FORWARD-LOOKING STATEMENTS

This Quarterly Report on Form 10-Q contains forward-looking information. Forward-looking information includes statements relating to future actions, prospective products, future performance or results of current or anticipated products, sales and marketing efforts, costs and expenses, interest rates, outcome of contingencies, financial condition, results of operations, liquidity, business strategies, cost savings, objectives of management of the Company and other matters. The Private Securities Litigation Reform Act of 1995 provides a “safe harbor” for forward-looking information in order to encourage companies to provide prospective information about themselves without fear of litigation, so long as that information is identified as forward-looking and is accompanied by meaningful cautionary statements identifying important factors that could cause actual results to differ materially from those projected in the information. Forward-looking information may be included in this Quarterly Report on Form 10-Q or may be incorporated by reference from other documents filed with the Securities and Exchange Commission by the Company. You can find many of these statements by looking for words including, for example, “believes,” “expects,” “anticipates,” “estimates” or similar expressions in this Quarterly Report on Form 10-Q or in documents incorporated by reference in this Quarterly Report on Form 10-Q. Except as otherwise required by applicable law, the Company undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information or future events.

The Company has based the forward-looking statements relating to the Company’s operations on management’s current expectations, estimates and projections about the Company and the industry in which it operates. These statements are not guarantees of future performance and involve risks, uncertainties and assumptions that we cannot predict. In particular, we have based many of these forward-looking statements on assumptions about future events that may prove to be inaccurate. Accordingly, the Company’s actual results may differ materially from those contemplated by these forward-looking statements. Any differences could result from a variety of factors, including, but not limited to the following:

- strategies, outlook and growth prospects;
- future plans and potential for future growth;
- liquidity, capital resources and capital expenditures;
- growth in demand for our products;
- economic outlook and industry trends;
- developments of our markets;
- the impact of regulatory initiatives; and
- the strength of our competitors

NAVA RESOURCES, INC.

(An Exploration Stage Company)

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

SEPTEMBER 30, 2011

1. NATURE AND CONTINUANCE OF OPERATIONS

Nava Resources, Inc. (the "Company") was incorporated on July 21, 2005 under the laws of the state of Nevada. The Company's wholly owned subsidiary, Nava Resources, Canada Inc. ("Nava Resources, Canada"), was incorporated in Canada on August 9, 2005. The Company is an Exploration Stage Company. The Company's principal business is the acquisition and exploration of mineral properties. The Company has not yet determined whether its properties contain mineral reserves that are economically recoverable.

Going Concern

These interim consolidated financial statements have been prepared on a going concern basis, which implies the Company will continue to realize its assets and discharge its liabilities in the normal course of business. The Company has not generated revenues since inception and has not paid any dividends and is unlikely to pay dividends or generate earnings in the immediate or foreseeable future. The continuation of the Company as a going concern is dependent upon the continued financial support from its shareholders, the ability of the Company to obtain necessary equity financing to continue operations and to determine the existence, discovery and successful exploitation of economically recoverable reserves in its resource properties, confirmation of the Company interest in the underlying properties, and the attainment of profitable operations. As at September 30, 2011, the Company has accumulated losses of \$197,673 since inception. These interim consolidated financial statements do not include any adjustments to the recoverability and classification of recorded asset amounts and classification of liabilities that might be necessary should the Company be unable to continue as a going concern.

Management of the Company has undertaken steps as part of a plan with the goal of sustaining Company operations for the next twelve months and beyond. These steps include: (a) continuing efforts to raise additional capital and/or other forms of financing; and (b) controlling overhead and expenses. There can be no assurance that any of these efforts will be successful.

2. BASIS OF PRESENTATION

These interim consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles for financial information and with the instructions to Form 10-Q and Item 310(b) of Regulation S. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the three months ended September 30, 2011 are not necessarily indicative of the results that may be expected for any interim period or an entire year. The Company applies the same accounting policies and methods in its interim financial statements as those in the most recent audited annual consolidated financial statements, except as discussed in Note 3 below.

3. RECENTLY ADOPTED ACCOUNTING PRONOUNCEMENTS

The Company has reviewed recently issued accounting standards and plans to adopt those that are applicable to it. It does not expect the adoption of those standards to have a material impact on its financial position, results of operations or cash flows.

NAVA RESOURCES, INC.

(An Exploration Stage Company)

NOTES TO THE INTERIM CONSOLIDATED FINANCIAL STATEMENTS

SEPTEMBER 30, 2011

4. CAPITAL STOCK

The Company is authorized to issue up to 400,000,000 shares of common stock, with a par value of \$0.00001.

5. STOCK OPTIONS

Stock Options

The Company has adopted a Stock Incentive Plan (the "Plan"). The essential elements of the Plan provide that the total number of shares of stock reserved and available for distribution under the plan shall be 10,000,000 shares of common stock of the Company. The Options granted under the Plan shall have a maximum term of five years.

