News Release Q3 F2005 Results - Unaudited

Quarter Ended 31 March 2005

as a whole, attributable gold produced was over 5 per cent higher than the corresponding period in the prior year with unit costs 4 per cent lower. The benefits of Project 100 and Project Beyersburg continue to be realized as South African unit operating costs again decreased quarter on quarter, the third in a row. Gold Fields is firmly on track to meet its stated rand copper per kilogram target of R70,000 for the South African operations and this target was in fact exceeded in the March month.

GOLD FIELDS

The increase in production was mainly due to a 45 per cent increase at St Ives, as the old and new mill operated in parallel for the whole quarter, and due to the full benefit being realised of the new Tarkwa mill in the March quarter. The old mill at St Ives operated throughout the quarter to utilise the available stockpile built up over the previous quarters and as a back up for the new mill as production increased towards design capacity.

GOLD FIELDS

... 2006 was disclosed
R164 million of this reduction was accounted for in earnings as referred to above with the balance of the reduction of R22 million debited to the Mvela loan as this element of the interest rate swap is hedge accounted. This amount is included in earnings on a pro-rata basis as the loan is repaid. In addition, the accrued benefit of the interest rate swap for the March quarter was R22 million which will be realised in cash at the date of the next half yearly interest payment to Mvela. Year to date benefit from the interest rate swap amounts to R76 million. A further benefit of R21 million has been locked in for the three-month

Operating Profit for the period is a composite of a decrease of R22.4 million (US\$36 million) for W06 approved (US\$28 million), as a consequence of the lower rand gold price and the marginally lower gold production.

GOLD FIELDS

The following table provides a summary of the development levels achieved at the South African operations as such that flexibility is expected to improve in the quarters to come.

GOLD FIELDS

International Operations

Underground yields at Beatrix North and South increased from 4.7 grams per ton in the December quarter to 5.2 grams per ton in the March quarter. At Beatrix North and South, underground yields increased from 4.5 grams per ton to 4.7 grams per ton in the March quarter due to the elimination of low grade, uneconomical volumes. At Beatrix West (previously named 4 shaft), underground yield increased from 5.8 grams per ton to 7.4 grams per ton, due to a shift in the mining mix into zone 5. However, stoping volumes at West were 10 per cent lower quarter on quarter as the ongoing logistical and remedial work programme was accelerated. The majority of the ventilation system change-over and internal ore pass work to assist mining from Zone 5 was completed during the quarter. It is anticipated that the remaining work on the logistics will be completed during the June quarter. The stoping and development build-up at 3 shaft in the North section continues to be in line with expectations.

...and the opportunity to be involved in the design and implementation of the programme.

...the new plant is optimised and the old more expensive plant is taken off line and further benefits from cost optimisation at the underground mines are realised.

Due to the cost saving initiatives implemented over this period, the inflation wage increases and despite the 2 per cent increase in production referred to above. This was due to the cost saving initiatives implemented over this period.

...the project commodity prices such as fuel, steel and copper, repricing of equipment and rapid escalation in the cost of services required to execute such projects. The advanced EIA process had also led to growth in costs associated with environmental protection.

Environmental Impact Statement
Environmental Impact Statement
Environmental Impact Statement
The public interest grounds include an adverse effect on employment, communities and the mining sector.

Income Statement

Income Statement

Financial Derivatives

On 1st January 2005, the company entered into a contract to purchase 100 million shares of ABC Ltd. The contract is for a period of 3 months. The company has a settlement gain of R21 million. The settlement gain is calculated as follows: (R21 million - R10 million) = R11 million. The settlement gain is locked in for the three-month period to the end of June 2005. Including this gain, the settlement gain up until the end of June amounts to R97 million.
