the variable annuity contracts and life insurance policies (each a "Policy") through which an investment may be made. If those fees and charges were included, costs would be higher. Please consult the prospectus for your Policy for information regarding those fees and charges.

Shareholder Fees (fees paid directly from your investment)

Maximum sales charge (load) on purchases	None
Maximum deferred sales charge (load)	None

Annual Fund Operating Expenses (expenses that you pay each year as a % of the value of your investment)

Management fees	0.60	%
Other expenses	0.19	%
Total annual fund operating expenses	0.79	%

Example

This example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. The example assumes that:

- you invest \$10,000 in the Portfolio for the time periods indicated;
- your investment has a 5% return each year;
- the Portfolio's operating expenses remain the same; and
- any Calvert expense limitation is in effect for the period indicated in the fee table above.

Although your actual costs may be higher or lower, under these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$81	\$252	\$439	\$978

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities ("turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the "Example", affect the Portfolio's performance. During the most recent fiscal year, the Portfolio's portfolio turnover rate was 38% of its portfolio's average value.

INVESTMENTS, RISKS AND PERFORMANCE

Principal Investment Strategies

The Portfolio seeks to achieve its objective by investing under normal circumstances at least 80% of its net assets (including borrowings for investment purposes) in inflation protected fixed income securities. The Portfolio will provide shareholders with at least 60 days' notice before changing this 80% policy. These securities will normally be U.S. dollar denominated and include securities issued by the U.S. Government, its agencies and instrumentalities, as well as other

entities such as foreign governments or corporations. Inflation protected or adjusted fixed income securities are structured to provide protection against inflation by directly or indirectly adjusting the value of the bond's principal or the interest income paid based (directly or indirectly) on changes in the official inflation measures reported by the U.S. Bureau of Labor Statistics. Foreign inflation protected securities are adjusted using a comparable statistic issued by the respective government.

Up to 20% of the Portfolio's assets may be invested in fixed income securities that are not inflation indexed, including unrated or below investment-grade bonds ("high yield" or "junk" bonds), convertible debt securities, convertible preferred and preferred stocks, or other securities.

The Portfolio generally will not directly purchase common stocks. However, it may retain up to 10% of the value of its total assets in common stocks acquired by conversion of fixed income securities or by exercise of warrants attached thereto. The Portfolio may invest in U.S. Treasury futures contracts, write covered call

SUMMARY PROSPECTUS APRIL 30, 2012 1

options on U.S. Treasury securities and buy or sell options on futures contracts for such securities.

The Portfolio employs an active trading strategy.

Principal Risks

You could lose money on your investment in the Portfolio, or the Portfolio could underperform, because of the risks described below. An investment in the Portfolio is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Bond Market Risk. The market prices of bonds held by the Portfolio may fall.

Credit Risk. The credit quality of fixed-income securities may deteriorate, which could lead to default or bankruptcy of the issuer where the issuer becomes unable to pay its obligations when due.

Management Risk. The individual investments of the Portfolio may not perform as expected, due to credit, political or other risks and the portfolio management practices may not achieve the desired result.

Risk of Investing for Inflation Protection. Inflation protected fixed income securities do not protect against changes in interest rates to the extent such changes are not attributable to inflation.

Interest Rate Risk. A change in interest rates may adversely affect the value of fixed-income securities. When interest rates rise, the value of fixed-income securities will generally fall. Longer-term securities are subject to greater interest rate risk.

Structured Notes. These are derivative investments whose value depends on, or is derived from, the value of an underlying asset. Structured notes may be tied to the performance of individual stocks or to baskets of assets such as commodities. Structured notes are generally corporate debt securities and are subject to similar risks such as credit risk and the loss of principal. Many structured notes are illiquid, and therefore subject to the Portfolio's investment limitation on illiquid investments. Some secondary markets may exist for certain structured notes. A structured note carries the credit rating of its issuer and the Portfolio will only invest in structured notes issued by issuers with investment grade ratings.

Mortgage-Backed and Asset-Backed Securities Risk. The value of investments in mortgage-backed and asset-backed securities is subject to interest rate risk and credit risk. These securities are also subject to the risk that borrowers will prepay the principal on their loans more quickly than expected (prepayment risk) or more slowly than expected (extension risk), which will affect the yield, average life and price of the securities. In addition, faster-than-expected prepayments may cause the Portfolio to invest the prepaid principal in lower yielding securities, and slower-than-expected prepayments may reduce the potential for the Portfolio to invest in higher yielding securities.

Mortgage-Backed Security Risk (Government-Sponsored Enterprises). Debt and mortgage-backed securities issued by government-sponsored enterprises ("GSEs") such as the Federal National Mortgage Association ("FNMA") and the Federal Home Loan Mortgage Corporation ("FHLMC") are neither insured nor guaranteed by the U.S. Treasury and are not backed by the full faith and credit of the U.S. Government. Such securities are only supported by the credit of the GSE. The U.S. government has provided financial support to FNMA and FHLMC, but there can be no assurance that it will support these or other GSEs in the future.

Junk Bond Risk. Investments in junk bonds can involve a substantial risk of loss. Junk bonds are considered to be speculative with respect to the issuer's ability to pay interest and principal. These securities, which are rated below investment grade, have a higher risk of issuer default, are subject to greater price volatility and may be illiquid.