The Company has the following stock options outstanding:

Expiry Date	Exercise Price	Number of Options Outstanding	Number of options Exercisable
November 28, 2014	\$0.01	12,500	12,500
August 31, 2015	\$0.01	250,000	250,000
November 30, 2015	\$0.01	25,000	25,000
		287,500	287,500

6. SUBSEQUENT EVENT

The Company has evaluated subsequent events according to ASC Topic 855 and has determined that there are no events to disclose.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion of our financial condition, changes in financial condition and results of operations for the three months ended September 30, 2011 and 2010 should be read in conjunction with our unaudited interim consolidated financial statements and related notes for the three months ended September 30, 2011 and 2010. The following discussion contains forward-looking statements that involve risks, uncertainties and assumptions. Our actual results may differ materially from those anticipated in these forward-looking statements as a result of many factors, including, but not limited to, those set forth below under the heading "Risk Factors".

Overview of our Business

We are an exploration stage company formed for the purposes of acquiring, exploring and, if warranted and feasible, developing natural resource properties.

Organization

On July 21, 2005, the Company was incorporated under the laws of the State of Nevada for the purpose of conducting mineral exploration activities. We were authorized to issue 400,000,000 shares of common stock, par value \$.001 per share, and initially issued 100,000 shares of common stock to each of Jag Sandhu, our President, Chief Executive Officer and a director, and Johnny Astorino, our Chief Financial Officer. Said issuances were paid at a purchase price of the par value per share. Our wholly owned subsidiary, Nava Resources Canada Inc. ("Nava Canada"), was organized under the Federal laws of Canada on August 9, 2005.

On January 4, 2007, the Company obtained written consent from the shareholders to amend our Articles of Incorporation to change the par value of our common stock from \$0.001 to \$0.00001 per share. On February 28, 2007, the Board of Directors of the Company amended the Articles of Incorporation changing the par value of the Company's common stock.

In March 2007 we issued 19,900,000 shares to each of Messrs. Sandhu and Astorino in consideration for the payment of par value per share. Mr. Astorino subsequently returned 18,000,000 shares to the Company's treasury for cancellation.

On March 20, 2007, we accepted subscriptions for 874,104 shares of our common stock from 37 investors. The shares of common stock were sold at a purchase price of \$0.15 per share, amounting in the aggregate to \$131,116. The offering was made to non-U.S. persons in offshore transactions pursuant to the exemption from registration provided by Regulation S of the Securities Act of 1933, as amended (the "Securities Act").

On April 18, 2007, Mr. Sandhu returned an aggregate of 10,000,000 shares and Mr. Astorino returned an aggregate of 1,000,000 shares of common stock to the Company's treasury for cancellation.

On June 1, 2007, we accepted subscriptions for 352,000 units from 10 investors. The units were sold at a purchase price of \$0.16 per unit, amounting in the aggregate to \$56,320. Each unit was comprised of one share of our common stock and one warrant. Each warrant entitles the warrant holder to purchase one share of common stock at an exercise price of \$0.20 per share. Each warrant expired on June 1, 2009. The offering was made to non-U.S. persons in offshore transactions pursuant to the exemption from registration provided by Regulation S of the Securities Act.

Exploratory Activities

In July 2005 we commenced our mineral exploration activities. On October 10, 2006, the Company entered into an agreement with Jag Sandhu, our President, Chief Executive Officer and Director, pursuant to which the Company obtained an option to acquire a 100% interest in and to the mineral claim located in Lillooett Mining Division called the Noel Creek Claim. On October 2, 2007, the option expired due to the Company not making the required payments as per the option agreement.

On August 28, 2007, Mr. Jag Sandhu, our President and Chief Executive Officer and a director, acquired two claims for a 637.39 hectare (approximately 1575.03 acres) mineral concession on Vancouver Island, in the Province of British Columbia, Canada through British Columbia's online staking service. These mineral claims are known as the North 1 and North 2 Claims. On November 22, 2007, Mr. Sandhu transferred the claims to Nava Canada using British Columbia's Mineral Title Online web site. We intend to conduct exploratory activities with respect to the claims, and if viable mineral deposits are discovered, develop and extract such minerals. In addition, as funding permits, we may acquire additional properties of interest and either abandon our existing properties or enter into agreements to sell all or a portion of those properties.

In October 2007, we engaged a professional mining engineering service and consulting firm, MineStart Management Inc. ("MineStart"), to review the geologic premise and information upon which the claim was staked, and to provide a technical report as to its merit as an exploration prospect, including recommendations on appropriate next steps. The report on the claims, entitled "North 1 and 2 Project - A VMS Investigation" and dated December 7, 2007, describes the mineral claim (tenures, location and access) and the regional, local and property geology. It also includes relevant information on targeted deposit types and mineralization, and recommendations with associated budgets, regarding the initial strategy that should be followed in exploring the claim.

We performed an exploration program on the North 1 and North 2 Claims in August 2008. This program involved a review of property geology based on government compilations, acquisition of relevant air photo coverage and a visit to the property by Jag Sandhu and Don Blackadar. The purpose of this visit was to become familiar with the general layout of the property and related road access, and to prospect and collect rock samples in readily accessible areas. Work was concentrated in the South West corner of the North 2 claim which was accessible just off of the highway, with foot access via an overgrown secondary road leading into the claim.

