*Futures contracts are valued at the unrealized depreciation on the instrument.

For the period ended August 31, 2019, there were transfers between Level 1 and Level 2 assets and liabilities. The primary reason for changes in the classifications between Levels 1 and 2 occurs when foreign equity securities are fair valued using other observable market-based inputs in place of the closing exchange price due to events occurring after the close of the exchange or market on which the investment is principally traded.

For the period ended August 31, 2019, there were no transfers between Level 2 and Level 3 assets and liabilities.

Amounts designated as "–" are either $0 or have been rounded to $0.

For information on the Fund' s policy regarding valuation of investments and other significant accounting policies, please refer to the Fund' s most recent semi-annual and annual financial statements.

For information regarding the Fund’ s policy regarding valuation of investments and other significant accounting policies, please refer to the Fund’ s most recent semi-annual and annual financial statements.

Credit Default Swaps

The Fund enters into credit default swaps to simulate long and short bond positions that are either unavailable or considered to be less attractively priced in the bond market. The Fund uses these swaps to reduce risk where the Fund has exposure to the issuer, or to take an active long or short position with respect to the likelihood of an event of default. The reference obligation of the swap can be a single issuer, a ‘‘basket’’ of issuers, or an index. The underlying referenced assets are corporate debt, sovereign debt and asset backed securities.

The buyer of a credit default swap is generally obligated to pay the seller a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event for corporate or sovereign reference obligations means bankruptcy, failure to pay, obligation acceleration, repudiation/ moratorium or restructuring. For credit default swaps on asset-backed securities, a credit event may be triggered by events such as failure to pay principal, maturity extension, rating downgrade or write-down. If a credit event occurs, the seller typically must pay the contingent payment to the buyer, which is typically the par value (full notional value) of the reference obligation, though the actual payment may be mitigated by terms of the International Swaps and Derivative Agreement (‘‘ISDA’’), allowing for netting arrangements and collateral. After a credit event occurs, this amount may be reduced by anticipated recovery rates, segregated collateral and netting arrangements that may incorporate multiple transactions with a given counterparty.

The contingent payment may be a cash settlement or a physical delivery of the reference obligation in return for payment of the face amount of the obligation. If the Fund is a buyer and no credit event occurs, the Fund may lose its investment and recover nothing. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value. As a seller, the Buyer receives a fixed rate of income throughout the term of the contract, which typically is between one month and five years, provided that no credit event occurs. If a credit event occurs, the seller may pay the buyer the full notional value of the reference obligation. As of August 31, 2019, the Fund is the seller (‘‘providing protection’’) on a total notional amount of $171.2 million. The notional amounts of the swaps are not recorded in the financial statements; however the notional amount does approximate

Recourse provisions with third parties to recover any amounts paid under the credit derivative (including any purchased credit protection)1	–	–	–	–	–
Collateral held by the Fund can obtain upon occurrence of triggering event	–	–	–	–	–

1 Potential recoveries would include purchased credit derivatives to the extent they offset written credit derivatives which have an identical underlying, or a netting arrangement or credit support annex with the counterparty. There may be other potential recoveries from recourse provisions where agreements cover multiple derivative arrangements but those amounts have not been included.

MAXIMUM POTENTIAL AMOUNT OF FUTURE PAYMENTS BY CONTRACT TERM						
CORE FIXED INCOME FUND	0-6 MONTHS	6-12 MONTHS	1-5 YEARS	5-10 YEARS	> 10 YEARS	Total
Current credit spread* on underlying (in basis points)						
0-100	$–	$–	$171,180,000	$–	$–	$171,180,000
101-200	–	–	–	–	–	–
> than 200	–	–	–	–	–	–
Total	$–	$–	$171,180,000	$–	$–	$171,180,000

* The credit spread on the underlying asset is generally indicative of the current status of the underlying risk of the Fund having to perform. The spread also reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into a contract. Higher credit spreads with a shorter contract term is indicative of a higher likelihood of performance by the Fund.

Credit Default Swaps

The Fund enters into credit default swaps to simulate long and short bond positions that are either unavailable or considered to be less attractively priced in the bond market. The Fund uses these swaps to reduce risk where the Fund has exposure to the issuer, or to take an active long or short position with respect to the likelihood of an event of default. The reference obligation of the swap can be a single issuer, a ‘‘basket’’ of issuers, or an index. The underlying referenced assets are corporate debt, sovereign debt and asset backed securities.

The buyer of a credit default swap is generally obligated to pay the seller a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event for corporate or sovereign reference obligations means bankruptcy, failure to pay, obligation acceleration, repudiation/ moratorium or restructuring. For credit default swaps on asset-backed securities, a credit event may be triggered by events such as failure to pay principal, maturity extension, rating downgrade or write-down. If a credit event occurs, the seller typically must pay the contingent payment to the buyer, which is typically the par value (full notional value) of the reference obligation, though the actual payment may be mitigated by terms of the International Swaps and Derivative Agreement (‘‘ISDA’’), allowing for netting arrangements and collateral. After a credit event occurs, this amount may be reduced by anticipated recovery rates, segregated collateral and netting arrangements that may incorporate multiple transactions with a given counterparty.

