SINGLE-SHOT OUTBREAK VACCINE PROVIDES FULL PROTECTION AGAINST EBOLA ACCORDING TO  
RESULTS OF NEW ANIMAL STUDIES

LEIDEN, THE NETHERLANDS, APRIL 29, 2005 - Dutch biotechnology company Crucell  
N.V. (Euronext, Nasdaq: CRXL) today reported new results from its Ebola vaccine

studies. The studies, conducted together with the Vaccine Research Center (VRC) of the US National Institutes of Health (NIH) and the US Army Research Institute of Infectious Diseases (USAMRIID), confirm previously published results showing that a single shot of the vaccine protected monkeys completely against a lethal Ebola challenge. These new results utilized vectors developed with Crucell's adenoviral vector and PER.C6[R] cell line technology, and show protection at lower doses than previously reported.

The results of the studies were detailed by Dr Nancy Sullivan, head of the VRC's Biodefense Research Section, at a scientific meeting held yesterday at USAMRIID in Fort Detrick, Maryland.

"The timely execution of a series of complex vaccine studies with our Ebola vaccine proves the viability and agility of public-private partnerships such as that between Crucell and the VRC," said Crucell's Chief Scientific Officer, Dr Jaap Goudsmit. "The combination of the VRC's Ebola know-how, USAMRIID's ability to perform Ebola-challenge studies and Crucell's vaccine technology was the key to the current success. It augurs well for the field of biodefense, and for future responses to potential infectious disease outbreaks such as the current Marburg crisis."

Crucell recently secured an exclusive license to patents of the NIH for the development and commercialisation of recombinant vaccines against Ebola.

#### ABOUT EBOLA

The Ebola virus is one of the few viruses capable of causing hemorrhagic fever, a severe, often-fatal disease in humans characterised by high fever and massive internal bleeding. Other hemorrhagic fevers include Marburg and Lassa. One of the most lethal of all viral diseases, Ebola causes death in 50% to 80% of all cases. Ebola outbreaks occur regularly in tropical Africa, affecting both human and great ape populations. Since the Ebola virus was first recognized, approximately 2,000 cases with over 1,200 deaths have been reported. Ebola usually appears in sporadic outbreaks, and spreads within a health-care setting. Because of the high disease-related mortality rates and lack of any vaccine or therapy, the Ebola virus is on the Centers for Disease Control (CDC), National Institute of Allergy and Infectious Diseases (NIAID) and U.S. Department of Defense Category "A" list of bioterror agents, together with smallpox and anthrax.

#### ABOUT CRUCCELL-VRC PARTNERSHIP

Crucell has entered a Cooperative Research and Development Agreement (CRADA) with the Vaccine Research Center (VRC) of the National Institutes of Health (NIH) in the US to jointly develop, test, and manufacture an adenovirus-based Ebola vaccine. Under the terms of the agreement, Crucell has an option for exclusive worldwide commercialization rights to the Ebola vaccine resulting from this collaboration. In August 2002, the CRADA was extended to cover vaccines against Marburg and Lassa infections. In March 2005, Crucell secured an exclusive license to certain patents of the NIH for the development and commercialization of recombinant vaccines against Ebola, and a US\$ 21.4 million manufacturing contract was signed with the NIH in April 2005, under which Crucell will manufacture its Ebola vaccine for clinical trials in humans.

## ABOUT CRUCELL

Crucell N.V. is a biotechnology company focused on developing vaccines and antibodies that prevent and treat infectious diseases, including Ebola, influenza, malaria, West Nile virus and rabies. The company's development programs include collaborations with Sanofi Pasteur for influenza vaccines, the U.S. National Institutes of Health for Ebola and malaria vaccines, and GlaxoSmithKline (GSK), Walter Reed Army Institute of Research and New York University for a malaria vaccine. Crucell's products are based on its innovative PER.C6[R] technology, which offers a safer, more efficient way to produce biopharmaceuticals. The company licenses its PER.C6[R] technology to the biopharmaceutical industry on a mostly non-exclusive basis. Licensees and partners include DSM Biologics, GSK, Centocor/J&J and Merck & Co., Inc. Crucell is headquartered in Leiden, The Netherlands, and is listed on the Euronext and NASDAQ stock exchanges (ticker symbol CRXL).