The North Claim is primarily underlain by felsic to intermediate volcanic and volcanoclastic rocks of the middle to upper Devonian Sicker Group (McLaughlin Ridge Formation), which is prospective for Kuroko-type massive sulphide deposits rich in copper, lead, zinc, gold and silver. Outcrop exposure in the area prospected was minimal due to overburden cover of bolder till with hardpan noted in some rock cuts. A total of 30 rock samples were taken for multi-element geochemical analysis. These samples were primarily float but several samples may have been from small outcrops visible in the road cut. All samples were of intermediate composition (andesite), ranging from fine to medium grained, and relatively massive in texture (weekly foliated in some cases), possibly representing intermediate tuffs with some intrusive equivalents. Samples were sent to Acme Labs in Vancouver, crushed to 200 mesh, and processed by Aqua Regia digestion CCP-MS analysis. Gold was also determined by fire assay fusion by ICP-ES. No significant anomalies were identified in the pathfinder suite. However, the first three samples demonstrate a weakly anomalous Cu-Pb-Zn-Ag-As-Ba signature, which may be of interest.

On October 24, 2010 we allowed our North claim to expire in order to concentrate on our Molly1 claim.

The Molly1 claim was staked by Nava Resources Canada Ltd. on October 20, 2010. The claim comprises 20 contiguous units totaling 424.96 hectares.

The claim is located in the Cowichan Lake area, Vancouver Island, British Columbia, about 30 kilometers west of the city of Duncan and about 5 kilometers northwest of the town of Lake Cowichan. It is accessible via the Meade Lake forestry road from Highway 18, which extends along the north shore of Lake Cowichan from Duncan. The claim is about four kms east and along geologic strike from the North claim.

Molly1 is underlain by the McLaughlin Ridge Formation, which is the uppermost member of the Devonian Age Sicker Group. The Sicker assemblage comprises three successive volcanic formations that are believed to represent an oceanic magmatic arc. The lower two members consist predominantly of mafic volcanics. Rocks of the McLaughlin Ridge Formation are more felsic in composition, with some intermediate assemblages and are thought to represent a more advanced stage of arc development. These rocks are related to major magmatic / volcanic centers, one of which is located in the Duncan / Saltspring Island area. The Sicker Group is exposed in four major structural uplifts in the south half of Vancouver Island: 1) the Buttle Lake Uplift west of Courtenay, 2) the Bedingfield Uplift near Tofino, 3) the Nanoose Uplift north of Nanaimo, and 4) the Cowichan Lake Uplift, substantially the largest of the four, which extends in and arcuate belt between Saltspring Island and Port Alberni, a distance of over 100 km.

The Sicker Group is considered to be highly prospective for Volcanogenic Massive Sulphide (VMS) deposits. Definite or potential VMS deposits have been identified within three of the four structural uplifts. Most known occurrences are Kuroko type deposits, which are rich in copper, lead and zinc, with important amounts of gold and silver. These deposits are hosted by felsic volcanic or volcanoclastic rocks of the McLaughlin Ridge Formation or its equivalent, the Myra Formation in the Buttle Lake area. Important Kuroko-type deposits include the Myra Falls mine in the Buttle Lake Uplift, and several deposits (e.g. Mount Sicker, Lara) at the southeast end of the Cowichan Lake Uplift near Crofton (northeast of Molly1).

The Myra Falls deposit, located at the southeast end of Buttle Lake, has been in production since 1966. To the end of 2005, the deposit yielded 24 million Tonnes grading 1.8% copper, 5.0% zinc, 2 g/T gold and 52 g/T silver. Mineral reserves at December 31, 2009 were 18.5 million Tonnes grading 6.7% zinc. Deposits in the Crofton area are proximal to a major felsic volcanic center. The Mount Sicker deposits (Tyee, Lenora and Richard III) were mined from 1898 to 1909 and again between 1942 and 1952 as the Twin J. The Lara deposit, discovered in the mid-1980s, remains sub-economic, but has significant demonstrated potential (drill indicated resource of 528,839 Tonnes grading 1.01% copper, 1.22% lead, 5.87% zinc, 100.09 g/T silver and 4.74 g/T gold).

Molly1 lies in a panel of Sicker Group rocks, which is parallel to but separate from the assemblage that contains the Sicker and Lara deposits. While no VMS deposits have been discovered in this panel in the Cowichan Lake area and vicinity of the claim, the area is dominated by Sicker volcanics and contains a significant number of documented mineral showings. Many of these showings are in structurally-controlled epigenetic vein systems and some include significant gold and silver values. Significantly, in terms of VMS potential, some showings have a polymetallic signature that is representative of Kuroko-type deposits.

McLaughlin Ridge rocks in the Cowichan Lake area are described on government geological maps as thickly-bedded tuffite and lithic tuffite, feldspar-crystal tuff, lapilli tuff, rhyolite, dacite, laminated tuff and chert. On the Molly1 claim, the assemblage is well-exposed in a logging road cut over a distance of about 1 km. This assemblage consists predominantly of bedded tuffites, which are locally siliceous and cherty. A total of 46 grab samples have been taken across strike in this area and will be analyzed geochemically for a multi-element suite (37 elements) in order to accrue a foundation of geochemical data, and to test for the presence of copper, lead, zinc, silver, gold, barium and arsenic values which are potential indications of Kuroko-type environments.