Defaulted Bonds Risk. For bonds in default (rated "D" by Standard & Poor's or the equivalent by another nationally recognized statistical rating organization, there is a significant risk that these bonds will not achieve full recovery.

Unrated security risk. Unrated securities may be less liquid than rated securities determined to be of comparable quality. When the Portfolio purchases unrated securities, it will depend on the Advisor's analysis of credit risk without the assessment of an NRSRO.

Corporate and Taxable Municipal Bond Risk. For corporate and taxable municipal bonds, there is credit risk in addition to the interest rate risk that affects all fixed-income securities.

Foreign Securities Risk. Investing in foreign securities involves additional risks relating to political, social, and economic developments abroad. Other risks result from the differences between the regulations to which U.S. and foreign issuers and markets are subject, and the potential for foreign markets to be less liquid and more volatile than U.S. markets.

Foreign Currency Risk. Securities that trade or are denominated in currencies other than the U.S. dollar may be adversely affected by fluctuations in currency exchange rates. When the U.S. dollar strengthens relative to a foreign currency, the U.S. dollar value of an investment denominated in that currency will typically fall.

Active Trading Strategy Risk. The Portfolio employs an active trading style that can result in higher turnover (exceeding 100%), may translate to higher transaction costs and may increase your tax liability.

Preferred Stock Risk. The market value of preferred stock generally decreases when interest rates rise and is affected by the issuer's ability to make payments on the preferred stock.

Convertible Securities Risk. The value of convertible securities may be affected by changes in interest rates, the creditworthiness of their issuers, and the ability of those issuers to repay principal and to make interest payments.

Futures and Options Risk. Using futures and options may increase the Portfolio's volatility and may involve a small cash investment relative to the magnitude of risk assumed. If changes in a derivative's value do not correspond to changes in the value of the Portfolio's other investments, the Portfolio may not fully benefit from or could lose money on the derivative position. Derivatives

SUMMARY PROSPECTUS APRIL 30, 2012 2

can involve risk of loss if the party who issued the derivative defaults on its obligation. Derivatives may also be less liquid and more difficult to value.

Performance

The following bar chart and table show the Portfolio's annual returns and its long-term performance, which give some indication of the risks of investing in the Portfolio. The bar chart shows how the performance has varied from year to year. The table compares the Portfolio's performance over time with that of an index and an average.

The Portfolio's past performance does not necessarily indicate how the Portfolio will perform in the future. For updated performance information, visit www.calvert.com.

The returns shown do not reflect fees and charges imposed under the variable annuity contracts and life insurance policies through which an investment may be made. If those fees and charges were included, they would reduce these returns.

Calendar Year Total Returns

	Quarter Ended	Total Return	
Best Quarter (of periods shown)	3/31/08	5.13	%
Worst Quarter (of periods shown)	9/30/08	-3.52	%

Average Annual Total Returns (as of 12/31/11)	1 year	5 years	Since Inception (12/28/06))
Calvert VP Inflation Protected Plus Portfolio	10.41	% 6.46	% 6.48	%
Barclays U.S. TIPS Index (reflects no deduction for fees or expenses)	13.56	% 7.95	% 7.94	%
Lipper VA General U.S. Government Funds Average	10.05	% 6.46	% *

PURCHASE AND REDEMPTION OF SHARES

Shares of the Portfolio currently are sold only to participating insurance companies (the “Insurance Companies”) for allocation to their separate accounts to fund benefits under Policies issued by the Insurance Companies. The Insurance Companies redeem shares of the Portfolio to make benefit and surrender payments under the terms of the Policies. Shares in the Portfolio are offered to the Insurance Companies, without sales charge, and redemptions are processed, on any day that the New York Stock Exchange is open. The share price is based on the Portfolio’s net asset value, determined after an Insurance Company receives the premium payment or a surrender request in acceptable form. The Portfolio does not have minimum initial or subsequent investment requirements.

A Policy owner’s interest in the shares of the Portfolio is subject to the terms of the particular Policy that is described in the prospectus for that Policy. If you are considering purchasing a Policy, you should carefully review the prospectus for that Policy.

TAX INFORMATION

As a regulated investment company under the Internal Revenue Code, the Portfolio is not subject to federal income tax, or to federal excise tax, to the extent that it distributes its net investment income and realized capital gains to the separate accounts of the Insurance Companies. The Portfolio intends to distribute its net investment income and realized capital gains to the extent necessary to remain qualified as a regulated investment company.

Since the only shareholders of the Portfolio are the Insurance Companies, no discussion is included here regarding the federal income tax consequences at the Policy owner level. For information concerning the federal tax consequences to you as a purchaser of a Policy, see the prospectus for your Policy.

SUMMARY PROSPECTUS APRIL 30, 2012 **3**

PAYMENTS TO INSURANCE COMPANIES AND THEIR AFFILIATES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for the Policies. The Portfolio and its related companies may make payments to a sponsoring Insurance Company (or its affiliates) for distribution and/or other services. These payments may be a factor that the Insurance Company considers in including the Portfolio as an underlying investment option in the Policy and may create a conflict of interest. The prospectus (or other offering document) for your Policy may contain additional information about these payments.