The contingent payment may be a cash settlement or a physical delivery of the reference obligation in return for payment of the face amount of the obligation. If the Fund is a buyer and no credit event occurs, the Fund may lose its investment and recover nothing. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value. As a seller, the Buyer receives a fixed rate of income throughout the term of the contract, which typically is between one month and five years, provided that no credit event occurs. If a credit event occurs, the seller may pay the buyer the full notional value of the reference obligation. As of August 31, 2019, the Fund is the seller (‘‘providing protection’’) on a total notional amount of $6.2 million. The notional amounts of the swaps are not recorded in the financial statements; however the notional amount does approximate the maximum potential amount of future payments that the Fund could be required to make if the Fund were the seller of protection and a credit event were to occur. Those credit default swaps for which the Fund is providing protection at balance sheet date are summarized as follows:

1 Potential recoveries would include purchased credit derivatives to the extent they offset written credit derivatives which have an identical underlying, or a netting arrangement or credit support annex with the counterparty. There may be other potential recoveries from recourse provisions where agreements cover multiple derivative arrangements but those amounts have not been included.

Total	$3,400,000	$–	$2,768,900	$–	$–	$6,168,900

* The credit spread on the underlying asset is generally indicative of the current status of the underlying risk of the Fund having to perform. The spread also reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into a contract. Higher credit spreads with a shorter contract term is indicative of a higher likelihood of performance by the Fund.

Credit Default Swaps

The Fund enters into credit default swaps to simulate long and short bond positions that are either unavailable or considered to be less attractively priced in the bond market. The Fund uses these swaps to reduce risk where the Fund has exposure to the issuer, or to take an active long or short position with respect to the likelihood of an event of default. The reference obligation of the swap can be a single issuer, a ‘‘basket’’ of issuers, or an index. The underlying referenced assets are corporate debt, sovereign debt and asset backed securities.

The buyer of a credit default swap is generally obligated to pay the seller a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event for corporate or sovereign reference obligations means bankruptcy, failure to pay, obligation acceleration, repudiation/ moratorium or restructuring. For credit default swaps on asset-backed securities, a credit event may be triggered by events such as failure to pay principal, maturity extension, rating downgrade or write-down. If a credit event occurs, the seller typically must pay the contingent payment to the buyer, which is typically the par value (full notional value) of the reference obligation, though the actual payment may be mitigated by terms of the International Swaps and Derivative Agreement (‘‘ISDA’’), allowing for netting arrangements and collateral. After a credit event occurs, this amount may be reduced by anticipated recovery rates, segregated collateral and netting arrangements that may incorporate multiple transactions with a given counterparty.

The contingent payment may be a cash settlement or a physical delivery of the reference obligation in return for payment of the face amount of the obligation. If the Fund is a buyer and no credit event occurs, the Fund may lose its investment and recover nothing. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value. As a seller, the Buyer receives a fixed rate of income throughout the term of the contract, which typically is between one month and five years, provided that no credit event occurs. If a credit event occurs, the seller may pay the buyer the full notional value of the reference obligation. As of August 31, 2019, the Fund is the seller (‘‘providing protection’’) on a total notional amount of $19.7 million. The notional amounts of the swaps are not recorded in the financial statements; however the notional amount does approximate the maximum potential amount of future payments that the Fund could be required to make if the Fund were the seller of protection and a credit event were to occur. Those credit default swaps for which the Fund is providing protection at balance sheet date are summarized as follows:

MULTI-ASSET REAL RETURN FUND
WRITTEN CREDIT DERIVATIVE CONTRACTS

	SINGLE NAME CDS		CDS ON AN INDEX		
REFERENCE ASSET	CORP US$	SOVERIGN US$	ABS US$	CORP US$	Total
Fair value of written credit derivatives	$–	$–	$(1,771,062)	$–	$(1,771,062)
Maximum potential amount of future payments	–	–	19,700,000	–	19,700,000
Recourse provisions with third parties to recover any amounts paid under the credit derivative (including any purchased credit protection)1	–	–	–	–	–
Collateral held by the Fund can obtain upon occurrence of triggering event	–	–	–	–	–

1 Potential recoveries would include purchased credit derivatives to the extent they offset written credit derivatives which have an identical underlying, or a netting arrangement or credit support annex with the counterparty. There may be other potential recoveries from recourse provisions where agreements cover multiple derivative arrangements but those amounts have not been included.

MAXIMUM POTENTIAL AMOUNT OF FUTURE PAYMENTS BY CONTRACT TERM

MULTI-ASSET REAL RETURN FUND	0-6 MONTHS	6-12 MONTHS	1-5 YEARS	5-10 YEARS	> 10 YEARS	Total
Current credit spread* on underlying (in basis points)						
0-100	$–	$–	$–	$–	$–	$–
101-200	–	–	–	–	–	–
201-300	–	–	–	–	1,125,000	1,125,000
301-400	–	–	–	–	–	–
> than 400	–	–	–	–	18,575,000	18,575,000
Total	$–	$–	$–	$–	$19,700,000	$19,700,000

* The credit spread on the underlying asset is generally indicative of the current status of the underlying risk of the Fund having to perform. The spread also reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into a contract. Higher credit spreads with a shorter contract term is indicative of a higher likelihood of performance by the Fund.