Nava continued with its program of prospecting and litho-geochemical sampling of Sicker Group rocks in the Lake Cowichan area, Vancouver Island. The Sicker Group is prospective for polymetallic 'Kuroko-type' massive sulphide deposits rich in copper, lead, zinc, silver and gold and is exposed in a number of structural uplifts on Vancouver Island. Two of these uplifts host economically significant Kuroko deposits, including the Myra Falls mine in the Buttle Lake Uplift, and the Mount Sicker (intermittent producer up to 1952) and Lara deposits in the Cowichan Lake Uplift.

Nava's exploration is focused in the southeast end of the Cowichan Lake uplift, which extends in an arcuate, northwest-trending belt over approximately 100 km between Saltspring Island (in the southeast) and Horne Lake in the north.

The Molly1 claim, comprising 20 units (424.96 hectares) was staked in October 2010 to cover outcroppings of the prospective McLaughlin Ridge formation (within the Sicker), approximately 4.5 kilometers along geological strike to the east of the North claim, which was prospected by Nava in 2008; this claim was allowed to lapse in 2010. The Molly1 claim is bounded to the east by the Meade Creek valley, and is accessible via logging roads extending north from the main highway along the steep western slope of the valley.

Exploration on Molly1 during 2010 comprised reconnaissance traverse of roads in the area in late October 2010. Outcroppings of Sicker Group and other rocks are exposed in road cuts over a distance of perhaps 2 kilometers along the main access road. The McLaughlin Ridge Formation is well exposed over a distance of about one kilometer in this area and comprises a relatively uniform section of steeply dipping, banded, medium grey fine grained tuffites and cherty tuffites with occasional quartz veining and local finely disseminated pyrite. Exposures of siltstone and grit representing the much younger Nanaimo Group (Benson Formation) occur at the north end of this section, which is bounded to the south by outcroppings of the Mount Hall Gabbro and intermediate intrusive rocks of the Nitnat Formation.

This section of rocks was prospected over a distance of about one kilometer within the claim boundary, focusing on the McLaughlin Ridge Formation. No visible mineralization, other than occasional minor disseminated pyrite was noted. A total of 46 grab samples were taken at intervals across the section and sent for multi-element geochemical analysis (36 element suite), which included the Kuroko indicator elements copper, lead, zinc, silver, gold, barium, and arsenic. No significant anomalies were indicated in this analysis, though three samples (tuffite) demonstrated weakly anomalous barium concentrations.

History and Geological Setting

Vancouver Island is dominated by rocks of the Wrangellia Terrane, which is interpreted to represent a Paleozoic Island Arc assemblage, accreted to the North American continent about 100 million years ago. Mid-Devonian volcanic rocks of the Sicker Group, representing the basement of this complex, are the oldest rocks on Vancouver Island and are exposed in four major structural uplifts - Buttle Lake, Beddington, Nanoose, and Cowichan Lake. The Molly1 Claim lies toward the southeast end of the Cowichan Lake Uplift, along the north shore of the east end of Cowichan Lake. In the Cowichan Lake Uplift, the Sicker comprises three distinct volcanic / volcanoclastic assemblages - the Duck Lake Formation as the oldest member and overlain by the Nitnat Formation, which in turn is overlain, possibly unconformably, by the McLaughlin Ridge Formation.

Volcanic rocks of the Sicker Group are highly prospective for economically viable volcanogenic massive sulphide (VMS) deposits, which are the primary exploration target on the Molly1 Claim. As a group, these deposits are rich in copper and zinc and also carry significant gold and silver values.

The most significant mineral deposit in the Sicker Group is the Myra Falls mine, a world class deposit located in the Buttle Lake Uplift. Other significant deposits, notably the Lara and Mount Sicker deposits, are located in the southeast part of the Cowichan Lake uplift, several kilometers northeast of the Molly1 Claim and separated from the property by a major geologic fault.

Massive sulphide mineralization was first discovered in the Sicker Group with the Mount Sicker discoveries in the late 1800s. Production was from one main ore body via three separate underground mines (Tyee, Lenora and Richard III), which operated for several years. These mines were subsequently amalgamated and re-operated as the Twin J mine from 1942 to 1952. Production from the Tyee mine (1901 - 09) totaled 5,840,593 kilograms copper and 13,725,069 grams silver, and 762,553 grams gold from 152,668 tonnes mined. The Buttle Lake mine, which has been in operation since 1966, currently produces approximately 1 million cwt of ore per year. Over the 39 years to 2005, the mine yielded 24 million cwt with an average grade of 1.8% copper, 5.0% zinc, 2g/T gold and 52g/T silver. The Lara deposit, discovered in the mid-1980s, contains a drill indicated resource of 528,839 tonnes grading 1.01% copper, 1.22% lead, 5.87% zinc, 100.09 g/T silver and 4.73 g/T gold.

Discovery of the Lara deposit and ongoing interest in the nearby Mount Sicker deposits, all of which are hosted in felsic volcanic rocks of the McLaughlin Ridge formation, stimulated significant interest and exploration activity in the Cowichan uplift during the mid-to late 1980s. During this period the Striker Property, comprising 31 contiguous mineral claims (528 units) and extending along virtually the entire north shore of Cowichan Lake, was explored by Utah Mines. This property is underlain predominantly by the Sicker Group, with Nitnat rocks dominant in the western part of the property and McLaughlin Ridge sediments and volcanics dominant in the east. Work on this property is documented in a number of BC government assessment reports, from which the following descriptions are derived.

McLaughlin Ridge rocks, as mapped, divide grossly into 3 units, dominated by diverse sedimentary lithologies with volcanic members, particularly lower in the sequence. Volcanic rocks are described as interbedded lithic and crystal tuff, cherty dust tuff, chert and minor lapilli tuff. The lower unit consists of fine-grained andesitic lithic crystal tuffs and cherty tuffs with local coarse lapilli beds and dacitic tuff units.

Exploration on the Striker property included airborne geophysics, with ground follow-ups and grid work in selected areas in the eastern part of the property because of the distribution of geophysical and geochemical targets. While massive sulphides were not encountered, encouraging mineralization of various types was noted, including exhalative horizons, which occasionally contain anomalous molybdenum, copper and silver. Significant barium, silver, molybdenum and zinc values are also associated with syndepositional pyrite in argillite units and significant gold-silver-copper-zinc values are associated with several structures. Anomalous silt and heavy metal values (copper-lead-zinc-silver-gold) were also identified. The latest assessment report on the Striker property recommended further, more detailed work in the eastern part of the property including detailed mapping, sampling, trenching and limited drilling.

The Cowichan Lake area generally, has been the subject of mineral exploration since the late 1800s and a large number and variety of mineral showings in the area are documented in B.C. government Minfile records. Massey and Friday (1986) grouped Cowichan area mineral showings into five categories:

1. Volcanogenic gold-bearing massive sulphides (Sicker Group Kuroko deposits).
2. Gold-bearing, pyrite-chalcopyrite-quartz-carbonate veins along shears, which are quite common cutting Sicker Group and Karmutsen Formation sills north of Cowichan Lake.
3. Epithermal gold-silver deposits within Bonanza Group volcanics.
4. Copper skarns developed in limy sediments apparently interbedded with basalts of the Karmutsen formation.
5. Copper-molybdenum quartz veins in granodiorite and adjacent country rock on several properties. Chalcopyrite and pyrite, with or without molybdenite are the principle sulphides and minor sphalerite, galena and arsenopyrite are also reported.

Property and Claim Position

The Molly1 claim was staked by Nava Resources Canada Ltd. on October 20, 2010. The claim comprises 20 contiguous units totaling 424.96 hectares. The Molly1 property is in the Victoria mining division of British Columbia and lies on the north shore of Cowichan lake in southern Vancouver Island about 30km west of the town of Duncan and 10km west of the town of Lake Cowichan. (See location map below.)

Conditions to Retain Title to the Claims

The mineral titles are subject to annual renewal and government permits for specific field work. The claims are valid until their next anniversary date of October 20, 2013. They can be renewed indefinitely by performance and recording of assessment work as defined in the Mineral Act (B.C.) or by payment of cash in lieu of work. Work or cash payment of the equivalent of CAN\$4.00 per hectare or approximately CAN\$1,700 for each of the first, second and third anniversary years, and the equivalent of CAN\$8.00 per hectare for each subsequent anniversary year is required. Contiguous claims may be grouped for purposes of applying the value of work from the site of work to other claims. Failure to perform and record valid exploration work or pay the equivalent sum to the Province of British Columbia on the anniversary dates will result in forfeiture of title to the claim.

Present Condition of the Claims

The Claim was staked on October 20, 2010 by Nava Resources Canada Ltd.. The Claim was staked to acquire a position in the Sicker Group, a sequence of volcanic rocks known to be very prospective for the occurrence of polymetallic volcanogenic massive sulphide deposits (VMS), commonly referred to as Kuroko type deposits.

Our objective is to conduct exploration activities on the Molly1 Claim to assess whether they possess evidence of mineralization sufficient to merit further exploration activities. The Molly1 Claim is without known reserves.

Competitive Conditions

The mineral exploration business is an extremely competitive industry. We are competing with many other exploration companies looking for minerals. We are a very early stage mineral exploration company and a very small participant in the mineral exploration business. Being a junior mineral exploration company, we compete with other companies like ours for financing and joint venture partners. Additionally, we compete for resources such as professional geologists, camp staff, helicopters and mineral exploration supplies.

Government Approvals and Recommendations

We will be required to comply with all regulations defined in the British Columbia Mineral Tenure Act for the Province of British Columbia (the "Act"). The Act sets forth rules for:

- locating claims
- posting claims
- working claims
- reporting work performed

We also have to comply with the British Columbia Mineral Exploration Code which dictates how and where we can explore for minerals. We must comply with these laws to operate our business. Compliance with these rules and regulations will not adversely affect our operations. In order to explore for minerals on our mineral claim we must submit our exploration plan for review. We believe that our exploration plan as described below will be accepted and an exploration permit will be issued to our agent or us. The exploration permit is the only permit or license we will need to explore for precious and base minerals on the mineral claim.

We will be required to obtain additional work permits from the British Columbia Ministry of Energy and Mines for any exploration work that results in a physical disturbance to the land. Accordingly, we may be required to obtain a work permit depending on the complexity and affect on the environment if we proceed beyond the exploration work contemplated by our proposed exploration programs. The time required to obtain a work permit is approximately four weeks. We will incur the expense of our consultants to prepare the required submissions to the Ministry of Energy and Mines. We will be required by the Mining Act to undertake remediation work on any work that results in physical disturbance to the land. The cost of remediation work will vary according to the degree of physical disturbance. No remediation work is anticipated as a result of completion of Stage One and Stage Two of our exploration program.

As mentioned above, we will have to sustain the cost of reclamation and environmental remediation for all exploration and other work undertaken. The amount of reclamation and environmental remediation costs are not known at this time as we do not know the extent of the exploration program that will be undertaken beyond completion of the recommended exploration program. Because there is no information on the size, tenor, or quality of any mineral resource at this time, it is impossible to assess the impact of any capital expenditures on earnings or our competitive position in the event a potential mineral deposit is discovered.

If we enter into substantial exploration, the cost of complying with permit and regulatory environment laws will be greater than in Stages One and Two because the impact on the project area is greater. Permits and regulations will control all aspects of any program if the project continues to that stage because of the potential impact on the environment. We may be required to conduct an environmental review process under the British Columbia Environmental Assessment Act if we determine to proceed with a substantial project. An environmental review is not required under the Environmental Assessment Act to proceed with the recommended Stage One and Two exploration programs on our Molly1 Claim.

Costs and Effects of Compliance with Environmental Laws

We currently have no costs to comply with environmental laws concerning our exploration program.

We will have to sustain the cost of reclamation and environmental remediation for all work undertaken which causes sufficient surface disturbance to necessitate reclamation work. Both reclamation and environmental remediation refer to putting disturbed ground back as close to its original state as possible. Other potential pollution or damage must be cleaned-up and renewed along standard guidelines outlined in the usual permits. Reclamation is the process of bringing the land back to a natural state after completion of exploration activities. Environmental remediation refers to the physical activity of taking steps to remediate, or remedy, any environmental damage caused, i.e. refilling trenches after sampling or cleaning up fuel spills. Our initial programs do not require any reclamation or remediation other than minor clean up and removal of supplies because of minimal disturbance to the ground. The amount of these costs is not known at this time as we do not know the extent of the exploration program we will undertake, beyond completion of the recommended phases. Because there is presently no information on the size, tenor, or quality of any resource or reserve at this time, it is impossible to assess the impact of any capital expenditures on our earnings or competitive position in the event a potentially economic deposit is discovered.

Employees

We currently have no employees other than our officers and directors. We intend to retain the services of geologists, prospectors and consultants on a contract basis to conduct the exploration programs on our mineral claims and to assist with regulatory compliance and preparation of financial statements.

Research and Development Expenditures

We have not incurred any research or development expenditures since our incorporation.

Subsidiaries

Nava Resources Canada Inc. ("Nava Canada") is a 100% owned subsidiary of Nava Resources Inc.

Patents and Trademarks

We do not own, either legally or beneficially, any patent or trademark.

Plan of Operation

Our plan of operation for the next twelve months is to complete the following objectives within the time periods specified, subject to our obtaining any additional funding necessary for the continued exploration of our mineral claims. We have enough funds to complete our Phase One exploration program and possibly Phase Two depending on scope and costs.

1. Since the next anniversary date of the Claims is October 20, 2013 we will need to arrange some exploration work worth approximately \$1,700 or pay the Province of British Columbia \$1,700 in lieu of filing exploration expenses in order to keep the Claims in good standing.
2. We conducted a phase one program of prospecting and lithogeochemical sampling of Sicker Group rocks in the Lake Cowichan area, Vancouver Island in 2010. The Sicker Group is prospective for polymetallic 'Kuroko-type' massive sulphide deposits rich in copper, lead, zinc, silver and gold and is exposed in a number of structural uplifts on Vancouver Island. Two of these uplifts host economically significant Kuroko deposits, including the Myra Falls mine in the Buttle Lake Uplift, and the Mount Sicker (intermittent producer up to 1952) and Lara deposits in the Cowichan Lake Uplift.

Nava's exploration was focused in the southeast end of the Cowichan Lake uplift, which extends in an arcuate, northwest-trending belt over approximately 100 km between Saltspring Island (in the southeast) and Horne Lake in the north.

The Molly1 claim, comprising 20 units (424.96 hectares) was staked in October 2010 to cover outcroppings of the prospective McLaughlin Ridge formation (within the Sicker), approximately 4.5 kilometers along geological strike to the east of the North claim, which was prospected by Nava in 2008; this claim was allowed to lapse in 2010. The Molly1 claim is bounded to the east by the Meade Creek valley, and is accessible via logging roads extending north from the main highway along the steep western slope of the valley.

Exploration on Molly1 during 2010 comprised reconnaissance traverse of roads in the area in late October 2010. Outcroppings of Sicker Group and other rocks are exposed in road cuts over a distance of perhaps 2 kilometers along the main access road. The McLaughlin Ridge Formation is well exposed over a distance of about one kilometer in this area and comprises a relatively uniform section of steeply dipping, banded, medium grey fine grained tuffites and cherty tuffites with occasional quartz veining and local finely disseminated pyrite. Exposures of siltstone and grit representing the much younger Nanaimo Group (Benson Formation) occur at the north end of this section, which is bounded to the south by outcroppings of the Mount Hall Gabbro and intermediate intrusive rocks of the Nitnat Formation.

This section of rocks was prospected over a distance of about one kilometer within the claim boundary, focusing on the McLaughlin Ridge Formation. No visible mineralization, other than occasional minor disseminated pyrite was noted. A total of 46 grab samples were taken at intervals across the section and sent for multi-element geochemical analysis (36 element suite), which included the Kuroko indicator elements copper, lead, zinc, silver, gold, barium, and arsenic. No significant anomalies were indicated in this analysis, though three samples (tuffite) demonstrated weakly anomalous barium concentrations.

3. We will be further analyzing the data received and if warranted conducting further work on the property in spring of 2012. Depending on scope, may include geological mapping, a geochemical survey, trenching, sampling and analysis.

4. In the case that the Phase Two exploration program takes place, we will review its results in May 2012. Further work on the property may be undertaken if justified by the results of Phase Two. A joint venture relationship may be explored at some future point as justified to offset the costs of continued exploration and drilling if warranted.

We may consider entering into a joint venture partnership by linking with a major resource company to provide the required funding to complete exploration beyond Phase Two. We have not undertaken any efforts to locate a joint venture partner at this point. If we enter into a joint venture arrangement, we will assign a percentage of our interest in our mineral claims to the joint venture partner.

5. We will also be evaluating other opportunities that might be brought to our attention.

Results of Operations

	Three months ended September 30, 2011 (Unaudited)	Three months ended September 30, 2010 (Unaudited)	Accumulated from July 21, 2005 (date of inception) to September 30, 2011 (Unaudited)

Cost recovery	-	1,000	1,000
Interest income	5	10	8,130
NET AND COMPREHENSIVE LOSS	\$(3,799)	\$(42,982)	\$(197,673)
BASIC AND DILUTED LOSS PER SHARE	\$(0.00)	\$(0.00)	
WEIGHTED AVERAGE NUMBER OF SHARES OUTSTANDING - BASIC AND DILUTED	12,338,604	12,286,702	

Revenues

We have had no operating revenues since our inception on July 21, 2005 to September 30, 2011. We anticipate that we will not generate any revenues for so long as we are an exploration stage company.

General and Administrative Expenses

Our general and administrative expenses in the three months ended September 30, 2011 decreased to \$3,804 from \$43,992 in the three months ended September 30, 2010, primarily as a result of no stock-based compensation in the current quarter.

Mineral Property Costs

In the three months ended September 30, 2011, we incurred \$nil mineral property costs compared to mineral property costs of \$nil in the three months ended September 30, 2010.

Rent

Our office space is being provided free of charge. They can be no assurance that it will continue to be provided free of charge.

Net Loss

As a result of the above, our net loss for the three months ended September 30, 2011 was \$3,799, as compared to \$42,982 in the three months ended September 30, 2010.

Liquidity and Capital Resources

At September 30, 2011, we had cash of \$55,133 and a working capital of \$39,134. During the 12 month period following the date of this quarterly report, we anticipate that we will not generate any revenue. We believe that we have enough cash on hand to complete our Phase One exploration program and commence a fairly basic Phase Two program. If the results of the Phase One are particularly encouraging, we may wish to raise additional funds for a more in depth Phase Two program starting in February 2012. Additional funds will need to be raised to support work that may be undertaken subsequent to Phase Two.

If additional funds are required, the additional funding will likely come from equity financing from the sale of our common stock or sale of part of our interest in our mineral claims. If we are successful in completing an equity financing, existing shareholders will experience dilution of their interest in our Company. We do not have any financing arranged and we cannot provide investors with any assurance that we will be able to raise sufficient funding from the sale of our common stock to fund our exploration activities. In the absence of such financing, our business will likely fail.

Going Concern

We have not generated any revenues since inception. As of September 30, 2011, the Company had accumulated losses of \$197,673. Our independent auditors included an explanatory paragraph in their report on the accompanying financial statements regarding concerns about our ability to continue as a going concern. Our financial statements contain additional note disclosures describing the circumstances that lead to this disclosure by our independent auditors. Our financial statements do not include any adjustments related to the recoverability or classification of asset-carrying amounts or the amounts and classifications of liabilities that may result should the Company be unable to continue as a going concern.

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements including arrangements that would affect our liquidity, capital resources, market risk support and credit risk support or other benefits.

Critical Accounting Policies

Our financial statements and accompanying notes have been prepared in accordance with United States generally accepted accounting principles and are expressed in U.S. dollars.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

A smaller reporting company, as defined by Item 10 of Regulation S-K, is not required to provide the information required by this item.

Item 4. Controls and Procedures

Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we evaluated the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act")) as of September 30, 2011. Based upon that evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective as of September 30, 2011.

Management report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is defined in Rule 13a-15(f) and 15d-15(f) under the Exchange Act as a process designed by, or under the supervision of, a company's principal executive and principal financial officers and effected by the company's board of directors, management and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Management acknowledges its responsibility for establishing and maintaining adequate internal controls over financial reporting. We are not in compliance with Section 404 of the Sarbanes-Oxley Act of 2002, but intend to commence shortly the system and process of documentation and evaluation needed to comply with Section 404.

This quarterly report does not include an attestation report of the Company's registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by the Company's registered public accounting firm pursuant to temporary rules of the Securities and Exchange Commission that permit the Company to provide only management's report in this quarterly report

There has not been any change in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the quarter ended September 30, 2011 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

PART II - OTHER INFORMATION

Item 1. Legal Proceedings

We currently are not a party to any material legal proceedings and, to our knowledge, no such proceedings are threatened or contemplated.

Item 1A. Risk Factors

There have been no material changes to the risks to our business described in our Annual Report on Form 10-K for the year ended June 30, 2011 filed with the SEC on September 28, 2011.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Unregistered Sales of Equity Securities

None

Purchases of equity securities by the issuer and affiliated purchasers

None.

Item 3. Defaults Upon Senior Securities

None.

Item 4. Submission of Matters to a Vote of Securities Holders

None.

Item 5. Other Information

On October 26, 2009, the Board of Directors of the Company adopted the Nava Resources, Inc. 2009 Stock Incentive Plan (the "Stock Plan") and reserved 10,000,000 shares to be issued under the Stock Plan.

SIGNATURES

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the Company has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

NAVA RESOURCES, INC.

By: /s/ Jag Sandhu

Name: Jag Sandhu

Title: President and Chief Executive Officer

(Principal Executive, Financial and Accounting Officer)

In accordance with the Exchange Act, this report has been signed below by the following persons on behalf of the Registrant and in the capacities and on the dates indicated.

<u>Signature</u>	<u>Title</u>	<u>Date</u>
<u>/s/ Jag Sandhu</u> Jag Sandhu	President, Chief Executive Officer and Director, Principal Executive, Financial and Accounting Officer	October 27, 2011
<u>/s/ Don Blackadar</u> Don Blackadar	Director	October 27, 2011

**CERTIFICATION OF CHIEF EXECUTIVE OFFICER
PURSUANT TO SECTION 302(a) OF THE SARBANES-OXLEY ACT OF 2002**

I, Jag Sandhu, certify that:

1. I have reviewed this report on Form 10-Q of the Company for the quarterly period ended September 30, 2011;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d. Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's fourth fiscal quarter that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Exhibit 32.1

**CERTIFICATION PURSUANT TO
18 U.S.C. SECTION 1350
AS ADOPTED PURSUANT TO**

SECTION 906 OF THE SARBANES-OXLEY ACT OF 2002

The undersigned, Jag Sandhu, President and Chief Executive Officer and Principal Financial & Accounting Officer and a Director of Nava Resources, Inc. (the "Company"), certify, under the standards set forth and solely for the purposes of 18 U.S.C. 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, that, to the best of my knowledge, the Quarterly Report on Form 10-Q of the Company for the Quarter ended September 30, 2011 fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934 and information contained in that Form 10-Q fairly presents, in all material respects, the financial condition and results of operations of the Company.

Basis of Presentation

2. BASIS OF PRESENTATION

These interim consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles for financial information and with the instructions to Form 10-Q and Item 310(b) of Regulation S. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the three months ended September 30, 2011 are not necessarily indicative of the results that may be expected for any interim period or an entire year. The Company applies the same accounting policies and methods in its interim financial statements as those in the most recent audited annual consolidated financial statements, except as discussed in Note 3 below.

5. STOCK OPTIONS

Stock Options

The Company has adopted a Stock Incentive Plan (the "Plan"). The essential elements of the Plan provide that the total number of shares of stock reserved and available for distribution under the plan shall be 10,000,000 shares of common stock of the Company. The Options granted under the Plan shall have a maximum term of five years.

The Company has the following stock options outstanding:

Expiry Date	Exercise Price	Number of Options Outstanding	Number of options Exercisable
November 28, 2014	\$ 0.01	12,500	12,500
August 31, 2015	\$ 0.01	250,000	250,000

Nature and Continuance of Operations

**3 Months Ended
Sep. 30, 2011**

Notes to Financial Statements

Nature and Continuance of Operations

1. NATURE AND CONTINUANCE OF OPERATIONS

Nava Resources, Inc. (the "Company") was incorporated on July 21, 2005 under the laws of the state of Nevada. The Company's wholly owned subsidiary, Nava Resources, Canada Inc. ("Nava Resources, Canada"), was incorporated in Canada on August 9, 2005. The Company is an Exploration Stage Company. The Company's principal business is the acquisition and exploration of mineral properties. The Company has not yet determined whether its properties contain mineral reserves that are economically recoverable.

Going Concern

These interim consolidated financial statements have been prepared on a going concern basis, which implies the Company will continue to realize its assets and discharge its liabilities in the normal course of business. The Company has not generated revenues since inception and has not paid any dividends and is unlikely to pay dividends or generate earnings in the immediate or foreseeable future. The continuation of the Company as a going concern is dependent upon the continued financial support from its shareholders, the ability of the Company to obtain necessary equity financing to continue operations and to determine the existence, discovery and successful exploitation of economically recoverable reserves in its resource properties, confirmation of the Company interest in the underlying properties, and the attainment of profitable operations. As at September 30, 2011, the Company has accumulated losses of \$197,673 since inception. These interim consolidated financial statements do not include any adjustments to the recoverability and classification of recorded asset amounts and classification of liabilities that might be necessary should the Company be unable to continue as a going concern.

Management of the Company has undertaken steps as part of a plan with the goal of sustaining Company operations for the next twelve months and beyond. These steps include: (a) continuing efforts to raise additional capital and/or other forms of financing; and (b) controlling overhead and expenses. There can be no assurance that any of these efforts will be successful.
